Clear Tomato Soup.—Twenty large tomatoes, four quarts of water, six onions, five green peppers, one cupful of washed rice, one faget of soup herbs. Chop the tomatoes fine and then add the vegetables, rice and water. Cook until it can be rubbed through a sieve. Season with paprika and salt and four teaspoonfuls of finely chopped parsley. This amount may be doubled if desired. Fill into sterilized jars. Place the rubber and lid in position and partially tighten them. Process in a hot water bath for one hour after the water starts boiling. Remove and fasten the lids securely, test for leaks, then store in a cool, dry place.

Kidney Stew.—Cut the kidneys into small pieces rejecting tubes and hard portions. Blanch and then cook until tender in sufficient water to cover, adding two onions, finely minced. When tender thicken the gravy slightly with two tablespoonfuls of flour. Add one tablespoonful of flour. Add one tablespoonful of finely minced parsley. Fill into sterilized pint jars and place the rubber and lid in position, then partially tighten. Place in a hot water bath and process for two one-forth hours after the water starts boiling. Remove from the bath, fasten the tops securely and then test for leaks. Store in a cool, dry place. Sheep or pig kidneys may be cooked in the same manner and they will be found to be delicious for luncheon on a cold or stormy day by simply heating and serving in a border of mashed potatoes.

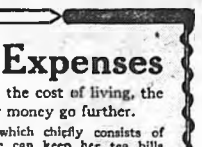
Unprofitable.

Lott—One never loses anything by keeping an engagement punctually.

Scott—Except half an hour's time waiting for the other fellow.

American troops will go into action with long and sharp knives in their kuppings. Now listen to the Germans howl about uncivilized warfare.

Every small child should be taught to eat vegetables.



Christianity wants nothing so much in the world as sonny people, and the old are hungrier for love than for bread. The Oil of Joy is very cheap, and if you can help the poor with a garment of praise, it will be better for them than blankets.—Henry Drummond.

Reducing Expenses

The war has so increased the cost of living, the housewife must make her money go further.

By using Red Rose Tea, which chiefly consists of strong, rich Assam teas, she can keep her tea bills down. The rich Assam strength requires less tea in the pot—and there's only one tea with the rich Red Rose flavor!

Kept Good by the Sealed Package

IMPROVING LOT OF THE BLIND.

Many Reforms Are Under Way in Great Britain.

A great improvement is being made by Great Britain in her methods of caring for the blind. This not only applies to the care of blinded soldiers but to all classes of sightless persons throughout England and Wales, Scotland and Ireland.

More than three years ago a committee was appointed by Herbert Samuel, then president of the Local Government Board, to study the situation of the blind and recommend methods for improving their training and employment.

In the first place it was found that the Government should establish a central control organization for all existing agencies of voluntary help, which could be far better utilized if centrally controlled. It is proposed to set up a separate department in the Ministry of Health which will be devoted exclusively to the general care and supervision of the blind.

The crux of Britain's problem is the inadequacy of workshops, which the committee recommends should be doubled, first by extension of the present shops and second by the construction of new and modern establishments. Even the sale of the handiwork of blind persons has been neglected, and a plan of co-operative selling is to be formed, augmented by a co-operative plan of buying and distributing raw material.

At present there are not sufficient funds available, and in due time further grants from the Government are to be placed at the disposal of the central authority.

The employment of blind teachers in the elementary schools is to be effected wherever possible on account of their adaptability to such an occupation and also because it is necessary to give preference to blinded teachers over those with sight or partial sight. A definite number of blind children is to be started in order to establish a careful system of following up each case through the medium of paid visitors. Wherever a blind person enters upon a professional life the Government intends to see that there is no lack of financial assistance at the start.

THE BEST THING FOR DYSPEPSIA

WHY PEPSIN, PANCREATIN, ETC., SO FREQUENTLY FAIL.

An international specialist whose articles on stomach trouble have been printed in nearly every language, recently stated that to treat the average case of stomach trouble indigestion, dyspepsia, etc., by doctoring the stomach, killing the pain with opiates, or by the use of artificial aids to digestion such as pepsin and pancreatin, was just as foolish and useless as to attempt to put out a fire by throwing water on the smoke, instead of the fire. He claims, and facts seem to justify his claim, that nearly nine-tenths of all stomach trouble is due to acidity and food fermentation, and that the only way in which to secure permanent relief is to get rid of the cause, i.e., to neutralize the acid and stop the fermentation. For this purpose he strongly recommends the plan now generally adopted throughout Europe of taking a teaspoonful of ordinary bisurated magnesia in a little water immediately after eating or whenever pain is felt. This immediately neutralizes the acid stops the fermentation and permits the stomach to do its work in a normal manner and thus by removing the cause enables nature to quickly restore the inflamed stomach lining to its perfectly healthy natural condition. For the convenience of travellers it may be noted that most druggists are now able to supply bisurated magnesia in 5 grain tablets, 2 or 3 of which will almost instantly relieve the most violent attacks of indigestion.

Argentina has built near Bahia Blanca the largest drydock in South America, capable of handling the Dreadnoughts of its navy.

Chinese raise stags for their horns, which are cut off when soft and used in the manufacture of native medicines.

If porcelain baking dishes become discolored on the inside, fill them with buttermilk and let stand for a day or so. The acid in the milk will remove the stains.

Your Problems

Conducted for Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

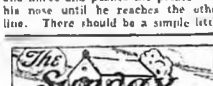
Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Reader:—1. "Anzac" stands for the initial letters of "Australia (and) New Zealand Army Corps." The name was first coined at the Dardanelles. It has no reference to Canada, for there were no Canadian troops, just the Army Medical Corps, at the Dardanelles. 2. To remove paint from clothing, saturate the spots two or three times with equal parts of ammonia and turpentine, and then wash out in soap suds. 3. Nothing whitens the hands so effectively as rubbing a slice of lemon on them once or twice a day. This is also a good way to remove stains from the fingers.

Worker:—To decorate a table for a Red Cross luncheon, instead of a tablecloth use "runners" of heavy white stuff which can afterward be made into nurses' uniforms. At intervals down the table arrange large crosses of red paper. In between, you might place measuring glasses, filled with red and white flowers. Bonbons may be in the shape of pellets and placed in pill boxes, which mortars might hold salted nuts and olives. Instead of napkins, use squares of cheesecloth, folded bandage fashion; these may be saved, washed and sterilized and used for covers for medicine glasses.

One of the Girls:—For your Hallowe'en party:

Begin with the One-Yard Dash. Measure off one yard on the carpet, give each boy a potato, which must be laid on a line. At a given signal each contestant gets down on hands and knees and pushes the potato with his nose until he reaches the other line. There should be a simple little prize for the winner.



The Hurdle Race is for both boys and girls. Each person is given six needles and a spool of thread, and the one who first threads them all wins the contest.

Next comes the Standing High Jump. Hang three doughnuts in a doorway, about four inches higher than the mouths of the contestants. Tie their hands behind them and see who first bites a doughnut.

For a Drinking Race each player is given a half-glassful of water and a spoon. The water must be consumed a spoonful at a time, and the one who finishes first is the winner. If any is spilled, that contestant is barred out.

The Bun Race is great fun. A clothes-line is stretched across the room, and from it are hung sugar buns at a height just reaching each player's mouth. The players stand in line with hands behind them, and at a given signal begin to eat the buns. The bobbing of the line makes this very difficult.

Last comes the Rainy Day Race. Each contestant is given a shoe-box containing a pair of over-shoes, and tied with string. A closed umbrella is also handed to each. When the starter counts three the boxes must be untied, the over-shoes put on, and the umbrellas opened. The contestants then walk across the room as rapidly as possible to a set line, remove the over-shoes, replace them in the boxes, tie the boxes, and close the umbrellas before they walk to their starting place. The one who arrives there first wins.

INTERNATIONAL LESSON
OCTOBER 14.

Lesson II. Returning From Captivity —Ezra 1. 1-11. Golden Text—Psa. 126. 3.

Verses 1-4 contain the proclamation of Cyrus. Cyrus king of Persia—Cyrus began his career as king of Anshan, a small district of Elam to the east of Babylonia. Within a relatively short time he conquered the whole of western Asia. One of his most important early conquests was Persia; hence he is generally known as king of Persia. First year—As king of Babylon; in other words, in B. C. 538 or 537. Jeremiah—The reference is to Jer. 25. 12, where the promise is made that after seventy years the power of Babylon was to be destroyed, which would result in the liberation of the Jews. Since Jeremiah's message is dated about B. C. 604 the later Jews might well accept the return of 537 a fulfillment of Jeremiah's prediction. The primary interest of the author is in the rebuilding of the temple. Jehovah stirred up—It is only natural that a Jewish writer should trace the impulse which prompted the proclamation to divine suggestion. Cyrus himself asserts that his policies at kindliness and generosity were inspired by Marduk the god of Babylon. Proclamation—Ezra 6. 3-5 contains a more original form of the decree of Cyrus. Jehovah . . . given me—There is no indication in any of the inscriptions of Cyrus that he was a worshipper of Jehovah. The glorification of Jehovah here may be due to a later working over of the decree from the point of view of Jewish religion. There is, however, no good reason for doubting the historicity of a decree issued by Cyrus giving permission to the Jews to return to their old home: (1) Such decree would be in perfect accord with the general policy of Cyrus as reflected in his own inscriptions; (2) the imminence of a conflict with Egypt would make it desirable to have near the borders of Egypt a nation on whose fidelity and gratitude he could rely. Whosoever is left—Without the means of returning to Jerusalem. Gold . . . silver—To purchase food and other necessaries during the journey. Goods—Camp baggage and furniture. Beasts—Animals for carrying the supplies. Freewill—Voluntary gifts of a more private nature, to be used for the rebuilding of the temple.

5-11. Preparations for the return and the return itself. Judah and Benjamin—The author holds the view, found also in other Old Testament passages, that the southern kingdom consisted of two tribes (1 Kings 12. 21, 23); other passages assert that Judah alone constituted the southern kingdom (1 Kings 11. 12, 32, 36). Strengthened—The Babylonians and the Jews who remained behind gladly assisted those who decided to return. Vessels of the house of Jehovah—Compare 2 Kings 24. 13, 25. 14, 15, and 2 Chron. 36. 7. His gods—Better "god." The chief deity of Nebuchadnezzar was Marduk, who had a magnificent temple in Babylon. Sheshbazzar—Both he and Zerubbabel are named as governors of Judah (Ezra 5. 14; Hag. 1. 1, 14; etc.); consequently it has been thought by many that the two names refer to one and the same person. It is more probable, however, that they refer to two distinct persons. Sheshbazzar preceding Zerubbabel as governor of Judah. Platters . . . bowls—The meaning of the words is not absolutely certain. Knives—Better, "censers." The total secured by adding the figures in verses 9 and 10 falls far below the total given in verse 11. Captivity—The company of exiles accepting the offer of Cyrus.

Poultry

Winter is fast approaching, and every advantage should be taken of the fine weather for doing such outdoor work that can not conveniently be done when the weather is cold or snow is on the ground. There are fences to repair, roofs to examine for leaks, and general fixing up of the entire house. The runs, too, need a good cleaning up and spading.

All the old hens, not intended to winter over, should be sent to market while the prices are good.

Now is a good time to lay in supplies for the winter, especially such as incubators and brooders, and to secure new blood that may be needed in the flock. Orders are more promptly and carefully filled now than later on when there is a general rush.

The moulting season is surely putting a rusty, unattractive appearance on the fowls. They need a tonic; a few pieces of rusty iron in the drinking water will have a good effect. About five per cent old-process oil-meal added to the mash is good medicine at this time. Sunflower-seed, mixed with the grain feed occasionally, will add luster to the feathers.

Caponize all the surplus young cockerels during October.

It is not uncommon on farms to allow the poultry to roost outdoors in summer, on trees or wherever they may find a satisfactory perch, and this is often permitted away into the winter months. The practice is not a good one, especially after the fall weather starts. If the stock has not already been placed in the houses, it should be done at once. Exposed hens never have good egg records during cold weather.

Hogs

Most economical gains on hogs are secured while the pigs are young, and for that reason it is advisable to finish hogs as early as possible, weighing 200 pounds when marketed. Gains on adults are expensive, and feeding them during too long a period loses money.

Weaning time is the critical stage in the life of fall pigs. Three weeks before weaning teach them to eat, supplying a box or creep which admits the little ones only. Feed a little middlings and skim-milk, adding later some sifted ground oats.

Pigs may be self-fed from six weeks onward. It is best, however, to start self-feeding at about ten weeks of age. With paddock feeding a self-feeder will save fifty per cent. of the labor. On pasture, with running or a continuous supply of water, nearly seventy-five per cent. of the labor may be avoided.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

"The future of society is in the hands of the mothers."

ENLARGED TONSILS.

In children having adenoids there is mouth breathing and narrow chestedness and thus poor lung expansion —by which the child becomes starved for oxygen and an easy candidate for consumption; snoring; open mouth; a vacant dull expression of the face; unpleasant, toneless modifications of a naturally pleasant voice, such as the "nasal twang"; inability to pronounce certain letters; earache and other ear affections, even deafness, by shutting up the Eustachean tube, which leads from the pharynx to the ear, and which should always be open; mental deficiency, making a dunce of a naturally bright child; frequent attacks of coryza (nasal catarrh); nosebleed; irregular teeth and jaw formation; stunted growth; convulsions; and a generally nervous condition, so that an ordinarily good child is accused of wanton misbehavior or cross perversity. Such are signs of adenoids.

In addition to what I have already stated deformities appear. The natural and uniform development of the face is hindered, leading to the narrow jaw with crowded teeth and the high-arched pallet. And it takes the highest skill of those dentists who have made a specialty of "orthodontry"—teeth straightening—to correct those jaw deformities. In the chest there are likely to be alterations of shape; in some cases the pigeon breast, but in most cases the formation is hollow at the lower end of a breast plate which the child makes obvious when the parts are sucked in with each inspiration.

When enlarged tonsils are found in children adenoids are sure to be present also in 90 per cent. of the cases. Tonsils are sometimes enlarged from birth; but they usually become so by successive attacks of tonsilitis, or quinsy, diphtheria, scarlet fever, measles, or in fact any nose and throat inflammation. Sometimes the tonsils become so enormous that they actually touch in the act of swallowing; also in such children there is the "throaty" voice, as if the mouth were full of food; and there is a dry cough in some cases. Much stuttering begins thus. The glands in the neck beneath the skin are also liable to become swollen and tuberculosis all too often follows.

QUESTIONS AND ANSWERS.

Baby is Restless.

I am nursing my seven weeks old baby every three hours and whenever she wakes at night. She seems very restless at times.

Answer — Possibly the feeding "whenever she wakes at night" is the cause. Babies on the breast do better on 3 hour intervals during the day and 4 hours at night. 6 and 9 a.m., 12 m., 3, 6 and 10 p.m. are right. After the third month discontinue the 2 a.m. nursing repast. Try if a little water to drink will not soothe the baby at night; babies should always have plenty of water.

Cocoa.

Can one drink cocoa daily without injury to the health?

Answer—Assuredly, once a day. A most nutritious beverage. Just a trifle heavy in the dog days however, since it has a considerable fat content. Not as stimulating as tea or coffee, but more nourishing. It is therefore preferable in cases where tea and coffee excite the nervous system, causing palpitation, tremors and insomnia. This is not to say, however, that tea and coffee are to be abjured for most of us. When taken in moderation the latter are wholesome.

Kitchen Patriotism

By Ruth M Boyle

"My son and two of my nephews have enlisted. My daughters are making surgical dressings for the Red Cross. I am kept so busy at home that I can't be of any use, and it is hard to have to go on from day to day just as if there wasn't a great war that we have to win. Yet there doesn't seem to be anything that I can do to help."

She was a farmer's wife, and she was managing a home for six hard working, healthy people. She didn't realize it, but her part in winning the war was probably as important as that of the son who had enlisted and the girls who were making surgical dressings.

This is the way a woman's home economics expert who is giving her time and her talent to the Government to find means of conserving the food which is so necessary and so scarce in the world just now, explained it to me.

"War," she said, "depends on wealth. Now, there isn't any wealth except that which comes out of the woods, out of the sea, out of the mines, and off the farms. So you see the fate of the world hangs on the farm, the farmer, and the farmer's wife—and not the least is the farmer's wife. It is the woman of the house who plans what is to be eaten. If the plans will, our own country and the men at the front can be fed."

No woman can think for a moment of the lads most of them just fin their twenties, remember that — "somewhere" at the front, and not feel impelled to starve herself, if necessary, in order that they may have plenty. But no such sacrifice as that is necessary. What does the nation ask you to do?

A few simple things: to save wheat, to save meat, to save butter, to use perishable fruits and vegetables as far as possible in order to conserve those that can be shipped long distances.

This does not mean that you must not give your family all they need, in order to keep them in proper health, they must have plenty of wholesome food. But it does mean substituting corn and other grains for wheat, which is needed across the sea. It means using cheese and fish and all possible substitutes for meat. It means that although you may use butter as usual for the table, you must not use it in cooking. Above all, it means the elimination of waste. There should be nothing left on the plates, and the left-overs should be served at another meal.

Plan your meals with the needs of your country in mind, and you are serving your country as truly as any soldier in the trenches. And then it may be some consolation to you, when you think of your own boy "somewhere" under the colors, to know that you, with thousands of other women, are using your skill and your wits in order that he may be well provided for.

The Dairy

A bull is half the herd, if he is a purebred capable of transmitting big good qualities. But if he is a poor sire, he is more than half—he is nearly all of it. At the Ohio station a bull whose dam had a high official record and whose grand-dam had a record of large production, sired daughters which showed an average gain over their dams of 1,962 pounds of milk and sixty pounds of fat the first year. Their average yearly difference was more than 1,100 pounds of milk. Another sire selected from one of the best herds in the state showed a decrease of 687 pounds of milk and thirty-nine pounds of fat. His sire and dam had no official records.

Bitterness in cream and milk is a frequent trouble during fall and winter months. If milk is bitter when it is drawn, the trouble is with the cow or her feed. Very often cows give bitter milk toward the close of their lactation period. The old dry weeds of winter pasture also give rise to a bitter flavor in milk. The remedy in this case is to keep the cow from such pastures.

Scalding Poultry

Dressed poultry for long-distance shipments had best be dry-picked, but for near-by markets or home consumption scalding is perfectly proper. In fact, scalded birds sell best to home trade.

The water must be as near the boiling point as possible, without boiling. Care must be taken in scalding. The legs should first be dry-picked, so that it will not be necessary to immerse them in hot water, which would change their color and cause them to lose their brightness. Neither the head nor the feet should touch water. If the head is allowed to get in hot water it will present a sickly appearance.

ECONOMIC PRODUCTION OF WHEAT IN RELATION TO FOOD PRODUCTION

By Henry G. Bell, Agronomist.

(Concluded from last week)

The Canadian farmer is a manufacturer, and he is interested in everything that will add to the efficiency of his crops. He finds himself short of sufficient manure to cover all of his wheat areas and the areas of the other important crops, such as corn, potatoes, etc., hence, he supplements the plantfood of the soil and manure by the addition of suitable fertilizers. Probably no phase of wheat-growing has a more important bearing on the economic production of the 1918 crop than proper fertilization.

Now, what are fertilizers? They are carriers of available plantfood; just the same plantfood as is carried in farm manure. Fertilizers are composed of materials gathered from sea and mine and air, as well as from the by-products of various industries.

You speak of bread carrying protein, carbohydrates and ash. Well, fertilizers supply nitrogen, which is the basis of protein, potash, which causes the formation of starch and other carbohydrates, and phosphoric acid, which hastens the growth of the crop. Therefore the fertilizer industry is closely linked with the farmer's important calling in producing the food of the world.

The Value of Fertilizers.

Now, does it pay to fertilize wheat? This depends upon four things:

(a) The productiveness of the soil;
(b) The yield of wheat obtained;
(c) The price of wheat;
(d) The cost of fertilizer.

I have already dealt with the first factor, in last week's instalment of this article.

The yield of wheat is directly dependent upon the supply and balance of plantfood. The oldest fertilizer tests in the English-speaking world have been conducted by Rothamsted Experiment Station, England, where, as an average of 51 years, there was obtained an increased yield of 18.1 bushels per acre from fertilized wheat over wheat grown without fertilizer.

At present wheat prices, such increase in yield is full of interest to the farmer. But he asks, can such increase be made economically? Farm labor has increased in cost; seed and fertilizer have likewise increased. A careful study of the situation shows that the advantage is still with the farmer. A very small increase in yield will pay for a liberal application of fertilizers on wheat.

Time will not permit my going into the adaptability of the analyses of fertilizers used by various experiment stations, but a careful charting of the yields of wheat obtained at Ohio shows that acid phosphate can be used at material profit on wheat. It is strongly advised by the experiment station.

A similar study shows that nitrogen and phosphoric acid give material profit at present wheat prices and fertilizer costs. Complete fertilizers, or those carrying potash as well as nitrogen and phosphoric acid, also give a profit at present prices. On sandy soils or on soils containing a high percent. of muck, potash is especially desirable.

Fertilizers have an important bearing on the next factor in economic wheat production, which is insect and disease control. The most destructive insect effecting the wheat crop is the Hessian Fly. This insect lays its eggs on the leaves of the healthy plant. The maggot hatches on the leaf and bores into the stalk. Having damaged the wheat the maggot goes into a dormant state known as the "flaxseed" stage. This flaxseed remains in the stubble, coming out in the fly form early in August. The life of the adult fly is but a few days probably but a week or less, as a rule a great mass of flies appear about the same time. If the wheat is sown after the flies appear, by the time the wheat is up they are gone and the crop escapes the attacks of this insect. Now, late sown wheat is at a disadvantage in that it has but a short time to make sufficient growth to withstand the cold weather of autumn and winter. By the addition of 200 to 400 lbs. of fertilizer per acre at the time the wheat is seeded, there is added sufficient available plantfood to enable the crop to make this strong healthy growth.

The wheat crop suffers material losses in some sections from attacks of smut. This is a fungous disease which spreads throughout the growing plant and comes to its fruiting stage about the time the wheat grains are filling. The spikelets of the infested crop, instead of containing well-filled kernels, contain sacks filled with little black seed-like bodies known as spores, which are actually the seeds of this disease. The wheat crop can readily be freed of smut disease by treatment with formalin, as indicated in the publications of nearly all of the agricultural experiment stations.

The profitableness of the use of fertilizers in producing more and better wheat is established. It is the logical practice in connection with the use of good seed and proper soil tillage.

Five Important Factors.

The fertilizer industry, like all other industries is encountering enormous difficulties arising from the present war. Its nitrogen carriers are used as a basis of explosives. Potash from Europe, as you know, is now only in memory, and submarine activities have greatly aggravated the shortage of sulphuric acid used in the manufacture of acid phosphate. Nevertheless, the fertilizer industry is vigorously endeavoring to supply the Canadian farmer with as much available plantfood as can be assembled and manufactured, so that he may do his part in overcoming the food shortage.

Let me again emphasize these points to all growers of wheat—points which are established beyond a question by careful experimentation and actual experience—that the largest crops of best quality wheat can be produced by giving careful attention to the following five important factors:

(1) Thorough drainage of the soil;
(2) Thorough preparation of the seed-bed;
(3) Selection of suitable varieties of wheat and good quality seed;
(4) Adequate fertilization;
(5) Control of insect pests and diseases.

Attention to these five details will enable Canadian wheat-growers to do still more efficient work in the campaign for increased food crops, and thereby render great service to humanity in this tremendous crisis of the world's history.

Bedtime Stories

The Fairy With The Lantern.

The little fairy of whom I am going to tell you was named Jack, and he lived about Christmas all the long, dark hours, a tiny lantern. During the day he must have slept very soundly, for he was up o' nights until very late,—but in such snug places that you would never dream of finding him. At night, though, it was easy enough to see what he looked like. At least so thought Annabel, who, her grandfather said, had eyes that saw things no others ever could see. She declared that Jack was just about five inches high, that he wore a peaked hat, and that the light of his lantern, as it danced over the big marsh near her grandfather's house, was like the blue flame of a candle.

Grandfather had several times warned the little girl when she came to visit him never to have anything to do with Jack. He said that if Jack was a fairy, as she insisted, he was certainly a very naughty one, who would like nothing better than to lure people fellow him into marshy lands where they would be sure to be stuck fast in the mud; then he would laugh at their plight, but never offer to help.

But Annabel, although she promised that she would never even try to go near the little blue dancing light, insisted that Jack was a good fairy, and some day, she said, they would find out that she was right.

One night, when Annabel was staying at grandfather's, the lights burned more brightly even than usual. Indeed, it was soon seen that there were two of them, and then three.

"Jack has borrowed another lantern or two," said Annabel.

"He does well to make the most of his time," replied grandfather, "for to-morrow men are coming to begin the work of draining the marsh, and then will be the last of Mr. Jack and his lantern."

And, sure enough, the next time that Annabel went to stay with grandfather, and no light looked out of the window, there was no light to be seen flitting about anywhere; for the bog was now hard and dry.

"It's just as I told you, Annabel," said grandfather the next morning. "That bad fairy has gone away forever."

Annabel's curls nodded, but her lips added, "Only, grandfather, he was a good fairy. You see, he knew that in the dark people might walk into the bog and get almost drowned. So night after night Jack stayed there, waving his little lantern to warn them away. I often used to think how sleepy he must have been."

Grandfather smiled. "That's my dear little girl," he said, laying his hand on her curls, "who is going to find all the good she can in everyone, even in a fairy."

But Annabel, her mind still on the fairy, said, "And I'm sure, if you go to another bog, you'll find Jack there with his same little lantern, warning everyone to keep away. Indeed, indeed, grandfather, he was a very good fairy, and I shall always try to remember him."

The man who ridicules the ancestors of other people evidently considers himself the fruit of a special creation.

How better can we

Increase Production

than by putting that extra 100 lbs. of finish on a beef steer?

Finished animals will bring big prices at the

The Paisley Advocate

PAISLEY, OCT. 10th, 1917

VILLAGE COUNCIL

Council met on 4th Oct. Members all present. Minutes of last meeting read and adopted.

Communications were read as follows:

From the secretary of the British Red Cross, announcing another call for support and enclosing statement of contributions from this municipality amounting to $507 61 in 1915 and $723 12 in 1916

From the Governor-General and the Duchess of Devonshire, urging contributions to the Canadian Red Cross Society for the needs of the sick, wounded and imprisoned sailors and soldiers of the Imperial forces.

Houston—Logie—That payments be made as follows: M Leitch, $65; R C Wilkins, $21 65; Electric Light Co, $47 37; Weighmaster, $17 65; Can. Consol. Rubber Co., $10 20; Paisley Advocate, $; D A Lyon, $7 59; J R Trelford $1 25; W Sparrow, $2 20; Thos Sparrow, $2 30; Chas Murcer, $3 30; C Hepburn, $1 30; C Sutherland, $1 75

From the Dominion Fire Chief's Association urging a cleaning up of all waste matter to face yearly, as a means of fire protection, and requesting copies of fire by laws.

Pearce—Houston—That Mr Leitch be permitted to employ Thomas Sparrow as his substitute for three weeks commencing Oct 5th —Carried.

Logie—Houston—That the council chamber be placed at the disposal of the Exemption Tribunal.—Carried.

Fraser—Lewis—That this board do now adjourn to meet again on Monday, Nov 5, at 1 o'clock p m for general business.—Carried.

M C PEARCE Clerk.

Death of a Greenock Pioneer Mother

At the ripe age of 81 years Alice Colborne, beloved wife of Mr Edw and Wynne, of Greenock, passed away on Sunday night. The deceased had been a resident of the Tp for over half a century, having come with her husband from Lanark Co in 1866. They lived on the 12 th con for a few years, but in 1878 moved to lot 10, con 17, where their home has been ever since. She was born in Montague Tp., Lanark Co., on June 9th, 1836, and was married there in 1853. Besides the sorrowing husband a family of three sons and three daughters mourn her demise: William W and John at home; Albert E., of Waterhewin, Alta; Mrs Jas McFadden of Saugeen; Mrs G O Matheson, of Edmonton; and Mrs Geo Milligan, of Mich. Among those who have known Mrs Wynne as neighbor, friend or acquaintance she was highly regarded and esteemed. She was a member of St Paul's Anglican church, Pinkerton, and the funeral on Tuesday afternoon was conducted by the rector, Rev Mr Howser. Interment was made in Purdy's cemetery.

Sons Strike It Rich

Afraid that the Government would confiscate his wealth for war purposes, a resident of Carrick who has a large family and a fat bank account, is reported to have handed his sons $2000 each, thus making his boys happy at the same time that he allayed his own fears. Although the father was the victim of a silly alarm in this case, as the Government has no intention of raiding the bank accounts of the people in this way, yet there are many fond sons right in Walkerton who only wish that dad would take a similar fright and calm himself by handing them over his wad.—Herald and Times.

—Chesley Enterprise: Mr Jas Davie on Oct 2nd attained his 82nd year and is still able to do a day's work and can eat three hearty meals each day. He did his first kicking in the Parish of Slains, Aberdeenshire, Scotland in 1835, came to Canada in 1845 and to Bruce in 1855. He is a regular Scot. He was a pioneer settler in Greenock and when he sold his fine farm in that Township over 20 years ago he moved to Chesley where in the eventide of life he enjoys the greatest boon that can come to any mortal, namely, good health. That he may still be able to digest three meals a day at one hundred is our best wish for this sturdy old pioneer.

—Miss Florence Gordon, adopted daughter of Mr and Mrs W H McLean, of Ellengowan, received word that her eldest brother had been killed in France. The deceased was a trained soldier before the Kaiser took the warpath, having been in service in India for a few years, and he was called to the front as soon as hostilities commenced in 1914. Florence has two other brothers fighting for king and country, who have been wounded several times and : both now in hospitals in England.

MARRIED

LUTTRELL—STODDART—At the Rectory, Paisley, on Sept 26th, by Rev J. W Diehl, Mr Geo Luttrell, of Bruce Tp, to Miss Jane Stoddart, of Elderslie.

DOUGLAS—PINKERTON—At Cargill, on Oct 10th, by Rev Mr Howser, Mr James Douglas, Reeve of Hepworth, to Isabella Helena Pinkerton, of Pinkerton.

BROWN—HAGGOORN—In the Church of the Ascension, Paisley, on Oct 8th, by Rev J. W Diehl, Mr Arthur James Brown, of Paisley, to Laura, eldest daughter of Mr and Mrs Wm Haggoorn, Elderslie.

HEALTHIEST ONE IN THE FAMILY

No Sign Of Dropsy And Kidney Trouble Since Taking "FRUIT-A-TIVES"

HATTIE WARREN

Port Robinson, Ont., July 8th, 1915.

"We have used "Fruit-a-tives" in our house for over three years and have always found them a good medicine. *Our little girl, Hattie, was troubled with Kidney Disease.* The Doctor said she was threatened with Dropsy. Her limbs and body were all swollen and we began to think she could not live. Finally, we decided to try "Fruit-a-tives". *She began to show improvement after we had given her a few tablets.* In a short time, the swelling had all gone down and her flesh began to look more natural. Now she is the *healthiest one in the family* and has no signs of the old ailment. We can not say too much for "Fruit-a-tives" and would never be without them".

WILLIAM WARREN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Beer Manufacture may be Prohibited

A despatch from Ottawa dated Oct 9th, says that the use of grain in the manufacturing of beer or spirits except alcohol for munition work will probably be prohibited in Canada. Some such action is expected and will go into effect almost immediately. For the past year but little grain has been used in the manufacturing of alcohol for beverage purposes, as most of the distilleries are producing alcohol used in the manufacture of high explosives for the British and Allied armies. There has been, however, a great quantity of grain used in producing beer for the local, as well as foreign trade. This will be stopped to conserve the food supply. The United States has prohibited the use of grain in the manufacture of spirits, but permits the manufacture of beer. It is expected that the Canadian law will be much more drastic, going even to the extent of stopping the production of two per cent, or temperance beers.

BORN

IRWIN—In Bruce Tp., on Oct 10th, to Mr and Mrs Robt Irwin, a son.

DIED

WYNNE—In Greenock, on Oct 7th, Alice Colborne, beloved wife of Edward Wynne, aged 81 years and 9 months.

Rimless Glasses

Are Fashionable

Not invisible but nearly so.
They can be made up with either solid gold, gold filled (warranted 10 years), or nickel trimmings.
They are not expensive.
We adjust them so that they are perfectly adapted to the features.

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

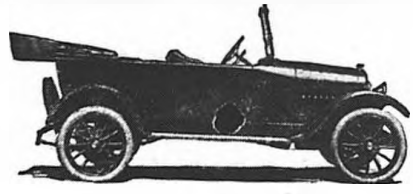
CUSTOM TAILORING is More Important than ever this Season

Custom Tailoring is your only assurance of clothes satisfaction. It is your only guarantee of getting all wool fabrics, high quality workmanship, correct style and absolute perfect fit.

The ready-to-wear market is in an unsettled condition—many poor fabrics are being used, poor workmanship is employed, and you get no guarantee of satisfaction.

Play safe. Buy good clothes—smart, individual refined clothes—in short, buy our custom tailored Fall Suits and Overcoats at $15 to $35.



To the Ladies:

Our Ladies' Tailoring trade has now developed to such an extent that we have a larger number of orders than at any time in the past, and we are in a position to produce the new designs in styles most satisfactory to patrons.

Beautiful 1918 Maxwell Now On Exhibition

Without altering the world champion motor, the famous perfected clutch and transmission or the mighty axles, the Maxwell builders have produced a new wonder car, far superior in construction and in appearance to anything yet turned out by the Maxwell factories—we have this new and beautiful car—come and see it.

The car is larger and roomier, for one thing—the wheelbase has been increased six inches.
It is also a stronger and more rigid machine for the road.
The frame is now six inches, instead of three inches deep.
And the body rests directly on this powerful frame, instead of on brackets extending from the sides, as in the past.
Do you know what that means?
It means this: The firmness with which the wheels grip the road and the steadiness of the car at high speed give you a sense of security such as you have been able to enjoy before only in cars shackled with a battery of shock absorbers.

This New Car is 50 Pounds Lighter

There's a marvel of engineering for you, friends! The car is made bigger and stronger—and yet actually lighter.
This means greater ease and comfort on the road. More than that—it means greater economy.

And the Maxwell before was the most economical 5-passenger car in the world.
Compensating underslung rear springs—the last word in spring suspension—mark this wonderful Maxwell of 1918.
They mean greater comfort—greater economy, by lessening wear and tear on the car.

Maxwell Now Has the Style of the Costliest Cars

The new Maxwell is a car of great beauty.
It has a sloped windshield and rakish lines never before produced in any car costing less than $2000.
Its good looks now equal its proved mechanical efficiency.
The new upholstery is richer and gives a new comfort.
Inside and out the new 1918 Maxwell is a perfected car.
We're proud to sell it.
You'll be proud to own one.

Touring Car $1045; Roadster $1045; Coupe $1540; Berline $1540; Sedan $1540
All prices f. o. b. Windsor

WOMAN SUFFERAGE.

Its War Time Aspect.

London, Eng. The women of England are doing their duty. They are taking care of the wounded, or if they cannot assist in work of that kind they are adding their savings to promote the good work. They are knitting and sewing for the soldiers at the front. The suffragists have given so little trouble to the government that it will undoubtedly soften the hearts of those in Parliament, since the "militants" have turned all their energies to aid the fighting men of England, and so suffrage may soon come after the terrible war is over.

Thousands of women in Canada have overcome their sufferings, and have been cured of woman's ills by Dr. Pierce's Favorite Prescription. This temperance medicine, though started nearly half a century ago, sells more readily to-day, because it is made without alcohol or narcotics. It can now be had in tablet form as well as liquid, and every woman who suffers from backache, headache, nervousness, should take this "Prescription" of Dr. Pierce. It is prepared from nature's roots and herbs and does not contain a particle of alcohol or any narcotic. It's not a secret prescription for its ingredients are printed on wrapper.

Many a woman is nervous and irritable, feels dragged down and worn out for no reason that she can think of. In ninety-nine per cent. of these cases it is the womanly organism that requires attention; the weak back, dizzy spells and black circles about the eyes, are only symptoms. Go to the source of trouble. When that is corrected the other symptoms disappear.

St. Thomas, Ont.—"I wish to say for the benefit of other women who suffer that I recommend Dr. Pierce's Favorite Prescription as a great help. I have personally recommended the same to many who in turn have been helped a great deal by its use."—Mrs. F. J. Downie, 10 Olivet St., St. Thomas, Ont.

Only 10 More Days

Until this Big Fall Sale is over

EVERY day has seen the store full from 9 a.m. to 6 p.m. Why? Cause people who are out to make every dollar count can see when they are saving money. Tax Sale of Lands

NOTICE is hereby given as directed by the Assessment Act, R.S.O. 1914, Sec. 148, s.s. 1, that a sale of lands for arrears of taxes will be held at the hour of 12 o'clock noon, at the Council Chamber in the County Building, in the town of Walkerton, on Friday, the 2nd day of November, A.D. 1917, when there will be offered for sale by public auction, unless the taxes and charges are sooner paid, the following described lands in the Township of Greenock, viz: Part of lot 11, Ring St, Pinkerton, being that part of said lot conveyed to John Fullerton by instrument registered in the Registry Office of the County of Bruce as No. 6[illegible] October, 1[illegible] inclusive, 1917, a copy of which may be obtained on application from the undersigned.

A complete list of lands to be sold for taxes appears in the issues of the Ontario Gazette of July 28th to August 18th inclusive, and in the issue of July 21st.

If it be required to hold an adjourned sale it will be held on Friday, November 16th next, at the above mentioned place and hour.

Bouquet of garden flowers, Mrs Pearson, Wm Garland; window plant any kind flower, Robt Perdue, John Seiler; coll of house plants, Garland Bros, Alf Garland; coll pansies, Wm Garland; coll petunias, Wm Garland, John Mutrie, coll cut flowers, Mrs Pearson, Wm Garland; coll asters, any kind, Garland Bros.

SCHOOL WORK

Best penmanship from public school, Gladys Gale, hazel Cruickshank, Robert Porter; best map of Canada, Hazel Cruickshank, Gladys Gale, Hugh Houston; best composition on Ontario, Tom Fullerton, Gladys Gale, Cleophas Kenny; best map of Co of Bruce by pupil in 2nd or 3rd book, Christine Houston, Eileen Lambkins, Dolph Wilson; best penmanship by pupils in 2nd or 3rd book, Florence Clark, Carlyle Taylor, Christine Houston; best drawing of mare and colt, Cleophas Kenny, Hilda Kenny; coll of weeds with plants and flowers, S S No 5 1st and 2nd.

PROVISIONS

Loaf homemade bread, And Schmidt, Mrs Pearson; loaf homemade bread by girls under eighteen, Bertha Fiddis, Ruby Gross; dark layer cake, John Mutrie, Frank Hammare; apple pie, Wm Garland, And Schmidt.

SPECIALS—Bread, biscuits, buns, Cargill flour, Alf Garland, John Mutrie; bread, biscuits, buns, Pinkerton flour, Alf Garland, John Mutrie.

GRAIN

One bag white winter wheat, A Schmidt, Frank Hammare; red winter wheat, Wm Enke, Schmidt; wheat, any variety, Schmidt, Alex Carr; black oats, Schmidt, Carr; white oats, Schmidt, W T Stewart, Carr; barley 6 rowed, Schmidt, Carr; Indian corn, yellow, Schmidt, Geo Fiddis; sweet corn, Schmidt, W T Hopper; timothy seed, Schmidt, Walter McKay, Carr; white beans, John Mutrie, John M Hopper; beans, any variety, Alf Garland; flax seed, W Enke, Alex Carr.

MANUFACTURED GOODS

Set double harness, I Reaburn; set single harness, J Reaburn; assortment of brick and tile, Mr Brownscombe.

The officers of the Fair this year are:—President, John Clancy; 1st Vice-Pres, D Pinkerton; 2nd Vice-President, W T Stewart; Sec-Treas, A Pinkerton; Directors—Robert Perdue, Wm H McGatt, Rev R M Gale, John Cruickshank, Alex Carr, Adam Reid, John Mutrie, Jas Garland, B Wells, Stanley Garland, Mrs John Mutrie, Mrs W T Stewart, Mrs Robt Perdue.

Light Four Touring Sedan

An All Season— Every Purpose Car

Right through the year—spring, summer, autumn and winter—the Overland Light Four Touring Sedan will meet your every requirement, both as to pleasure and comfort.

And it will do it economically, for it is a popular priced car.

No need of letting this car remain idle during cold and inclement weather, for it can be converted into a thoroughly closed car in a few moments.

Adjustable side windows permit you to raise or lower them to suit your convenience. They drop into special spaces provided in the body and doors.

The top and window pillars are permanent.

You can enjoy open car comfort in the summer and closed car protection in the winter.

And either closed or open, the Overland Light Four Touring Sedan is a smart appearing car—one that we believe will give you more for your investment than any other of its type offered in Canada for the same amount of money.

The AUTOMOBILE

Cures For Smoking Cars.

"Smoke from the automobile comes from two sources, burning too much gasoline and using too much lubricating oil: usually the latter," says an expert. "Excessive use of gasoline comes from faulty carburetor adjustment, or poor design of carburetor or intake manifold, or keeping the engine cylinder at too low a temperature, because of the water being too cold in the cooling system.

"In the latter case the carburetor may vaporize the gasoline properly, but it condenses in the cylinder and does not burn well, and the part which is not consumed passes off as black smoke, which issues from the exhaust pipe.

"We must have a certain amount of oxygen to consume the gasoline entirely. The size of the cylinder limits the amount of air (from which the oxygen is taken) which may be taken in, and if the carburetor is adjusted to feed too much gasoline there may not be enough oxygen present to consume it all. Practically speaking, what is not consumed forms carbon or smoke.

"The obvious remedy is to supply heat to the ingoing air at the mixing chamber of the carburetor, so that vaporization will be complete, or adjust the carburetor so that no more gasoline will be fed to the engine than is required for running. This latter, of course, is the economical thing to do.

"A light blue smoke coming from the exhaust pipe indicates too much lubricating oil. This may be due to feeding too much oil to running the engine a great deal with the throttle nearly closed. In order to draw a charge of gas into the cylinder the piston travels partly out of the cylinder and forms a vacuum. With the throttle wide open a high vacuum is not obtained because a large amount of gasoline and air is allowed to come in and fill the cylinder. The engine is throttled down by closing the throttle so that the air cannot get in in such a large quantity, consequently there is a decided vacuum in the cylinder on each intake stroke of the piston.

Heat Mixing Chamber.

This vacuum has a tendency to draw oil up past the piston into the combustion chamber; here it burns and forms smoke. That is why, when the machine is left at the curb with the engine running for any length of time, it will often be found to start away with clouds of smoke issuing from the exhaust.

"In the same way, when the engine is running slowly, air passes through the carburetor so slowly that the gasoline is not broken up into very fine parts, consequently it does not fully vaporize and is very easily condensed. It forms liquid gasoline in the intake pipe or cylinder. This is called 'loading up' and is responsible for black smoke when the machine is started.

"One way of overcoming this is to supply a larger amount of heat than usual to the mixing chamber. Most carburetors are not designed to take care of this condition, and the only remedy would be to stop the engine, instead of allowing it to run while standing at the curb.

"To overcome smoke from the oil which is drawn up past the piston it is customary to have a groove turned in the piston under the lower piston ring, with five or six holes drilled in the groove through the piston. The piston ring thus scrapes the oil from the cylinder wall into the groove and back into the crank case through the piston walls. This prevents it from working up into the combustion chamber. Many manufacturers do this on the very new models, and repair men do it regularly on old models and new models which do not have it.

"Sometimes the oil level will be found too high. This may be corrected often by lowering the oil troughs or by filing off the dip on the bottom of the connecting rod so that it barely touches the oil or touches it with a narrowed surface.

How to Recognize Steam.

"In addition to the smoke resulting from too much gasoline or oil there is a large amount of carbon deposited in the cylinder which takes up space in the combustion chamber and raises the compression so high that preignition occurs and the engine knocks. The car must then be taken to a repair shop to have the carbon burned or scraped out. This is expensive work, and, besides, the car is laid up and one loses its use while the scraping is being done. The owner will see that he has been spending a lot of money to supply gasoline and oil that he didn't need to use, just to make smoke and carbon and expense, and that he is out all around.

"Smoke should not be confused with steam which issues from the exhaust pipe in cold weather. One of the products of combustion in the gas engine is water, a natural result of the breaking up of a hydrocarbon. This usually passes off at a high temperature as an invisible vapor. In cold weather it condenses immediately it strikes the air, and is visible in the form of what we call steam. Therefore, do not let the policeman take you in for having a smoking engine, when it is only steam issuing from the exhaust pipe. If he doesn't know which it is you probably can convince him by the color. If it is white it is steam, if it is black it is gasoline smoke, and if it is light blue it is the smoke from the lubricating oil. Therefore, watch your exhaust.

THE FUTURE OF THE HORSE.

The Heavy Horse Will Continue to be in Demand For Some Years.

As far as the light-legged horse is concerned, he is practically doomed. The motor car has taken his place. Although still of some use in countryside, he will go out of business as soon as the self-guiding car comes on the market.

For a number of years the heavy horse will be in demand, said Dr. J. G. Rutherford, in an address before the Western Canada Irrigation Association. He is keenly in demand at the present time. Prices were never so high. After the war, however, there will be a great demand for them in the countries now ravaged by war.

I have in my possession an official publication from the Belgian Government giving many harrowing details as to what happened to the Belgian horses. The breeding mares and foals running in the fields were slaughtered, being often used as targets by the German soldiers. One pure-bred stallion, valued at $10,000, was burned up in his box while the groom and his wife and children were forced on their knees to watch the agonizing death of the noble animal. Then, the Germans realized that they were making a mistake in destroying these valuable horses, and began to ship them to Germany. They sent their experts to select the best individuals, giving to the Belgians for payment orders on the Republic of France, payable at Paris. These orders were in German and were often for the most trifling sums.

I have had interviews with representatives of all the large cartage companies in our cities and they say that, so far as they have gone in trying out the motor trucks, they have found the horse much more satisfactory and economical. Whether the development of the motor truck, which, until comparatively recent years, did not receive as much attention as that of the passenger car, will be found with energy enough to make it sufficiently economical to supersede the horse, I cannot say. The heavy farm tractor is a thing of the past. The light farm tractor has come in to stay. So far as the horse business is concerned, a man can continue to breed heavy horses without any risk of market failure for at least ten or fifteen years to come.

Bees, in addition to their honey gathering, are useful as pollenizers and almost indispensable to the continuance of a large percentage of plant life.

There are 350 species of parrots, chiefly confined to the warm parts of America, Asia, Africa and Australia. There is none in Europe and none in Asia west of the Indies; and while numerous in the Malay archipelago, they are wanting in China, Cochin China and the Philippine Islands. The only species native to the United States is the Carolina parrot.

THE MAPLE LEAF BOYS AT LOOS

FRENCHMAN'S DESCRIPTION OF CANADIAN ATTACK

Prussians Ordered to March on Guns in Close Formation Against Terrible Odds.

Shortly after dawn this morning I saw the Canadians finish up a battle begun in September, 1915, the battle of Loos, then only half won and now entirely so. I have looked upon nothing more spectacular in all this war's work, writes Henri Bazin from France on the 17th of August. These soldiers from across the Atlantic stormed and took the whole of Hill 70, famous in earlier days for one of the toughest struggles ever fought by men. Then, as now, the enemy were, in the main, Prussian Guards. Only now they were the veriest cream of all that is left of the German army.

It was not any tea party. The Canadian attack covered a front of two and a half miles, extending north from Victor Hugo wood, where the Loos salient begins to outline itself, and reaching full way on the south to Lens itself, embracing the whole of two villages, Cite St. Emilie and Cite Saint Laurant. Something in the last name for a Canadian, through whose land runs the St. Lawrence to the sea.

A 200 Yard Advance.

The depth of the advance before me was perhaps 2000 yards, and the go and come, the give and take, to be compared to naught else than a cracking whip in its sinuous lines and curves of fighting men.

Most of the Boche neither fought nor surrendered on their part of the field when they broke before the bayonet onslaught of the Canadians. And as I looked from a height and witnessed through my glass the guard breaking I saw some of them fall in a barrage fire—they ran into the very block of it. One becomes accustomed to seeing men die, and one takes it as part of the game. I thought this as I looked and shuddered a bit at my nonchalance. Out there mothers' sons were giving their life blood. My mind went back to the mental impression it would have made upon me two years ago, and it frightened me. I had not hardened. I had only seen so very often how millions of men consider honor greater than love of life and made no hesitancy of choice between.

The Old, Stupid Boche Way.

I saw one thing I had seen before on the French and again on the British front and which I expect to see still again. The Prussian Guard double counter-attack after repulse, counter-attack in the old stupid, arrogant Boche way. Their efforts were magnificent, but surely not war as war is fought in these days. They marched out as on parade, in column of fours, to find the north of their own line so exposed to a hell of British fire that they could not deploy and were forced to walk on to their death or die in their tracks. They chose the former, or their goading officers chose for them, the ancient Prussian thing pure and simple.

Under direct fire they kept on, decreasing in numbers yet keeping still on. It was truly magnificent, but horribly suicidal. I never saw an advance under such a terrific fire. A whole body of several thousand men was shot down before my eyes. They died and did not fall. What is the life of German soldiers to Prussian military prestige, that proud thing fading into a past?

Victorious Canadians.

Suddenly they broke the second time. And almost instantly the British artillery fire slowed down and out sprang the men from Canada. They carried everything before them. The guard, that which was left of it, wilted like a flower. And Canada went right through. Every inch of ground threatened in the Boche counter-attack remained in Canadian hands, plus some more that was found to be a mass of tangled wire defenses thickly strewn with German dead bodies. All along a line as far as the eye could reach the fight went on; far to the left I could just make out the blue of the poilu's uniform, for a certain French army was fighting in unison. I saw them advance, and I knew what they could and would do. Here, I thought, was a real combination, the fighting poilu and the fighting Canadians putting it across.

Toward noon there was a lull. Apparently nothing in the way of added counter-attack would take place for a little while. The artillery fire resumed and great shells passed from behind me far off into German lines. With my officer escort, I left the observation post and went forward to meet the first of the incoming prisoners. The first bunch I saw comprised perhaps fifty men, that met us in the ruined street of a ruined village, now but a mere blot of crumbled stone in the landscape. I noticed that with perhaps the exception of five, the lot I looked upon were a mixture of seasoned guards and boys of the 1918 class of the 165th Prussian regiment. I wondered how they had been mixed up with the guard. No one will ever know, perhaps.

A LOST CATCH.

Fishing For Tarpon From a Canoe is Exciting Sport.

No sport offers greater excitement than fishing for tarpon from a canoe. The six-foot monster may throw his glistening body high above your head and, plunging down, swamp your frail craft; he may tow you a mile or so straight out to sea, where the water is rough, and then break away, or, perhaps after a terrific struggle, he may give in and allow you to bring him alongside, quivering and exhausted. In The Book of the Tarpon, Mr. A. W. Dimock recounts a thrilling incident that happened on the Florida fishing grounds.

As the outgoing tide ran low, says the author, we put off in the canoe and anchored where the tarpon had been rising. I let my bait trail aft with the tide. It had drifted scarcely fifty feet from the canoe when it was caught by a tarpon, which ran out three hundred feet of line before the captain had the anchor aboard. Then the paddling became fierce. I put a twenty-pound strain on the line and worked the handle of my reel as if it had been a windlass. After the fish had leaped three times I supposed that I had tired it, but it started away with renewed vigor.

We were being carried toward the breakers and in two minutes were being tossed about by the rough water, where the rollers from the gulf met the tide from the pass. Here the tarpon jumped several times and made a final spurt, but we finally drew the canoe beside it.

Taking the shank of the hook in my left hand, I was cutting it free from the tarpon's jaw when, suddenly, the open mouth of a monster from beneath the canoe slipped over the body of the fish, and, closing, cut it in two. I threw myself backward and nearly fell from the canoe, which took in gallons of water. In our attempts to balance the cockleshell we made it careen so far that the captain went overboard. A moment later he was swimming with one hand on the gunwale.

"Climb aboard, quick!" I shouted, thinking of the great shark that had room enough left in its stomach to accommodate the captain.

"Can't do it without swamping you. Paddle for the beach outside the pass. I'll hang on here and swim with you."

I paddled as if for life, with the vision of those cruel jaws closing through the living body of the big tarpon. I tried to talk cheerfully to the captain to keep the grisly spectre from his mind, but my breath was wasted, for he did not hear me, and he remarked to me afterwards:

"I ain't often afraid of sharks, but I was scared blue that time. I kept thinkin' of that tarpon, and every time I kicked I could feel the shark behind me. You'd better believe I was glad when we got among the breakers in the shallow water."

That beast of a shark chased me round all that night, and the captain confessed at breakfast that it had bitten him in two a few times.

Dickie's Deduction.

A teacher asked her class to write an essay on London. She was surprised to read the following in one attempt:

"The people of London are filled for their stupidity."

The young author was asked how he got that idea.

"Please, miss," was the reply, "it says in the textbook the population of London is very dense."

The running of a gas engine may often be improved by cleaning it out with gasoline.

POULTRY DISEASES.

Responsible for National Loss of Millions of Dollars.

At least fifty per cent. of the chickens, young ducks and turkeys and ten per cent. of the adult birds die each year from diseases, many of which are preventable. This is an annual national loss of probably millions of dollars that could be avoided to a large extent.

War conditions make it imperative that farmers and poultrymen, as far as possible, stop this leak, and in order to assist in this connection Dr. Wickware suggests that every breeder pay strict attention to the general conditions of his flock in order that any ailing birds may be immediately isolated. When anything unusual is noted in a fowl, it is advisable to place the affected individual in separate quarters if within a short time recovery does not take place, it is unwise to destroy the fowl without first ascertaining the cause of the disorder. The prevalence of diseases is more often the cause of the poultry-keeper's failure than is the lack of practical knowledge. The extreme importance of keeping the quarters clean; isolation of all ailing fowls and immediate action in regard to finding out the cause cannot be too strongly impressed upon the poultryman.

When trouble occurs, forward to the Biological Laboratory, Central Experimental Farm, Ottawa, Ont., a live but sick fowl, or in the absence of such, a dead bird. In the interval, disinfect the quarters, runs, drinking fountains and feed dishes to check the spread of any infectious disease.

Disinfect the poultry houses by spraying the interior with a limewash solution (50 lbs. stone lime slaked in a barrel of water, plus one gallon of a good commercial disinfectant). Fill cracks and crevices to destroy mites, lice, etc. If a smaller amount is required it may be prepared by adding two and a half pounds of lime to a pail of water plus half a teacupful of disinfectant.

Keep a crop growing in some part of the yards and alternate poultry and crops. If the runs are small cover with a coating of air-slaked lime and dig up. If the runs are too large to dig, plough and cultivate before sowing. Rape sown in the early part of the summer, after the breeding season, or early in September, makes a good crop for this purpose. Rear all chicks on fresh soil.

Although these precautions may appear unnecessary it is the only way of combatting many disease conditions affecting poultry, which, if left to themselves, will undoubtedly prove decidedly costly in the long run.—Experimental Farms Note.

THE BALLOT IN SWEDEN.

First Nation of the Earth to Grant Universal Suffrage.

Sweden was first among all the nations of the earth to discern the spirit of universal suffrage. Certain communal franchise rights have been enjoyed by the women of this Far North country for more than a hundred years. 1862 Sweden gave the full vote to those of her unmarried women who paid taxes. Eight years ago the rights of municipal franchise were extended to all women, and the entire womanhood of the nation seemed destined for universal suffrage just when the European war broke in 1914.

So smoothly has the feminist movement progressed that when Strindberg, the novelist, promulgated his short stories entitled "Married," having been inspired to inveigh against "the new women" by Ibsen's "Doll House," he became involved in a lawsuit instituted by the State.

Sweden first extended freedom to women in 1856 when the Conservatory of Music in Stockholm was opened to them; the universities in 1870. The University of Stockholm was the first European university to give a woman a professor's chair. Women were admitted to dentistry in 1861 and to the telegraph and postal service two years later. In 1870 they were permitted to take up the study of medicine. While we here in America have been impressed with the new and varied activities of women of late years, all these things have been done by the women of Sweden for many years.

"Say, mother, what keeps us from falling off the earth when we're upside down?" "Why, the law of gravity." "But how did we stay on before the law was passed?"

THE END OF GREATER GERMANY

NOT ALLOWED TO RECOVER HER LOST COLONIES

Because She Was Cruel to the Native Tribes and a Menace to Nearby States.

There are two reasons why Germany cannot be allowed to retain her colonies. In the first place Germany is a supreme failure as a colonizing power. She has utterly failed to win the confidence and good-will of the 12,000,000 natives who came under her rule. The rigid, unsympathetic temperament of the Germans, their instinct for bullying those they have in their power, their insensitiveness to other people's feelings and their passion for systematising everything made them from the start quite hopeless as governors of African natives. There was no give-and-take about them, no power of sympathy, no appreciation that it is the human and not the official element that is at the bottom of all tolerable relationships.

Germany is a Bad Neighbor.

And there is another reason why the return of the German colonies is out of the question. In Africa, in China and in the Pacific, as in Europe, it has been found that Germany is a bad neighbor. Her first thought is always to build up a strong military power. Her next is to use that power for aggressive purposes. The German colonies have been so many centers of intrigue and unrest. From them Germany has tried to stir up dissensions in nearby States. The solidarity of the white peoples, the comity among the colonizing powers, the friendships they have grown accustomed to observing in their relations with one another—these things have meant nothing to Germany. She was out for conquest; and her invariable policy has been, first, to accumulate a stock of armaments in each of her colonies and, secondly, to tamper with the loyalty of the races and tribes in the neighboring French, British, Chinese or Belgian Governments. That is what she has always done in Europe. That also is what she has done in Africa.

The whole world recognizes her today as an international nuisance and an international menace. But half of the blank record that has made her an enemy of the human race is left out of the reckoning unless her actions and the spirit of her rule in her overseas possessions are noted and studied. It is the universal conviction of all who have had experience of her as a colonizing power that peace and security cannot be had so long as she is permitted to enact a rule she has not merely neglected but disgraced. Greater Germany must be ended once and for all.

LAUGHING BY ELECTRICITY.

Countenance of Intelligent Person is Expressive of Feelings.

What is called the "play" of expression depends upon an exceedingly elaborate complex system of muscles that go to make up the human face. These muscles, in turn, are actuated treasonively to the emotions by nerve trunks with ever so many branches.

It is a matter that has been most interestingly studied by applying electricity to the various facial muscles. Thereby the nerves that energize these muscles are strongly stimulated, and the face assumes corresponding expressions not relating at all to the feelings or thought of the "subject."

If the nerves that act to express hilarity are touched by a pair of electrodes, instantly, by a response of the muscles, the man will assume the look of laughter, though in reality he may feel perfectly grave. By touching other nerves he can be made to look grief-stricken or horrified.

As man has developed, his face has become more mobile. It is vividly descriptive of whatever he feels. The savage has no such play of expression as the civilized human being. Everybody recognizes an expressive face as indicating intelligence. The countenance of a stupid person is relatively expressionless; that of an imbecile is, as we say, "blank."

The Doings of the Duffs.

Join the Home Defence movement for the conservation of food. Help to prevent waste by demanding the whole wheat grain in breakfast foods and bread stuffs. Substitute whole wheat for meat, eggs and potatoes. The whole wheat grain is the most perfect food given to man. In **Shredded Wheat Biscuit** you have the whole wheat grain made digestible by steam-cooking, shredding and baking. Every particle of the whole wheat grain is used including the outer bran coat which is so useful in keeping the bowels healthy and active. For any meal with milk, and fresh fruits.

Made in Canada.

THE LION ROCK OF CEYLON.

Wonderful Natural Fortress Remarkable For Its Curious History.

Among the many relics of ancient civilization now to be seen in Ceylon none is more interesting than Sigiri, a wonderful natural fortress remarkable not only for its singular appearance but also for its curious history. About 475 A.D. a parricide prince, Kasyapa by name, who had also attempted to murder his brother, fled from his home into the wilderness, where he founded a new capital city round a rocky mesa.

Four hundred feet above the level of the surrounding country on the three-acre top of the mesa, Kasyapa built his palace,—a monastery, for he wanted to make retribution for his sins,—and many other brick and stone buildings. He carved out cisterns, a bathing tank and a natural-garnet-studded throne from which he could survey the city and the wonderful expanse of luxuriant tropical country near by.

For many years he lived there in security, and then his vengeful brother came. Kasyapa foolishly descended from his rock to give battle, and his war-elephant, turning aside to avoid a marsh, caused his followers to think that he wished to retreat; so retreat they did, and Kasyapa's brother had his revenge. After the prince's death the monk's maintained the citadel for a long time, but the walled city that surrounded the mesa gradually decayed, and so in time did the edifices on the summit. Six centuries ago they were abandoned.

To-day the mesa, on which the archæologists are working, is stained red by the action of the rain on the bricks of the citadel, and when the sun strikes it at the right angle it looms up in a sort of bloody splendor, forming a fitting monument to its former villainous ruler.

Facing a terrace at the base of the rock is a guardhouse. On the front of the rock is carved the head of a lion, and on this same terrace are its claws, between which a staircase ascended, so that it is thus apparent why the mesa is called "lion rock," a translation of Sinha-girl—or, as it is contracted, Sigiri. The staircase was a remarkable work, for Kasyapa had to build it round walls that bulge forward at base and summit. It was a walled gallery of stone, spiralling round the rock to its summit, and was covered with cement and decorated frescoes, some of which are preserved even now in their original brilliant colors. As only a small part of the gallery remains to-day, the ascent must be made on an iron stairway constructed by the Archæological Commission—a climb that is sufficient to test the nerves, for where you go up over the side, nearly four hundred feet above ground and far out beyond the base of the cliff, the downward view is not cut off, as it was in Kasyapa's time.

Stimulate crysanthemums with liquid manure.

POSTUM has been adopted as the table beverage in many a home because of its pleasing flavor and healthful nature

FOOD-SAVING IN ONTARIO.

Community Canning Marks a New Epoch in Rural Life.

Ontario is making rapid strides towards food saving. In these war days, we are doing many new things which we would not have thought out in peace times. Almost the very newest experiment is that of community canning. Parkhill Women's Institute is making a successful trial. The canning plant had a capacity of five hundred cans a day. The machinery is simple—a 6 h.p. boiler, two vats, a sink, a copper kettle, pans, spoons, measures, etc. The vats were heated with steam coils, and can be brought to boiling in three minutes. Fifty quarts of fruit can be cooked at once. The smaller vat is used for blanching and sterilizing, and the copper kettle for making syrups, jams, jellies, etc.

The aim is to conserve perishable fruits and vegetables, and to store material contributed by interested helpers for convalescent homes and hospitals. Everyone in a radius of ten miles, who keeps chickens, has been asked to contribute one chicken, and each woman who canned her own fruit contributed to this store. It looks as if this might be the beginning of a good work that should not end when the war need is over.

NERVOUS TROUBLE

The nerve system is the governing system of the whole body, controlling the heart, lungs, digestion and brain; so it is not surprising that nervous disturbances should cause acute distress. The first stages of nervous debility are noted by irritability and restlessness, in which the victims seem to be oppressed by their nerves. The matter requires immediate attention, for nothing but suitable treatment will prevent a complete breakdown. The victim, however, need not despair, for even severe nervous disorders may be cured by improving the condition of the blood. It is because Dr. Williams' Pink Pills actually make new, rich blood that this medicine has cured extreme nervous disorders after all other treatment had failed. The nerves thrive on the new blood made by these pills; the appetite improves, digestion is better, sleeplessness no longer troubles the former nerve shattered victim, and life generally takes on a cheerful aspect. Every sufferer from nerve trouble, no matter how slight, should lose no time in giving Dr. Williams' Pink Pills a fair trial, thus regaining their old-time health and comfort.

You can get Dr. Williams' Pink Pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

THE SEA HORSE.

One of the Most Ancient of Fishes and a Strange Creature.

If mermaids were no bigger than some fairies, they might have horses to ride. The sea horses are creatures familiar enough, though most people have never seen one alive. Summer visitors at the seashore find them for sale—very dead, and dried—at shops that specialize in marine curios.

The sea horse (naturalists say) is one of the most ancient fishes. It is one of nature's oddest animations—a "camouflage," so to speak.

It has a horse-like head, and its body is so shaped as to resemble the neck of that quadruped. But really, when one comes to examine it, the thing it counterfeits is the "knight" piece of the chessboard. One might even imagine that the chess knight (which has a horse's head) was modelled after it.

The sea horse has a tube-like snout, at the end of which are the mouth and jaws. Its head is topped by a sort of corset. Clad in a complete suit of armor plates, it cannot flex its body like other fishes, and its finless tail is of no use for locomotion. But the tail is a prehensible organ, by which it clings to water plants.

It feeds on small shrimps and other crustaceans. Occasionally, uncoiling its tail from the supporting plant, it swims slowly, not like other fishes, but always in a vertical position, its back fin vibrating rapidly.

Like other fishes, the sea horse possesses an air-bladder, which is always distended by a quantity of gas so exactly adjusted for equilibrium that, if a single bubble no larger than the head of a small pin be extracted, the creature falls to the bottom and must crawl about until the amount is healed and a fresh supply of gas has been secreted.

But the most remarkable point about the sea horse is that the male is provided with an external stomach-pouch, in which, at the mating season, the female deposits her eggs. The lining membrane of the pouch secretes a nutritious fluid on which the young, when hatched, are fed. When they are big enough to take care of themselves, the father sea horse rubs his stomach against a winkle shell or some other convenient object, and by this means forces them out into the water.

How About the Rice?

Each year the Canadians throw tons of rice at unconfortable brides and bridegrooms. Some of it lands in cars and eyes, some in the bride's hair and some under the bridegroom's wilted collar, but most of it literally litters the sidewalk and gutters. All of it is dead waste. There are thousands in France who would be grateful for the rice that is used to torture Canadian wedding parties.

BABY'S OWN TABLETS PRIZED BY MOTHERS

Mrs. Henry Vanreader, Rodney, Ont., writes: "I have used Baby's Own Tablets for the past five years and prize them very much. They have proved of such value to me that I always keep them in the house." Once a mother has used Baby's Own Tablets she would use nothing else. They are thorough but mild in action and never fail to make the sickly baby well. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

A Hay Building.

Farmers in the vicinity of Sunnyside, Yakima County, Wash., did a distinctive thing when they erected a "palace of hay" in which to hold their annual county fair. Some 600 tons of alfalfa were used in building the structure, whose walls were twenty-five feet high. It not only housed all the exhibits but a restroom, information bureau and a grand stand in front of which a vaudeville program was given daily. The hay was loaned by the farmers and at the end of the fair was auctioned off at a very good price.

Minard's Liniment Cures Diphtheria.

Hearts Easy to Break.

In the simpler forms of life the heart is a mass of pulsating cells, which, as the creature grows to maturity, lengthen out into a tube. In many insects and flies the heart takes a pencil form, running from the forehead to the tip of the body. In animal and bird life the heart becomes more nearly round and proportionately stronger. An insect, owing to its peculiar structure, does not have to be crossed in love to die of a broken heart. A thumb on the back will do it.

The last hundred pounds of finish on a beef steer is the most economical gain and makes a steer grade prime and get the top of the market. Buyers come from all parts of the country and pay highest prices for the good, well-finished animals at the Auction Sale of the Toronto Fat Stock Show.

Fire From a Slab of Ice.

Take a smooth, clear, curving piece of ice, one not too thick, and hold it in the rays of the sun so that it will bring the light to a sharp focus just as will a lens in a reading-glass. The ice will not last long enough to burn a piece of paper, but if the focus rests on a speck of gun cotton it will cause combustion and a flame will result. Arctic explorers have built fires often with this expedient when matches were absent and flint and rock not handy.

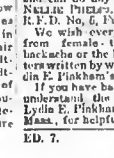
Minard's Liniment Co., Limited.

Dear Sirs,—I can recommend MINARD'S LINIMENT for Rheumatism and Sprains, as I have used it for both with excellent results.

Yours truly,
T. B. LAVERS,
St. John

Needed a Sample.

Fair Client—"I wish to sue a young man for taking two kisses. At what amount shall I place damages?" Lawyer—"Kisses, my dear lady, are variously quoted. I—er—I could judge better their value if you gave me a sample."



Minard's Liniment for sale everywhere.

The tops of young carrots and turnips are as good as leaf tops to cook for greens.

WOMAN COULD HARDLY STAND

Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Fulton, N. Y. — "Why will women pay out their money for treatment and receive no benefit, when so many have proved that Lydia E. Pinkham's Vegetable Compound will make them well? For over a year I suffered so from female weakness I could hardly stand and was afraid to go on the street alone. Doctors said medicines were useless and only an operation would help me. But Lydia E. Pinkham's Vegetable Compound has proved it otherwise. I am now perfectly well and can do any kind of work."—Mrs. NELLIE PHELPS, care of R. A. Rider, R.F.D. No. 5, Fulton, N. Y.

We wish every woman who suffers from female troubles, nervousness, backache or the blues could see the letters written by women made well by Lydia E. Pinkham's Vegetable Compound.

If you have bad symptoms and cannot understand the cause, write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for helpful advice given free.

THE ROAD OF DEATH.

Who shall say the road of Death
Falleth sheer or harroweth?
See how glad they march along,
All our manhood, full of song,
Chasing, as they pass away,
Fears and phantoms of our day,
Sure in victory or defeat
Their inheritance to meet.
He who made them let them see
Far above their agony,
To the light that never dies
Round the rest of Paradise.
Gladly do they march along,
Full of laughter and of song,
Finding none that sorroweth
Past the glacious road of Death.
—E. E. Speight.

Doctor Says Nuxated Iron Will Increase Strength of Delicate People 100% in Ten Days

In many instances—Persons have suffered untold agony for years doctoring for nervous weakness, stomach, liver or kidney disease or some other ailment when their real trouble was lack of iron in the blood—How to tell.

New York, N.Y.—In a recent discourse Dr. F. Sauer, a Boston physician who has studied deeply in this country and in great European medical institutions, said: "If you were to make an actual blood test of 100 people, 60 of them are ill you would probably be greatly astonished at the large number of sufferers who lack iron in the blood, and who are ill for no other reason than the lack of iron. The moment iron is supplied all symptoms of danger and some symptoms disappear. Without iron you cannot get the strength out of the food you eat, no matter how much you may think you are getting. You might as well try to run a steam engine with the fire drawn as try to get strength out of your food merely passing through your system like coal through a mill with the fire drawn. Thousands of people suffer from indigestion, heartburn, sour stomach, and other troubles when all they have to do is to take iron in some form after meals for a few weeks and they will eat their food and get the good out of it that they have been losing. Many people who are pale and sickly, and who feel tired, weak and miserable all the time, double their strength and endurance in a few weeks by taking iron. Others who are thin, pale and weak, double and treble their reserve power and endurance. In such cases it is worse than foolishness to take stimulating medicines containing habit forming drugs which only whip up your jaded vital powers for the moment, leaving you in a worse state than before. No matter what you may take you will find that organic iron is the most powerful and effective form of iron you can get, and the best form in which organic iron can be taken is in Nuxated Iron, which is now being prescribed by physicians all over the country. Unlike the old forms of inorganic iron that often injure the teeth, spoil the digestion and cause constipation, Nuxated Iron does not injure the teeth, make one constipated or upset the stomach in any way. On the contrary, it is a most powerful tonic and invigorator of the digestive organs, and in a remarkably short time after beginning to take it, pale cheeks become rosy with the glow of health, and thousands who were pale, sickly, nervous, run-down people who were ailing all the time double and even treble their strength and endurance and entirely get rid of their symptoms of indigestion, liver and other troubles in from ten to fourteen days' time simply by taking iron in its proper form and in such a way that it can be easily assimilated. Dr. Sauer has been prescribing Nuxated Iron for many months and he says that he has never before found any remedy which could be depended upon to produce the remarkable results in so short a time that Nuxated Iron does. He says he has seen dozens of nervous, run-down people who were ailing all the time double and even treble their strength and endurance and entirely get rid of their symptoms of indigestion, liver and other troubles in from ten to fourteen days' time simply by taking iron in its proper form and in such a way that it can be easily assimilated. But while you may now desire to build up your health by taking iron, be sure to get only organic iron, or you may not get the results you expect. Nuxated Iron is now obtainable from all druggists, and the following druggists have stated that they will refund the money to any dissatisfied purchaser after using one bottle, if they do not find that it will increase their strength and endurance at least 100 per cent. when tested according to the plain directions: Druggists in Toronto, The Wilson Drug Co., Limited, 868 Yonge St.; Druggists in Montreal, Lyman's Limited, 380 St. Paul St.; Druggists in Winnipeg, Hudson's Bay Co.; Druggists in Vancouver, Hudson's Bay Co.; Druggists in Victoria, Hudson's Bay Co.; Druggists in Calgary, Hudson's Bay Co.; Druggists in Edmonton, Hudson's Bay Co.; Druggists in Regina, Hudson's Bay Co.; Druggists in Saskatoon, Hudson's Bay Co.; Druggists in Moose Jaw, Hudson's Bay Co.; Druggists in Prince Albert, Hudson's Bay Co.; Druggists in Brandon, Hudson's Bay Co.; Druggists in Port Arthur, Hudson's Bay Co.; Druggists in Fort William, Hudson's Bay Co.; Druggists in Ottawa, Hudson's Bay Co.; Druggists in Hamilton, Hudson's Bay Co.; Druggists in London, Hudson's Bay Co.; Druggists in Windsor, Hudson's Bay Co.; Druggists in Kingston, Hudson's Bay Co.; Druggists in Peterboro, Hudson's Bay Co.; Druggists in Sault Ste. City Eye Specialists Tell How To Strengthen Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many serious eyes are failing and say they have had their eyes restored and many who once wore glasses say to have thrown them away. One man says, after using it: "I was almost blind. Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read with fine print without glasses." Another who used it says: "I was bothered with eye strain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the flattering notes on the trees across the street now, which for several years have looked like a dim green blur, to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a remarkable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Beck, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and sphinkers. Her eyes when not congested had the dull, suffused expression common to such cases. Starting out on her medicine a friend suggested Bon-Opto. She used the treatment and in only seventeen days her distressing condition, but strange and amazing as it may seem, an astonishing change had come over her eyesight was improved 100 per cent. I am a firm believer in the merit of this treatment in a number of cases and have recommended it to friends from 25 to 50 per cent in a remarkably short time. I can say it works more quickly than any other remedy I have prescribed for the eyes."

Dr. Smith, an oculist of wide experience, says: "I have treated in private practice a number of serious ophthalmic diseases with Bon-Opto and am able to report ultimate recovery in both acute and chronic cases. Mr. H. came to my office suffering with an acute iritis. The condition was so serious that an operation for enucleation seemed imperative. Before resorting to the operative treatment I prescribed Bon-Opto and in 24 hours the secretion had lessened. Inflammatory symptoms began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme conjunctivitis, of a most obstinate character, escaped the surgeon's knife by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instill Bon-Opto after removal of foreign bodies and apply it locally to all burns, ulcers and sores on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions conferred a surprising measure of service. I found my eyes remarkably strengthened so that I have discarded my glasses entirely, and with much greater comfort. Several of my colleagues have also used it and we are agreed as to its results. In a few days, under my observation, the eyes of an optimatic patient, who no longer need that glasses have been discarded by the patient."

Here are many descriptions many of remarkably healthy eyes the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let dissolve. With this liquid bathe the eyes two to four times daily. You should notice how eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have been saved their sight if they cared for their eyes in time.

Note: A city physician to whom the above was submitted, said: "Bon-Opto is a remarkable eye remedy. Its constituents are well known to the medical profession and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or misfit glasses. I can highly recommend it to users of weak, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, sun, dust or wind. It is one of the very few proprietaries I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including general stores, also by G. Tambrin and T. Eaton & Co., Toronto.

PINKERTON

Lieut. Harold Pinkerton, of London, spent Thanksgiving at his home here.

Miss Alma Reid returned from a visit to Saskatoon and Regina on Friday. She was accompanied home by Mrs Angus Reid and children of Saskatoon

Mr Jas Gale returned to Toronto this week to resume his studies at the University.

Mr Hugh Campbell, of Chesley, spent a few days in the village. He was accompanied home by his cousins, Miss Myrtle Garland and Master Thompson Garland.

The annual meeting of the local Red Cross Society was held on Wednesday of last week. All the former officers were re-elected, and the following report was read:

RECEIPTS FOR THE YEAR

Collections on tea days	$79 88
Donations	89 90
Proceeds of box socials and entertainments	274 70
From Greenock council	60 00
Proceeds from quilt, cushion and oleander	95 75
Received for old papers, etc	11 35
Collection for Red Cross and patriotic purposes	241 05
Rec'd for yarn and ends of flan'l't	6 00
Balance on hand from last year	178 73
	$1037 36

EXPENDITURE

Yarn, flannel, flannelette, sock legs, etc	$802 90
Soldiers' boxes, expenses, postage	42 17
Booth, show day, 1916	6 00
Expenses in connection with entertainments	4 35
Printing account	2 25
Postage	75
	$858 42

Receipts	$1037 36
Expenditures	858 42
Cash in treasury	$178 94

The following is a list of goods made up from Oct, 1916, to Oct. 1917, by the Pinkerton Red Cross: 448 pairs socks, 155 flannel shirts, 128 suits pyjamas, 49 surgical shirts, 18 hospital suits, 32 handkerchiefs, 98 pillow covers, 36 pillows, 21 quilts, 42 towels, 14 sheets, 2 knit wash rags, 140 mouth wipes, 4 old sheets, 2 old blankets.

(Intended for last week)

Miss Kate McGibbon of La Chute, Que. is visiting her sister, Mrs J Murray

Miss Mary Culham of Hamilton, spent Saturday and Sunday in the village.

The East Bruce S S Convention will be held in the Presbyterian church here on Thursday of this week. The afternoon session begins at 2 o'clock and the evening session at 7 45.

Miss Mettie and Mr Frank Donnelly resumed their studies at Toronto University.

Rev. Mr Gale acted as judge at the school fair held in Bruce last Thursday.

FOR FLETCHER'S
CASTORIA

SECOND CON. OF ELDERSLIE

Miss Maude Dawson, of Stratford Normal, spent Thanksgiving at her home here.

Mr and Mrs Robt. Jelkins visited Owen Sound and Tara friends for a few days last week.

Pte Russel McCulloch of Guelph visited over the holiday at his home on this con.

Messers J B Allen and S Thompson attended Tara Fair.

Wm Batterson, of West Toronto visited his mother and other friends here for a few days.

D C Lillico of Parkdale spent Thanksgiving under the parental roof.

Mr C Thomas of Brantford came up on Saturday to visit a few days with his old friend Mr A Dawson and also to accompany Mrs Thomas home who has spent the last two weeks as the guest of Mr and Mrs Dawson.

Murdoch Campbell met with a painful accident on Saturday evening. While working with a load of rails he slipped and fell off bruising the nerves of his hip badly. Fortunately there are no bones broken, so if he can manage to keep quiet and sleep in with the bears until this cold snap is over he will likely come out quite frisky again.

Miss M Stewart, teacher at S. S. No. 12, spent Thanksgiving at her home in Bluevale.

Hugh Campbell visited Pinkerton friends on Sunday.

Preserving and Pickling

We have a full line of Pure Spices, White, Cider and Malt Vinegars, Sugars, Jars, Rubbers, Parafine—everything you will require for your Canning and Pickling.

Leave your order with us for Tomatoes, Cucumbers, Onions, Plums, Pears, Peaches, Grapes.

F. CARTER & SON
Shoes, Crockery and Groceries

TWELFTH OF BRUCE

It looks like winter to see the snow flying again.

Mrs Barrie of Moosejaw is visiting her friend Mrs Millan.

Mr and Mrs Wesley Howe and Mr and Mrs Jno. A Howe motored to Port Elgin on Sunday to visit the former's father who is very ill.

The aeroplane that passed over here on Saturday on its way to Toronto caused quite an excitment.

Misses Alma and Olive McGillivary spent the holiday at their home here.

Miss Vera Keyes of London is visiting her friend Miss Nellie McGillivary.

Miss Edna Cumming was home from Stratford over Thanksgiving.

Mr and Mrs Jno. Hammond, Mr and Mrs Wm. Archer motored out to Mr Jas. Archer's on Saturday.

Freddie Stafford visited his brothers on Sunday.

Mr Wm Mass met with a mishap on Saturday. While repairing the engine of Mr Geo. Ribey's threshing machine he had his hand caught and badly bruised.

Corn cutting is in full swing again.

CASTORIA

TURNERS

Mrs Adam Cairns attended the funeral of her aunt at Galt.

Mr Albert Oler was visiting friends at Parkhead.

Miss Mary Davidson is very ill at present.

After so much drought the recent rains are very welcome. Roots were much in need of moisture, and most of the farmers have now started ploughing.

There were five car loads of cattle shipped from here last week.

Mrs Wm Keyes, daughter and son of London have been visiting friends here.

DANGER TO SYSTEM UNLESS ACTION IS TAKEN

Ignorance alone can excuse neglect of the health when all indications point to Kidney trouble. Everyone should know that from the hour the Kidneys fail to remove the poisons from the blood stream, these poisons are accumulating ready to cause sickness, pain and suffering.

How are you to know that the system is in danger from poisoning? One or more of the following symptoms should leave no doubt in your mind. If you are the victim of backache, pains in the back or sides, or Lumbago, be sure nature is calling for better Kidney action. Take Gin Pills.

At the first twinges of Rheumatism, swollen ankles and joints, or any other manifestation of uric acid poisoning, take Gin Pills. Dozens of Testimonials prove Gin Pills to be the sovereign remedy.

Take the warning given by constant headaches, restless nights, dizziness when you stoop, frequent chills, bladder urinary trouble, or constipation, and turn to the remedy which is so sure that it is sold on the money-back guarantee—Gin Pills.

Gin Pills are sold by all dealers—50c. a box or 6 boxes for $2.50. A free sample will be sent if you address your request to the National Drug & Chemical Co. of Canada, Limited, Toronto; or to the U. S. address, Na-Dru-Co Inc., 202 Main St., Buffalo, N.Y. 111

"Let Me Help You Carry the Burden, Mother"

"If Canada fails us in October, we must curtail many of our activities."
Sir ARTHUR STANLEY, Chairman, Executive Committee, British Red Cross.

It now costs $300,000.00 a week to carry on the work of the British Red Cross, or $16,000,000.00 a year.

Every minute of the day and night it costs $30 to min... the sick and wounded and dying.

Last year Ontario's magnificent contribution paid for the entire work of the British Red Cross for nearly six weeks.

This year, in view of the greater need, it is earnestly and confidently hoped that Ontario's contributions will be as great proportionately as the magnificent offering of last year.

Our trust is, that the Citizens of Ontario will give generously to this noble cause on—

"OUR DAY", OCTOBER 18th

A Few Facts about British Red Cross Work.

The British Red Cross Society is the only institution which carries voluntary aid to the Sick and Wounded of the British forces on land and sea in every region of the War.

Its work is therefore the concern of all classes of British subjects, whether living in the British Isles, in the Dominions and Colonies beyond the seas, or in foreign countries.

—*40 Voices* from Walkerton Philharmonic Society give concert in Town Hall, Paisley, Oct 25th, under auspices of Knox Church Branch of Patriotic League—for Red Cross purposes. Don't miss this.

Joined the Signallers

Mr Ross Laidlaw went to Toronto last week and enlisted with the Divisional Signal Corps. He will go to Ottawa shortly for training.

The Sock Shower

Don't forget the W P L sock shower for the soldiers. Call at public library for yarn, and have a pair knit in time for the Christmas parcels.

Memorial Service Deferred

On account of the unavoidable absence of Revs Little and Neilson from town on Sunday next, the unveil memorial service in honor of the late Pte D J Bain is deferred until Sunday, Oct 28th.

160th Soldier Back

Pte Dune Bell, who left a 200 acre farm in Saugeen and signed up with the 160th Battalion, has arrived home from England where he has been on the sick list of late. After a short furlough he will report for active service again.

Died Suddenly

Mr John Kimpton Matthews, aged 73, died very suddenly on Saturday night at the home of his daughter, Mrs E C Wilkins, on North St. The deceased had been suffering from asthma and dropsy, but his condition did not appear to be serious, and on Saturday night he retired to his room as usual. In the morning, not hearing him moving about, Mrs Wilkins went to his room and found her father sitting in his chair dead. Mr Matthews was 73 years of age. He was born in Luton, Suffolk, England, and in 1871 came to Canada, and lived in Toronto until a few months ago. Another daughter, Mrs Prior, lives at Seagrave, Ont. The funeral took place on Tuesday afternoon to Stark Vale cemetery.

Paisley to Raise $1,000 for Red Cross

At the call of the Reeve a public meeting was held Tuesday evening, at which arrangements were made for collecting our annual contributions to the British Red Cross Fund. It was decided that a house to house canvass should be made on Thursday, Oct 18, also that we should aim to raise the sum of $1,000, which is about one third more than last year. You are requested to have your contribution ready on Thursday forenoon, when one of the following committees will call upon you: S F Ballachey and A B J Simons; H B Putnam and Dr Allen; J A Logie and J Hops; H McKerracher and S F Ballacher; J H Steele and W E Barnett; Alex Fraser and J A McArthur. Everybody should help to make this little whirlwind campaign a complete success.

Death of Mrs. J. A. Bannerman

After an illness extending over several months, Mrs John A Bannerman, of con B, Elderslie, passed away on Thursday last. The deceased was a native of Elderslie, spent all her life in the Tp., and was esteemed as a kindly, gentle and amiable person. She was a daughter of the late Richard Winch, of 10th con, and was 54 years of age. She was married in 1885. The bereaved husband, with their one son Johnston and daughter Emily have the sympathy of a very wide circle of friends. The funeral on Sunday was very largely attended, the services being conducted by Rev G C Little of Knox church, of which congregation the deceased had long been a member. Interment was made in Salem cemetery. Six brothers of deceased are living: Henry Winch, of 4th con Elderslie; Alfred and Wesley, of Sullivan Tp; Fletcher and John, of Lion's Head; Steven, of Barrow Bay; and one sister in Michigan.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

"The Hardware Store of Better Values"

Pte. D. J. Bain Dies of Wounds

Following the appearance of his name in the casualty list as seriously wounded, the people of Paisley took deep interest in the condition of Pte D J Bain. Cable messages received last week by his mother, Mrs E Bain, stating that he was improving, came as good news to the whole community. When it was learned on Monday forenoon that he had succumbed to his wounds, the news was not readily believed until confirmed by further report. It was on Sept 14th that Pte Bain was wounded, and his death occurred on Oct 11th, in the general hospital at Camiers. The deceased had been thirteen months in the trenches, and was wounded previously but recovered. He enlisted in November, 1915, with the 95th Battalion, which trained in Toronto before going overseas in April, 1916. Dune was one of the most cheerful of mortals, and could see the bright or humorous side of every situation. Whether in civilian or soldier occupation, he was the life of the company he was in. For months he bore a charmed life on the battle grounds, escaping without a scratch at different times when every other man about him was hit by bullet or shrapnel. Shortly after his school days in Paisley were over, Jimmie went west. At Neepawa he was for five years employed in a hardware store, and then went to Battleford, where he was for three years manager of a business in the same line. Among his business associates and the patrons of the stores he became as popular and well liked as among his boyhood friends in the old home town. His death is a very severe blow to his mother, to whom the sympathy of all is most sincerely extended, also to the three sisters Mrs Sinclair of Hamilton, Miss Hazel, now in California and Miss Effie, in London.

CARD OF THANKS

Mr E Wynne and family desire to thank neighbours and friends for the many expressions of sympathy and condolence extended to them in their recent bereavement.

CARD OF THANKS

Mr John A Bannerman and family desire to thank their neighbours and friends for the kindness and sympathy extended to them in their recent bereavement.

Brown—Hagedorn

A very pretty wedding took place in Paisley on Monday, Oct 8th, at three o'clock in the afternoon, when Laura, eldest daughter of Mr and Mrs Wm Hagedorn, became the wife of Arthur Brown, son of Mr and Mrs Thos Brown, Paisley. The marriage took place in the Church of the Ascension, Rev Mr Diehl officiating. Only the immediate friends of the contracting parties were present. After the ceremony the wedding party motored out to the home of the bride's parents, where a well prepared wedding dinner was in readiness for them, which was much appreciated and enjoyed by all, the dining room being beautifully decorated for the occasion. The same evening Mr and Mrs Hagedorn gave a reception in honor of the newly-weds. About fifty invited guests were present, and a most enjoyable time was spent in music, singing and dancing. The bride received many handsome and useful presents which goes to show the high esteem in which she was held in the community. The following day the young couple left for their new home on the groom's farm near Paisley, where they will be followed by the best wishes of their many friends for a happy and successful voyage through life.

To the People of Saugeen

The British Red Cross has appealed to us once more for assistance in carrying out its beneficent work for our fighting forces. The total expense of the British Red Cross for the first year of the war was $8,500,000, for second year over nine million, and to-day it is $300,000 per week, or sixteen million per year. These figures give force to the statement of the chairman of the executive of the British Red Cross:

"If Canada fails us in October, we must curtail many of our activities."

What will Saugeen's answer be? Is it our desire that any of these noble men should suffer through any lack of liberality on our part. Red Cross work in its every phase is a splendid manifestation of our broad sympathy with suffering.

In 1915 Saugeen contributed $500, in 1916 it was $1,000. What will we say for 1917? We leave it to you, feeling confident of the result. On Thursday, October 18th, you will be asked for a contribution. Give us in the Providence of God you have been blessed.

G CRAMPTIN, Reeve

Farm Crop Queries

Conducted by Professor Henry G. Bell

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell

F.McC.:—I have a gravelly, sand soil, on which I want to sow rye and sand vetch, and then sow sweet clover. When should I sow the sweet clover, in the fall or in the spring, and how much seed per acre?

Answer:—I would advise your sowing the rye in the fall and the sand vetch in the spring. This can be done as soon as the ground is firm enough to work. A light harrow will cover the seed. If the soil tends to be open, it will be well to roll the rye. Follow with a light harrow, preceding both with the sowing of the seed. As to amount to sow per acre, ¾ bushel of vetch seed along with about 10 lbs. of sweet clover to the acre should give a good stand.

H.C.H.:—I have 10 acres plowed intending to sow winter rye, but it was not ready in time. I want this field in a cash crop. What do you think of spring rye?

Answer:—If you are in a good wheat section, why not sow spring wheat instead of spring rye? Statistics show that you could expect a larger yield and wheat is selling at a higher price than rye. In order to make a good stand, I would advise your drilling in about 200 lbs. of fertilizers at the time you are seeding the wheat. Apply fertilizers carrying from 2 to 3% ammonia, 10 to 12% phosphoric acid. It will insure a good stand of grain and will increase the yield and better the quality of the crop.

A.B.:—I would like to have you give me information as to the culture of horseradish, and how they market same. I notice it is quoted in the markets, at so much per dozen, would that be the roots?

Answer:—For best results in growing horseradish, the soil should be plowed deep, early in the spring. As to rule the rows are 24 to 30 inches apart and the space between the root settings are 15 to 18 inches. These are planted from 3 to 5 inches below the surface. In preparing the ground, well rotted manure should be worked deeply into the soil. Top dressing with manure tends to cause the branching out of the roots. The yield of the roots can also be improved by adding from 300 to 500 lbs. to the acre of a fertilizer carrying 3 to 4% ammonia, 8 to 10% phosphoric acid and 1 to 2% potash. These should be worked thoroughly into the soil. Inter-cropping is often a profitable practice in growing horseradish; that is, a crop that can be harvested early is planted between the rows.

I assume from looking up the market reports that the quotation is per dozen roots. These are known as cuttings or sets. I do not find any standard of weight nor size of bundle.

BEDTIME STORIES HAVE IMPORTANT PART IN CHILD TRAINING

By Irene Stillman.

Personally, I look upon stories as very efficient "mothers' helpers" and consider them invaluable in child training, for I have known them to tame the wildest and most unruly of kiddies. Therefore when little Mary Ann or Johnny, Jr., comes to you with the world-old childish plea of "Tell me a story, please," look not upon the time conceded as wasted upon an unproductive amusement, but realize thoroughly that before you is an opportunity to give youth a hypodermic of almost any virtue which you would like it to have under its tender skin and so mold the coming generation nearer to your heart's desire.

A story may be made the sugar coating of a moral pill which "put over" upon the young folk who beg for the amusement will, in further slang, be "good for what ails them!"

The bedtime story is hung with medals! Its possibilities are many. It soothes overstrung nerves, comforts juvenile distress and quells juvenile rebellion, and is such a skilful nurse altogether that it frequently succeeds in tucking the unwilling child into bed when, without its timely assistance, mother would have failed. It acts, properly selected, as a quietus for all the turbulence of the long day, and so brings the childish mind into an ideal state for slumbering peacefully and restfully throughout the night. It is, of course, understood that bedtime stories particularly should not be of the exciting kind or contain any ferocious dragons, giants, pirates or similar characters which might haunt the little folk's dreams.

As a rule, I thoroughly disapprove of bribes, but the story will often prove a most seductive and harmless reward for good behavior while a rebellious child is being undressed for bed or dressed in the morning. The story should be told during the process. Thus no time will be wasted by the mother and the child's concentrated attention upon the story will make him or her easier to handle.

Peacemakers.

And the opportune story is a peacemaker. If you can get children to laugh together after they have quarrelled or if you can get your little boy or girl interested in one of your stories after you were compelled to punish, any subsequent sullenness or unpleasantness will quickly disappear under its genial influence.

I have known fory-telling to bring parents and children into closer companionship and even comradeship and to even draw the children themselves closer together when they are inclined to drift too far apart in their amusements and the selection of their friends, thus endangering the family unity (although this does not mean that I do not approve of outside and individual interests.) One wise mother who had a small family of quarrelsome children, and who could not spare the time to watch them closely enough to prevent quarrels, taught them to tell stories among themselves, impressing upon them that the story-teller holding the floor should never be interrupted or corrected. This gave the children a common interest and made each member of the group interesting to the others. The quarrelling gradually diminished until normal, if not perfect, harmony was established.

Besides, the child who can himself relate tales of inspiring a poise that will serve him well in his future business and social life. The child story-teller should have some little training in the art, if that is possible. And it usually is, for there are many excellent books upon the art of story-telling that can be obtained at the libraries or, better still, at the book shops, so that one may have such a book to keep and refer to from time to time.

An instinctively cruel child, where animals were concerned, was taught kindness to them and even love for them and the desire to, protect by effective animal stories related to him by his elder brother. The same little lad was taught to love nature by stories of "green things agrowin'."

The Pueblo Indians have some excellent ideas in child training, although, on the other hand, they have, of course, methods which we would find impossible. But that custom of giving their children reasons for the commands laid upon them shows great consideration. These reasons are usually in the form of legends and ancient tales, there being one or more to fit almost every case wherein the child must give obedience. So effectively do the Indian parents tell these revered legends of their race that a sharp impression is left upon the little injuns' minds and characters. I would say that the wily Indian parents have the happy and wise habit of sugar-coating their pills into tempting goodies!

Right Kind of Stories.

The right kind of stories serve to give breadth to a child's point of view. They serve him in lieu of experience, and many a little lad or maid hard beset with a problem he must solve alone has come to wise decision because of following the course of some beloved character in verse or story. "I endeavor," says one successful mother, one who is fond of telling her young folk stories, "to tell my children tales, true and invented, that will stimulate their imagination, instill within their minds and hearts the love of good literature, and altogether so enrich their intellect that they will find themselves good company when each is obliged to be alone at any time." The latter idea of the mother's is one that should be remembered and practiced by the mother of the poor little "only child" who must now and then, at least, be without playmates. And this story-telling mother goes on to say: "I tell my boys and little women stories of courage, physical and mental, of ideals upheld and even suffered for and died for. Through my story-telling I want them to have good thoughts and true ideas their hearts —and, what is more, express them in their lives."

Very often, too, a distasteful study can be made interesting by linking up and relating incidents in the history of its evolution and biographical sketches of the men who have been vitally concerned in its development. There are studies, too, which can be subtly taught in story form, at least in part, where the young student fails to take them in allopathic doses.

Poor indeed is the little one who has no story-teller at its back and call. You may not be an expert, but some scatless child will give you its ears, eyes and the love of its heart but to hear you relate a tale of your own youth, seem it ever so prosaic to you. Yes, tell the children stories by all means, selecting them ever with the thought of their influence upon the lives and characters of the small listeners!

Straw manure plowed in just previous to the sowing of grain will not tend to improve the seed bed as a germinating place; it allows the soil to dry out too readily.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Perplexed Mother:—Raw milk quickly develops bacteria, and to overcome this and prolong its keeping qualities it is necessary to pasteurize it. There is a regulation apparatus that comes for this purpose, but you may improvise your own outfit and accomplish successful results. First and foremost a mother must realize that every dish, spoon, bottle and utensil that is used in preparing the baby's food must be absolutely clean, surgically clean, if you will. To accomplish this it is necessary to use plenty of boiling water.

Fill the milk into sterilized bottles. Stop the top well with absorbent cotton and put in a kettle deep enough to hold the bottles. The kettle should be two inches deeper than the bottles. Fill the kettle three-quarters full of cold water and stand a thermometer alongside of the milk bottles. Put over the flame to heat it. Heat until the thermometer registers 167 degrees Fahrenheit, then turn the flame low, so that you can maintain this temperature for half an hour. Remove from the fire and cool rapidly, taking care that the bottles do not break. The kettle should be kept for this purpose alone, and it will greatly facilitate the work of preparing baby's meals if all the utensils, bottles, etc., are kept in a place of their own, away from other household utensils.

If baby is restless, feverish and appears unwell, call a physician. If necessary, cheerfully neglect the household duties to give baby the necessary care. Give the baby a spoonful of boiled and cooled water. Use a piece of absorbent cotton or your finger to wash the baby's mouth Do this frequently—in fact, after each feeding. It will refresh the child.

Economist:—1. The recipe for the war cake follows. It is made without butter, eggs or milk. Mix one cupful of brown sugar, one-quarter cupful of shortening, cupful of boiling water, two cupfuls of seeded raisins and a half teaspoonful of salt. Boil these five minutes. Cool and add one teaspoonful of cinnamon, a half teaspoonful of mace, one-quarter teaspoonful of clove, one teaspoonful of soda and two cupfuls of flour, which have all been sifted together. Beat well and put into greased, paper-lined bread pan. Bake in a slow oven one hour. 2. Apple butter, such as our grandmothers used to make, requires quarter-peck apples, 2 quarts water, 1 cup vinegar, 1 cup brown sugar, 3 tablespoonful cinnamon, 1 tablespoonful nutmeg, 1 teaspoonful allspice, 1 teaspoonful cloves. Cut the apples in pieces and add the water. Cook until soft, then rub through a fine sieve or colander. Do not peel the apples. Cook the vinegar, sugar and spices until very thick, stirring constantly. Put an asbestos mat under the pot to prevent burning. Pour into pots or crocks and cover with paraffine. This is fine for the children and grown ups. It is delicious on mush, cereal and hot cakes. It is excellent for tarts, very good between layers of a cake, and delicious when combined with a cream cheese, seasoned with salt and pepper and spread on crackers, as an appetizer at social affairs.

The Sunday School

INTERNATIONAL LESSON OCTOBER 21.

Lesson III. The Temple Rebuilt and Dedicated—Ezra 3. 8-13; 6. 14-18

Golden Text—Psa. 100. 4.

Ezra 3. 8. Second year—Of the return inaugurated in the first year of Cyrus (Ezra 1. 1). Zerubbabel—See comment on Lesson for October 14, verse 8. Zerubbabel appears here as leader in peculiar affairs; he may have succeeded Sheshbazzar as governor of Judah. Jeshua—The ecclesiastical leader (Hag. 1. 1. 12, 14). Levites—The men performing the less important functions at the sanctuary (Numbers 18. 1-7). The body appointing the Levites as overseers consisted of the civic and ecclesiastical leaders, the men performing priestly and other functions at the sanctuary, and the lay portion of the community. Twenty—The age of service varied at different periods (Num. 4. 3; 8. 23-26; 1 Chron. 23. 27). Since only a small number of Levites returned a relatively low minimum age had to be fixed.

9. The general thought of verse 9 seems to be that the Levites accepted their appointment, but the present text is so corrupt that the details are more or less uncertain.

10-13. The laying of the temple foundation was celebrated with great rejoicing. They set—Better, with margin, "the priests stood." Apparel—The robes of office. Trumpets—The priests were specially commissioned to blow the sacred trumpets (Num. 10. 8). Sons of Asaph—The reference is to that part of the order of the Levites whose business it was to furnish the music. According to Ezra 2. 41 the sons of Asaph were singers. David—Though all older documents are silent on the point, in postexilic times the institution of the entire elaborate temple service was credited to David. One to another—Antiphonally. The words quoted furnish simply the refrain. Old men—Fifty years had elapsed since the destruction of the first temple. When the older men, who had worshiped in the former temple, realized that at last a new house of worship was to be provided, they could not control their emotions. Tears of joy flowed in abundance. The priests blew the trumpets, the Levites played the cymbals and sang; the old people wept, and the younger ones shouted joyfully and trumpeted loudly, so that the noise of the tumult of sounds carried to a great distance.

Ezra 6. 14-18 narrates the completion and subsequent dedication of the temple. Elders—Includes all the leaders in the community life. Build, etc.—Is the subject of the verb, carried the enterprise to successful completion. Haggai . . . Zechariah—The manner in which they assisted may be seen from the books bearing the names of these two prophets. Cyrus—See Ezra 1. 1. Darius—The proclamation of Artaxerxes—Reigned from B. C. 465-425; therefore can have had no part in building the temple which was completed in B. C. 516 or 515. The reference to Artaxerxes may be a later edition. This house was finished—Upon the completion of the work a joyful service of thanksgiving and dedication was held. Offered—The number of sacrificial animals was small as compared with those offered at the dedication of the first temple (1 Kings 8. 5, 63). Sin-offering—In acknowledgment of the people's sins and of their dependence upon the divine favor. Divisions—Courses—For the details see 1 Chron. 23-26, and compare Luke 1. 3, 8, 9. Book of Moses—See Num. 3 and 8.

Bedtime Stories

Ruth's Rainy-Day Box.

Ruth waked that morning with a feeling that something lovely was happening, and it was. The raindrops were pattering on the window, playing tag and leapfrog as they scurried down. "How do you do?" to the sleepy flowers.

Ruth dressed like a whirlwind and ran down to remind her mother that it was raining—and, best of all, it was Saturday!

"So may telephone Louise to come over and spend the day, mother?" she asked eagerly. "And may we have luncheon in the playroom and open the rainy-day box?"

"Yes—three yeses," said her mother, laughing. "But first let's calm down enough to enjoy a good breakfast."

A few blocks away Louise was so delighted with the weather and the day of the week that if anyone had asked her what she ate for breakfast she would probably have replied, "Autumn rain—and tea at Ruth's."

It was great fun to run along with the raindrops pelting her umbrella and blowing in slyly underneath. Rosy and laughing, she reached Ruth's home and slipped from her dripping raincoat like a gay butterfly from a snug cocoon.

"Mother thought of the rainy-day box first," Ruth told her guest, as she led the way to the big playroom, which was cosy with rug rugs and nursery pictures on the walls. "Uncle John is a carpenter, you know, and he built my beautiful box for me, just here under the windows."

Louise exclaimed over the new window seat, which was piled with pretty cushions, making a real cosy corner, where one could enjoy a storybook or look down into the great maples. "Now we'll pile the cushions into this chair and open the box!" cried Ruth, merrily. "It's a heavy lid, but together—there! See my rainy-day things!"

With little giggles and cries of delight the girls bent over the treasure box, and with quick fingers brought out anything they chose. In one corner were old magazines, picture books, blunt scissors and tubes of paste. There were many paper dolls, a set of flowered dishes,—even tiny glasses with a water pitcher,—and a little blue Japanese luncheon cloth and napkins. In another corner were folded two quaint old gowns and some old-fashioned bonnets, which were grandma's contribution to Ruth's new box.

"First," explained Ruth, "we'll cut out pictures and paste them on these big sheets of cardboard that mother put in—if you want to—"

"Oh, yes!" agreed Louise, hastily. "And here are crayons to color with."

It was a delightful, delightful way to snip the pictures from magazines and then paste them as neatly as possible, leaving no sticky paste to show. Noon came long before the girls were ready for it, although they found themselves hungry enough when Mrs. Day appeared with a tray of goodies and told them to set the round tea table.

There was milk in the tiny glasses, and in a pitcher besides; there were sandwiches, fruit, and such lovely little cookies shaped like birds' nests, only instead of eggs there was jelly in the middle.

After luncheon, which took a long time, with washing and putting away the dishes, the girls played with paper dolls. But the best game was to come; they had saved it for the last, just as they had saved the tastiest cooky.

When the little clock struck three, they put away their books and paper dolls, the scissors, the paste and all the other things in the box. There was only an hour left, and they quickly "dressed up." Then, as Mrs. Morning Glory and Mrs. Wild Rose, they lived in opposite corners of the room and called on each other, taking along large, well-behaved families of children.

Some of the Morning Glory and Wild Rose children were unbreakable, some merely of rags; the youngest were of celluloid or rubber.

"O dear!" sighed Louise, as she made ready to go out into the wet, gray twilight. "Why are rainy days three times as short as others?"

Ruth eyed the little clock with a frown, as if she rather blamed it for giving wings to the hours.

"Well, there's one good thing," she said happily. "Grandma is a fine weather prophet, and she thinks it is going to be a wet Autumn."

Sheep Notes

It is estimated that it costs $34 to feed a dog one year. On this basis some farmers could keep two more cows or ten more sheep with no more general expense to the farm, if they dispensed with their dogs, as it only costs about $60 or $70 to feed a good cow, and five sheep can be kept on the same amount of food as one cow. The neighbors' sheep would be safer, too.

If you feed your lambs by the thimbleful you can not expect to get money from them by the peck measureful. When running on fall pasture it takes from two to three bushels of corn per hundred head when on full ration.

Some method of marking the ewes when bred is advisable. A simple method is to mark the ewes with paint, making one mark on the shoulders of ewes bred the first week, two marks for those of the second week, etc. As the lambing time approaches, the ewes may be separated and placed in suitable quarters. Where the ram runs with the ewes a good scheme is to paint his breast each day and separate the ewes as soon as they show paint on their fleeces. The color of paint can be changed every ten days, and the herdsman can tell how sure the ram is.

Horse Sense

About the first thing some folks do when they go to buy a horse is to hitch him up to a carriage and take him down the road for a spin. The main thing seems to be, "Can he trot a blue streak?" Lets more common sense in testing the animal at the plow, on the mower, at good, honest farm work.

Horses need wider and more exclusive stalls than cows. Enough width is necessary that the horse can lie down and stretch his legs, but not enough to allow him to roll and tear down the stall.

The natural method of avoiding dry, contracted hoofs is to place the horse on a good rich pasture after a heavy rain. Unfortunately it is frequently not practical to give a horse free range according to weather conditions. The best substitute for nature's own provision is to stand the horse in a strongly built trough of water or in a clay puddle from two to four hours once a month.

Give the team a pail of water in the middle of the forenoon and afternoon when doing the fall plowing. Water refreshes the horses as well as the man.

As far as the light-legged horse is concerned, he is practically doomed. The motor car has taken his place. For a number of years the heavy horse will be in demand. He is keenly in demand at the present time.

Fan out all light and shrunken grain as a first step toward selecting seed for the Fall sowing of wheat.

WHAT TO DO FOR DIABETES.

Most adult diabetics would do well if they would obey their doctor's orders. But it is a very considerable medical experience that such patients are hard to control; they are very prone to do as they please as soon as they get beyond the doctor's observation. Every diabetic must be under a doctor's constant care. Each must be treated according to his own peculiar constitution. Worry, excess, great exertion, exposure must in all cases be avoided. Tea, coffee, and, indeed, all food must be sweetened with saccharin to be had in 100 tablet bottles from druggists instead of sugar. The bowels must move once a day. There are medicines appropriate to the individual case which the family doctor must prescribe. And the diabetic dietary must be faithfully adhered to. Such an one is the following:

Soups or broths of beef, chicken, mutton, veal, oysters, clams, terrapin or turtle (not thickened with any farinaceous substances) beef-tea.

Shell fish and all kinds of fish, fresh, salted, dried, pickled, or otherwise preserved (no dressing containing flour).

Eggs in any way must acceptable.

Fat beef, mutton, ham or bacon, poultry, sweetbreads, calf's head, sausage, kidneys, pig's feet, tongue, tripe (all cooked free of flour, potatoes, bread, or crackers).

True gluten—gum gluten, for instance, gluten foods of known gluten percentage, whole wheat containing gluten beyond that of ordinary farinaceous foods (so-called gluten breads sometimes contain quite as much starch as ordinary bread), oatmeal, almond bread or cakes.

String beans, spinach, beet-tops, chicory, kale, lettuce plain or dressed with oil and vinegar, cucumbers, onions, tomatoes, mushrooms, asparagus, oyster plant, celery, dandelions, cresses, radishes, pickles, olives.

Custards, junkets, jellies, creams (all without sugar), walnuts, almonds, filberts, Brazil nuts, cocoanuts, pecans.

Tea or coffee (without sugar), pure water, peptonized milk, Bulgarian sour milk, lemonade, seltzer water with lemon juice (no sugar).

Avoid: liver, sugars, sweets or starches of any kind, wheaten bread or biscuits, corn bread, barley, rice, rye bread, arrowroot, sago, macaroni, tapioca, vermicelli, potatoes, parsnips, beets, turnips, peas, carrots, melons, fruits, puddings, pastry, pies, ices, honey, jams, sweet or sparkling wines, cordials, cider, porter, lager, chestnuts, peanuts.

QUESTIONS AND ANSWERS

Systemic Infection.

I have been troubled the past year with my nerves. Have headache quite frequently, with pains just back of my ears. And my ears run wax more than ever in the last few months. My eyelids become puffy and my ankles swell. I seem to sweat very easily and lack my usual ambition.

Answer—Ears never run wax; there is a purulent discharge, something more than nerves. There is an infectious process going on in your system. See a doctor at once, lest you come to a serious pass. You have neglected the signs of ear trouble, probably also of the mastoid process behind the ear.

"To help make sure of the germination of the sown seed, roll after the drills and then harrow lightly to ensure a top mulch.

Mrs. Progress and Mrs. Oldways

"Whatever are you going to do with all those old vaseline jars?" said Mrs. Oldways to her neighbor.

"I am making quince jelly," replied Mrs. Progress, "and I'll put some of it into these jars. I save both these and other jars throughout the year, and find them just right to hold jelly or jam for the children's lunch baskets or to send to a sick friend. This year I am filling more than ever, for they will be so nice to put in the boxes that we send to our soldier boys."

"How I wish I had known about them sooner. Can you fasten them securely?" asked Mrs. Oldways.

"Yes, indeed," said Mrs. Progress, "I seal them with paraffin just as I do my jelly tumblers, and, when they are cold, I screw on the metal tops, put labels on them and the work is done."

"Well, I'm glad I came in; I'm going to hunt up all the little jars I can find. I want to fill some for the soldiers, too." And Mrs. Oldways hurried home.

Character Building.

It is so easy and pleasant to govern a child that is naturally yielding and so difficult to deal with one that is wilful and obstinate, that instead of training the latter's will he is often dealt with severely, and the yielding one is praised for what is really a defect of character. Yet, what natural gifts or acquired knowledge can compensate for feeble will power,—a readiness to succumb to every strong influence, a dependence on others that is wearying to them, an irresolution or vacillation that defeats every purpose as soon as it is made and prevents steady action in any direction? Though one can not substitute a strong will for a weak one, or adopt settled purposes, he can cultivate that portion of his nature which brings them forth. Every resolve made and kept, every intention carried out, makes the next one easier. "Sow an act, and you reap a habit; sow a habit, and you reap a character; sow a character and you reap a destiny."

Perhaps It Is.

Freddie—It's always in damp places where mushrooms grow, isn't it, papa? Papa—Yes, my boy. Freddie—Is that the reason they look like umbrellas, papa?

Little Cinderella

She Was Used As a Foil For a More Fortunate Cousin.

By H. N. EGBERT.

Cinderella was a foil for Beatrice. That, perhaps, was the real reason why Mrs. Lanham, who had never been known to do an unselfish act, surprised her intimates by asking her little orphaned niece to make her home with her after her brother's death.

Esther and Oliver Benton had grown up together in the same home in Ohio, and Oliver had supported his widowed mother and sister until Esther's brilliant marriage to a wealthy lawyer. The Lanhams had gone up in the world and when Mr. Lanham died he was one of the richest corporation lawyers in the country. Esther mourned her husband decently for a year; then she moved to New York and soon became a member of the rich and not very intellectual society that finds its doings recorded daily in the newspapers.

Why Mrs. Lanham should have taken little Cinderella—whose real name was Elizabeth—into her home was a mystery until Mrs. Henthnam-Jenkins solved it.

"Why, my dear, the reason is perfectly obvious," she said to a friend. "It is only necessary to look at the children's faces. Did you ever see a more glaring contrast between beauty and homeliness? Beauty and the Beast, I should call it; and that charity child won't improve with years, either."

Elizabeth heard it and ran away to cry. But she had always known instinctively that the difference between herself and Beatrice was as that between darkness and daylight. Beatrice had an abundance of flaxen hair, merry blue eyes, a contagious laugh, and a figure which gave promise of that quality which is called "svelte." Elizabeth was thin and awkward and lanky, and nobody ever stopped to admire her as they did her cousin.

Perhaps this was partly due to the fact that Elizabeth wore Beatrice's cast-off dresses, after the trimmings had been removed and a certain dowdiness imparted by Mrs. Lanham's deft fingers. That excellent woman knew the value of a foil for her daughter, particularly now that Beatrice was of a marriageable age. Beatrice was kinder. Once she gave Elizabeth one of her cast-off ball gowns.

"Some day you may be invited to a ball," she said, with innocent scorn, "and then you will be glad to have something to wear. But don't tell mamma or she will be angry."

She did not know that little Cinderella treasured in her room a pair of Beatrice's old slippers which she had rescued from the lumber room just as its contents were about to be thrown away. In the seclusion of her little attic chamber she would dress herself in the gown and in imagination she would be the belle of some ball, the admiration of all eyes. But nobody ever invited Cinderella to a ball; first, because she was only a sort of companion and never met anybody; secondly, because it was understood that after Beatrice's marriage she was to go out into the world and work for her living.

And that date, toward which Cinderella looked forward with rapturous anticipation, was likely to be long delayed, if one could believe signs. Lester Martin had been a frequent caller at Mrs. Lanham's house of recent weeks. Martin was the son of old Roger Martin, the banker, but he was more than that, although it counted for less with Mrs. Lanham—counted for nothing at all, in fact. He was the most famous architect in America and was the man who had designed the new fetes for the state capitol. He was always very kind to Elizabeth, and because he was the only person who ever noticed her she longed for a sight of him. And one day something very surprising happened.

Lester was calling at the Lanham home, and Beatrice, having heard the news from her maid, was hurrying into her reception gown. Cinderella was all alone. She was just going upstairs—for Mrs. Lanham did not like her to receive her guests—when she met Lester at the door.

"Why don't I ever see anything of you, Miss Benton?" he asked, detaining her.

Elizabeth did not know what to say, so she said nothing.

"You dear little Cinderella," said Lester Martin, and bent down, and kissed her.

How she got out of the room Elizabeth did not know, but she was in her room at last, and sobbing as though her heart would break. She cried wildly for hours, until Beatrice came in and found her there.

Beatrice was too much excited to notice Elizabeth's red eyes. She began chattering about Lester.

"Mamma thinks that he is in love with me," she said. "She says he wouldn't come here so much if he wasn't. And it will be such a fine match for me, for his father is worth a cool ten millions, and I shall have carriages and autos and go to Paris each year and—"

"Do you love him, Beatrice?" inquired Elizabeth.

"I don't know. I guess I could," said Beatrice, whirling about. "Mamma says you needn't come down tonight because we are having guests."

She came back presently. "Do you know old Roger Lester is giving a fancy dress ball next month?" she asked. "Yes, the invitations have just come. And, oh, I forgot to say that there is one for you. Mamma has written accepting for me and declining for you."

When she was gone the girl gave way to an access of unrestrained grief. For the first time rebellious thoughts came into her mind. Lester loved her. Else why had he kissed her? No man ever kissed her before. To kiss meant, in her simple view, to plight one's troth for ever. Or had he been playing with her? It was obvious that he meant to marry Beatrice; but then he must have had a passing affection for her. Suddenly an amazing plan took root within her. She would go to the ball. She had never been to a ball, but why should she not go once? It was to be a fancy dress and nobody would recognize her, masked and disguised. There was Beatrice's dress, but that had been altered and Beatrice had so many dresses that she would never remember that one. And there were Beatrice's slippers.

She trod on air during the next four weeks. She went so happily about her duties that more than once she

Would Dress Herself in the Gown.

caught sight of Mrs. Lanham surveying her with amazed disapproval. At last the night of the ball arrived.

"You need not sit up for us," said Mrs. Lanham condescendingly. "We shall probably not be back until late, and you must be up early in the morning to accompany the parlor maid to the station to put her on the train. Poor Mary could never find her way about the streets alone."

Mary, the parlor maid, was going home to pay a visit to her sick mother.

But Elizabeth did not care, for her heart was beating wildly from sheer ecstacy. When the auto rolled away she hurried upstairs and slipped into the ball dress and slippers. Then, with her head and shoulders shrouded in her wrap she went into the street and entered a street car.

Nobody stopped her at the door. Masked, among a hundred other masked women, her presence excited no comment. She recognized Beatrice, in her creation of shiny white, and her aunt, seated among the chaperons and watching her daughter with an expression of admiration in her eyes. But nobody dreamed that Cinderella was there. It was ten o'clock. Two hours—and then she must go home as silently as she had left.

The music intoxicated her. Elizabeth could dance divinely. The little drudge was in heaven as one partner after another took her upon his arm and swung her out among the dancing couples. But, when she saw Lester approach and gravely ask her, her head swam and her eyes filled with sudden tears.

"Shall we go into the conservatory?" he asked, when the music stopped. He offered her his arm. At the door of the ballroom they passed Beatrice and her mother. Their eyes rested on her, and with a sudden terror Elizabeth perceived that she was recognized.

Mrs. Lanham rose to her feet with an exclamation of anger, and, overcoming herself with an effort, scowled at her. Elizabeth trembled with fear. She had not calculated upon the aftermath.

"What is the matter?" Lester asked, as they sat down. "You are not feeling well? May I get you a glass of water?"

She shook her head. Lester placed his hand upon hers.

"Do you think I do not know who you are even if you do wear that mask? See, I can guess. You are Miss Benton, and you ran away to the dance because Gorgon would not let you go."

"And I can never go home," said Elizabeth in panic. "She recognized me. I had never been to a ball before and I could not bear not to just once. I don't know what I shall do."

"I'll tell you," said Lester. "You need never go home again if you will marry me."

He mistook the look in her eyes.

"O, Cinderella," he cried, stretching out his arms longingly, "I love you with all my soul. It was you I went to see, not Miss Lanham. I know all about your circumstances and your unhappy life. But, Cinderella, I want you for my own, and I know a clergyman over in Jersey who doesn't go to bed till twelve, and if we take a taxicab we can just make it. Will you come with me, Cinderella, dear?"

"Yes," sighed Cinderella happily, and that was the second time he kissed her.

Wasps prey on other insects which they use as food for their larvae.

This is the season to engage in the propagating of a general stock of tender plants which are to be increased during the winter for next spring's use. Petunias, carnations and pinks strike best about October 1. Pot the cuttings as soon as they are rooted.

About the House

DOMESTIC SCIENCE AT HOME

Twelfth Lesson.—Cereals.

Wheat, corn, rye, oats, rice, buckwheat and barley are the grains from which cereals are prepared. All cereal foods contain protein, carbohydrates, fats, mineral salts and water in more or less proportion.

Protein is necessary for building all bodily tissues, therefore it is a necessary food constituent. It is also the most expensive in the food groups.

Carbohydrates are the starches and sugars. Cellulose, which also belongs to this group, is valuable to the body for its bulk and digestive properties, but it has no food value.

Fats are found in various proportions in different grains.

Mineral salts are found in abundant supplies in cereals.

The climate, soil and the quality of the grain itself are the determining factors of the actual amount of nutriment that is contained in the various grains that are used for cereals. The methods used by manufacturers in preparation of the various grains for the market are also one of the determining features.

Cereals may be coarsely ground and contain a large amount of the outer coat of the grain, or they may be finely milled, with the outer covering removed. Corn, wheat and oats contain large proportions of fats; rice contains very little. Oats is the richest cereal in protein and fats; wheat ranks second to oats and corn comes next.

Cooking.

Long, slow, continuous cooking is necessary to thoroughly soften and render the cellulose easy to digest. The starch, which is present in the grain, is enclosed in a cell-like structure, therefore long cooking is necessary to soften this cellulose, so that the digestive juices may act upon the cooked starch. Following is a table of proportions to be used in preparing breakfast cereals:

Cereal	Water	Salt	Time
	cupful	cupful	teaspn.
Cream of wheat	4	1	50 min.
Wheatena	4	1	50 min.
Rolled oats	4	1	60 min.
Rice	4	½	50 min.
Corn meal	4	1	40 min.
Hominy grits	4	1	40 min.
Coarse oatmeal	4	1	40 min.
Cream of barley	4	1	40 min.

Use a double boiler for cooking all cereals. This will also prevent them from scorching. A fireless cooker is ideal for the proper cooking of all grains and cereals. Dates, nuts, raisins, figs, prunes and dried fruits may be added to the cereal, when cooking, for the sake of variety.

Improperly cooked cereals will cause intestinal disturbances. The cereals should be made into gruels for small children and invalids, then strained through a fine seive. This method will remove the coarse cellulose. Cinnamon and nutmeg may be used to flavor gruel.

Cereal Griddle Cakes.

A cup of cold cooked cereal may be added to the prepared batts, for baking on the griddle. Try adding one cup of cold cooked breakfast cereal to your muffin mixture. This makes a very good hot bread for breakfast.

Mold the cold cooked cereal in glasses, then cut in thick slices and dip in flour; now brown in hot fat and serve for breakfast.

Left over portions of meat may be minced fine and added to the cereal before molding.

Oatmeal Goodies.

One and one-fourth teaspoonfuls of baking soda, one tablespoonful of water, one cupful of cooked oatmeal, one-half cupful of sour cream, one-half cupful of molasses, two tablespoonfuls of cocoa, one teaspoonful of cinnamon, one-half teaspoonful of nutmeg, one-half teaspoonful of cloves, one cupful of flour, one cupful of dried bread crumbs. Mix in the order given, then mold into balls the size of a walnut. Flatten them between the palms of the hand, and then place on pans prepared as described for crumb crackers. Bake in hot oven for ten minutes.

Note. Use level measurements. A nut or raisin may be placed on top of these goodies. Two tablespoonfuls of shortening and sour milk may be used in place of cream.

Crumb Crackers.

One-half cupful of bread crumbs, one-half cupful of white flour, one-fourth cupful of graham flour, one-fourth cupful of sugar, one-fourth teaspoonful of salt, one-fourth teaspoonful of nutmeg, one-fourth teaspoonful of ginger, six tablespoonfuls of lard. Mix the dry ingredients, rub in the shortening and dissolve one-half teaspoonful baking soda in one-half cup of sour milk and add; three tablespoonfuls of molasses, one well-beaten egg, four tablespoonfuls of finely chopped citron. Mix to dough, then roll one-fourth inch thick. Cut and then brush with beaten egg and sprinkle the top with granulated sugar. Bake in hot oven from eight to ten minutes.

Note. Always take the cookies on up-turned baking pan; grease well and then rinse well with cold water before placing the cookies on it to bake.

Preserving Garden Products.

Lebanon Chow-Chow.—One quart of corn, cut from the cob, one pint of lima beans, one quart of string beans, four red peppers, cut in one-inch blocks, four green peppers, cut in one-inch blocks, ten cucumbers, cut in one-inch blocks, two head, of cauliflower, broken into small flowers. Place all in a preserving kettle. Cover with cold water and cook gently until the vegetables are tender. Drain and cover with a weak vinegar, adding; one pound of brown sugar, two ounces of mustard seed, two ounces of mustard, two tablespoonfuls of whole cloves, two tablespoonfuls of whole allspice. Bring to a boil and cook for twenty minutes. Seal in all-glass jars. This may be made a mustard color by adding three level tablespoonfuls of turmeric.

Dill Pickles.—Use a lard or butter tub. Cleanse thoroughly and then scald with boiling water and place in the sun to dry. Select medium-sized cucumbers. Wash, to remove the sand, and now place a layer of grape vine leaves in the bottom of the tub. Over this spread a layer of dill. Place a layer of cucumbers and then cover the cucumbers with a good layer of dill. Repeat this operation until the tub is filled to within four inches of the top. Have the top layer of dill one inch thick. Over this place a thick layer of grape vine leaves. Make a brine of water and salt that will float an egg, bring to boiling point and add one ounce of mustard seed, three ounces of horseradish root, cut in small pieces, two ounce of ginger, cut in pieces, one-half ounce of black pepper. Pour over the cucumbers and then cover with a piece of cheesecloth, then with a cover of wood cut so that it will fit inside the top of the tub. Place a heavy stone on this to weigh down the cucumbers. Stand in cool dry place to ferment. Look at the pickles once a week, removing all froth and mold. Wash the cloth and return it to cover the tub. Also keep the tub filled with brine.

Salting Corn For Winter Use.

Use a lard or butter tub. Cleanse thoroughly and scald with boiling water. Rinse in cold water and place in the sun to dry. Now place six inches of salt in the bottom. Select good sound ears of corn and place them in the salt, taking care that they do not touch. Cover with salt. Repeat this operation until the tub is full. Place a cover on top of, or, failing this, cover with two layers of cotton batting and then with a newspaper and finally with cloth. Do not remove the husk or the silk from the corn. This can be used late in winter and will keep. The secret is to have each ear of corn entirely surrounded by salt, taking care that the ears do not touch each other.

"How many revolutions does the earth make in a day?" It's your turn, Willie Smith." "You can't tell, teacher, till you see the morning paper."

250 Seems a very large number of cups to get from a pound of tea. But that proves the fine quality of Red Rose Tea, which goes further and tastes better because it consists chiefly of rich, strong teas grown in the famous district of Assam in Northern India.

A pound of Red Rose gives 250 cups.

Kept Good by the Sealed Package

CAPT. GUYNEMER'S SPLENDID RECORD

FAMOUS FRENCH AVIATOR REPORTED KILLED.

Credited With Having Shot Down Fifty-three German Airplanes and More Than Eighty Pilots.

Capt. George Guynemer, the famous French aviator, who is supposed to have lost his life in a contest with the enemy on September 17th, is credited in aviation records with having shot down fifty-three German airplanes inside th. German lines and with having destroyed at least twenty-five more that were uncounted. He was one of the youngest men of his rank in the French army, having been promoted by President Poincare in Febrdary last at the age of twenty-two. At the beginning of the war Guynemer was under age. He tried five times unsuccessfully to get into the army and finally had to literally break his way into the Aviation Corps. The infantry refused him because he was under weight for his height and the Flying Corps rejected him because the examining surgeon considered that he was too nervous. Finally, through the influence of a friend of his family who was in charge of an aviation school he was allowed to learn to fly. He astonished his instructors by his rapid progress and coolness and won a flying license, after which the Aviation Corps accepted him.

An "Ace" Last Year.

Guynemer became an "ace" in the French Aviation Corps in August, 1916, and soon thereafter surpassed the record of Sub-Lieutenant Jean Navarre, who up to that time led with twelve German machines to his credit. In the meantime Guynemer had received two bullets in the arm at Verdun. In 1916 the Academy of Sports awarded the young aviator a 10,000 franc prize for "the best sporting event of the year." At the end of the same year, with his Captain stripes, he received the Cross of the Legion of Honor.

Captain Guynemer's greatest day's work was on May 17 of this year when he brought down four German machines, two of which he accounted for in the space of two minutes, having attacked a group of four. With only three cartridges left while on his homeward flight, he encountered the fourth German and shot him down with one of the three remaining cartridges. One of the two victims he shot down on August 4 last was Lieut. Hohendorf, a German aviator, who flew for a French airplane company before the war and who had shot down twelve French machines.

The fifty-three German machines officially credited to Captain Guynemer's record were worth something more than 1,500,000 francs. Some of them were manned by two or three men, and it is estimated that he accounted for more than eighty pilots, observers and gunners.

His Last Fight.

Guynemer's last fight is described by a comrade, who is quoted by The Excelsior, as follows:

"Guynemer sighted five machines of the Albatross type D3. Without hesitation he bore down on them. At that moment enemy patrolling machines, soaring at a great height, appeared suddenly and fell upon Guynemer.

"There were forty enemy machines in the air at this time, including Count von Richthofen and his circus division of machines, painted in diagonal blue and white stripes. Towards Guynemer's right some Belgian machines hove in sight, but it was too late.

"Guynemer must have been hit. His machine dropped gently towards the earth and I lost track of it. All that I can say is that the machine was not on fire."

THE FIRST HEADLIGHT

Nature of This Phosphorescent Light Still Unknown to Science.

The first headlight was carried not by a locomotive, but by a wing-d insect—the lantern fly.

Nobody knows just why the lantern fly carries a lantern. Very likely it is for the purpose of notifying insects of like species and opposite sex of its whereabouts.

But the contrivance is wholly unique of its kind. The front part of the lantern fly's head is extended in such a way as to form a hollow, hulbous structure that (in a dead-and-dried specimen) has a paperlike consistency.

When the insect flies at night the papery bulb is illuminated. By what? Nobody can say, except that it is a phosphorescent light, and the nature of that is a puzzl. to science.

Hardy plants that require it may be taken up, divided and replanted. The earlier this work is done the better.

Send Them To PARKER

Anything in the nature of the cleaning and dyeing of fabrics can be entrusted to Parker's Dye Works with the full assurance of prompt, efficient, and economical service.

Make a parcel of goods you wish renovated, attach written instructions to each piece, and send to us by parcels post, or express. We pay carriage one way. Or, if you prefer, send for the booklet first.

Be sure to address your parcel clearly to receiving dept.

The Paisley Advocate

PAISLEY, OCT. 17th, 1917

UNION GOVERNMENT

A coalition or union "Win-the-War" cabinet has at last been formed at Ottawa, the two great political parties having got together during the past week, after protracted and intermittent negotiations.

This marks the beginning of what may be termed a new political era for Canada and should first produce a more energetic and aggressive war policy.

The permanent establishment of such a national government should in a short time eliminate the scandalous abuses that have existed in connection with the patronage business, and which is inseparable from the party system of government.

It is to be hoped that the union now effected may work out so satisfactorily to the country that a return to party rule will no longer be desired.

Women's Patriotic League

The annual meeting of the Women's Patriotic League was held on Oct 5th. Mrs Ballachey, the president, occupied the chair. Minutes of previous annual meeting were read and confirmed. The secretary-treasurer, Mrs D McArthur, submitted her report, which was adopted. The report states that "during the year, 1917 the work of the League has been carried on much as in the previous year, but one change may be noted, the monthly contributions taking the place of the tea room, which has been a great saving of work. Many of the people of the town and country have given their hearty support, for which thanks are due. During the year 3,393 yds of material has been bought and cut by the buying and cutting committee; 745 pairs of socks have been knitted by members and others with yarn supplied by the League, also 122 parcels sent overseas, with socks in each, to our boys. Many letters received have shown how these were appreciated. But while much has been accomplished there is still much to do.

Statement of Receipts and Expenditures for Year ending Sept. 30th, 1917

RECEIPTS

Balance, 1916	$361 87
Entertainments	147 32
Collections from members and sundry contributions	598 55
Sale of waste paper, etc	98 40

	$1481 25
Balance on hand Sept 30, 1917	387 54
	$1868 79

There is about $150 worth of material on hand.

Contents of boles shipped to Red Cross headquarters from Oct 1916, 745 pairs of socks, 239 knitted for Mrs McPhedran, 114 flannel shirts for Red Cross, 63 flannel shirts field comforts, 57 suits of pyjamas 404 pillow covers, 461 turkish towels, 370 huckaback towels, 60 trench towels, 79 personal property bags, 48 comfort bags, 51 furnished housewives, 10 pillows, 4 trench caps, 2 pairs wristlets, 1 pair knee caps, 1 pair operating socks, 7 wash cloths 300 mouth wipes, several parcels of old linen and old flannel.

Donations from Knox Church Ladies' Patriotic Class: 25 pairs of socks, 31 furnished housewives, 51 personal property bags, 25 Turkish towels, 6 pillows, 6 pillow covers.

Ebenezer Ladies: 3 suits of pyjamas

If F B Putnam and W R Barnett will be asked to audit the books. The following officers were elected: President, Mrs S Ballachey; Vice-Pres., Mrs G B Irwin; Sec'y-Treas, Mrs D McArthur; members of Executive Committee—Mesdames Craig, Sinclair, Fletcher, Muir, Collins, McMahon; cutting and buying com.—Miss Maxwell, Miss Watson, Mrs Hepper; packing com.—Mrs Coulter, Miss Dewar, Mesdames Cruickshank, Cavill, Barnett, McLaughlin, Ellis, Smart, Bryce (J), Davison, George, Gregg, Tooke, Grant (R B) Trelford, Pearce (R).

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

WALKERTON

As will be seen by his annual report on another page, Jailer McKechnie has been feeding prisoners at the County Jail at an average cost of 12½c per day, which shows that there is one place in Bruce which is not seriously affected by the high cost of living.

Pte Jack Anderson, who enlisted from the Rattan Factory here and crossed overseas with the famous 18th Battalion, returned to his home in Cargill on Monday on a month's furlough, after three years' absence, during which time he has seen some strenuous fighting at the front. Before returning for Canada he spent many months in an English hospital recuperating from injuries received when a shell exploded near his dugout and threw several sand-bags on top of him. A reception in his honor is being held at Cargill on Tuesday evening next.—Herald and Times.

Letters from the Soldiers

WITH THE FORESTRY CORPS IN FRANCE

Capt. Wm Walks, veterinary with the Canadian Forestry Corps, writes an interesting letter to his home on and Elderslie. He says: "I have had no Canadian mail since coming over here, but I suppose it will be along soon. . . . Here it is a case of being as in the song "All dressed up and no place to go, unless you go back to bed." But I suppose I am a great deal better off than a great many over here. I cannot expect sunshine all the time I am in the war and so far my experiences in the army have been a cinch. It will be six months on Sunday (16th Sept) since I enlisted, and taking it altogether I have had no hardships to speak of so far. The worst thing over here is the language, as I know very little French and you cannot get by without it. I was just looking it up the other day, and found that I was a lien tenant for just nine days. I certainly got promotion very quickly. The French officers that I have met around here are certainly fine chaps. I was up to the trenches last Saturday night and met an artillery officer up there who used to work in Eaton's, Toronto. He could talk excellent English and it was a great treat to meet a chap like that. The shelling was fairly active while I was up so I was not sorry to get back again. I was over at the other company's headquarters yesterday all day. They are just about 3 miles from the German line in a big wood. They have to keep all their buildings, etc, covered with brush to prevent the Boches from seeing them. While over there I visited a French battery of heavy guns. You certainly would enjoy the work out here. It is just the same as our bush work at home. We have gangs cutting in the bush, skidding, hauling and running the sawmill. The mill runs two shifts and is going day and night. The mill here is an old fashioned affair, but the one up at the other company is a peach, and cuts about 30,000 per day. Each company has about 170 men and 75 horses. We use a light railway to draw the logs from the bush to the mill. Two little cars on it drawn by one team can haul from 20 to 30 logs at a load if they are not too big. The timber here is beech, birch, elm poplar and a few pine. There are not many very tall trees the most of them being around 90 feet. I was through a large forest around Campagne the day I arrived in here. I saw the finest oak so it that I ever saw in my life. Great tall trees with 5,000 or 6,000 feet in them I would just like to be allowed to cut them.

I was up at —— this afternoon and saw the famous River Somme. It is quite a small stream there. Like all the other towns in this country it is pretty much a wreck. It seems too bad to see large laundries and other factories deliberately blown to stone. In a large town about 20 miles from here, in the largest glass factory in the world. It is a total wreck, and was just deliberately blown to pieces before the Huns retreated. There is an engine in it of 25,000 horse power, and the Huns put a bomb to each cylinder and blew them to pieces.

I am in the best of health and am getting fatter every day. I now weigh 210 lbs and am still gaining. I got a bunch of drugs in this week which will give me a chance to do something, as I was not in here without anything to work with.

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

504 Champlain St., Montreal.

"For two years, I was a miserable sufferer from *Rheumatism and Stomach Trouble*. I had frequent *Dizzy Spells*, and when I took food, felt wretched and sleepy. I suffered from Rheumatism dreadfully, with pains in my back and joints, and my hands swollen.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that 'Fruit-a-tives' is the only medicine that helped me". LOUIS LABRIE.

Model Eighty-Five

A Matter of Choice

If you are a lover of six-cylinder performance, or if your choice is a car equipped with a tried and true four-cylinder engine, you will do well to look into the merits of the Overland Model Eighty-Five.

This is the popular model that is built in both motor designs—either a Four or a Six.

Both are big, comfortable cars. The Four has a wheelbase of 112 inches—the Six 116 inches.

Both are beauties in appearance and in action. Cantilever rear springs and big, roomy seats afford solid riding comfort for five people.

If you have decided to invest in a moderately priced, real family car—one that will stand up under steady service—drop in and ask for a demonstration of this Model Eighty-Five.

Overland and Willys-Knight Closed Cars

Misery in Back, Headache and Pain in Limbs.

Dear Mr. Editor—For more than a year I suffered with misery in the back, dull headache, pain in the limbs, was somewhat constipated and slept poorly at night, until I was absolutely ready to collapse. Seeing an account of the wonderful qualities of "Anuric," prepared by Doctor Pierce, of Buffalo, N. Y., I sent for a box, and before using the whole box I felt and still feel improved. My sleep is refreshing, misery reduced, and life is not the drag it was before. I most cheerfully recommend this remedy to sufferers from like ailments.

Yours truly, W. A. Ronzere.

NOTE: You've all undoubtedly heard of the famous Dr. Pierce and his well-known medicines. Well, this prescription is one that has been successfully used for many years by the physicians and specialists of Dr. Pierce's Invalids' Hotel and Surgical Institute, of Buffalo, N. Y., for kidney complaints, and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine, and urinary troubles.

Up to this time, "Anuric" has not been on sale to the public, but by the persuasion of many patients of the increased demand for this wonderful healing Tablet, Dr. Pierce has finally decided to put it into the drug stores of this country within immediate reach of all sufferers.

I know of one or two leading druggists in town who have managed to procure a supply of "Anuric" for their anxious customers in and around this locality. If not obtainable send one dime by mail to Dr. Pierce for trial package or 50 cents for full treatment.

EDITOR—Please insert this letter in some conspicuous place in your paper.

RENEW your subscription to THE ADVOCATE and your daily papers now.

An advertisement by The Bell Telephone Co. of Canada to improve PARTY-LINE SERVICE

Co-operation:

Each subscriber should co-operate to better the service on his line. The practices suggested below have been found to greatly improve party-line service:

1. Before calling, find out whether the line is in use. If it is, hang up your receiver promptly.
2. Emergencies will arise. If a party-line subscriber desires to make an emergency call, the persons using it should give up the line temporarily.
3. Do not allow children or others to listen or interrupt your neighbor's conversation when the line is in use.
4. Make your calls as brief as possible. Short talks will keep the line open and make the service of most value to everyone.
5. Answer promptly *when you hear your ring.*

The Bell Telephone Co. of Canada

"Good service * * * our true intent."

ARRAN COUNCIL

Council met Oct 6th, 1917; all present. Communication from Department of Highways regarding the appointment of a Road Commissioner. No action. From the Red Cross re contribution. On motion of George and Brunton the Treasurer was instructed to forward the amount levied $1,000, when collected. The Treasurer's report shows a balance of $1135.41 on hand and in bank, that the Reeve and himself had borrowed $1000 from the Merchants Bank and handed it over to J Cole, contractor, on account Kennedy's bridge. The Clerk was instructed to notify Michael Lowes to carry out his share of the Ash ditch, as provided by award of Engineer. The Reeve and the Treasurer were instructed to settle with Mr Cole when bridge is declared satisfactorily completed. Councillor Scarrow was appointed to see after the timber of Kennedy's bridge and sell it to the best advantage and see after selling on east side. The Reeve was instructed to procure a ten dollar gold piece and send it to Thomas Donald, a returned wounded soldier, with a suitable address. The following orders were issued—Wilson Nelson 52 yds gravel, $5.20; Treas of Tara refund of payment made for work done on the Invermay road by steam roller, $28.80; Wm Bass, gravelling on Con 10, lots 17, 18, $23; Alex Wain, for pick plow for road work, $33; Alex Wain, for use of hall for holding voter's list court, $4; C S Cameron, legal services re Best appeal $9.14; Robt Legge, repairing culvert, lot 26, con 2 $9; D McArthur, putting in twin tile culvert, 16 inches in diameter each, lot 1 con 6 $18; D McArthur, drawing tile and repairing culvert Lo 6, con 6 $1.50; D McDermid, building no 2 culvert lot 10 con B, $6.50; Rich Grant, putting in large culvert and drawing tile and gravel township Arran and Elderslie, Eld ½; Robt Quigley, cleaning out culvert lot 2, township Arran and Eld, $1 Eld, ½; Earl Grant, putting in culvert and drawing tile, lot 1, township Arran and Eld., Eld to refund ½ $4; Thos Cann, service with grader, $5. Brunton and George reported that they had let the job of Arran's share of the Ash ditch. Council adjourned until the 10th November next.

H T POTTS, Clerk.

Tax Sale of Lands

NOTICE is hereby given as directed by the Assessment Act, R.S.O. 1914, Sec. 118, s.s. 1, that a sale of lands for arrears of taxes will be held at the hour of 11 o'clock a.m. at the Council Chamber in the County Building, in the town of Walkerton, on Friday, the 2nd day of November, A.D. 1917, when there will be offered for sale by public auction, unless the taxes and charges are sooner paid, the following described lands in the Township of Greenock, viz: Part of lot 23, Kilsyth, Pinkerton, being that part of said lot conveyed in Instrument registered in the registry office of the County of Huron as 1318 thereto.

A complete list of lands to be sold for taxes is published in the issue of the "Ontario Gazette" of July 28th to August 18th inclusive, and in the "Hepworth Dragon" July 26th to October 11th inclusive, 1917, a copy of which may be obtained on application from the undersigned.

If it be required to hold an adjourned sale it will be held on Friday, November 16th next, at the above mentioned place and hour.

NORMAN ROBERTSON,
Treasurer Co Bruce

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Office help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places and they need training.

NORTHERN Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circulars free on application.

C. A. FLEMING, F.C.A., Pres.

MEN AND WOMEN TO EARN MORE MONEY

The most powerful single influence is greater production, and consequently in greater earning power, is the energy of the worker.

To work his or her best, the worker must be in possession of perfect health. So many who start the day's work with full vigor, tire as the day's work goes on and are forced to make frequent stops to relieve an aching back.

This backache is not due to the work, but to defective kidney action, and will disappear if treatment with Gin Pills is resorted to.

We have a number of testimonials on file from men who have had to give up work on account of backache, rheumatism, and the various ills that follow poor Kidney action. Gin Pills enabled these people to resume steady work again, with the vigor of youth and all the happiness of unfettered activity.

We will gladly send a free trial of Gin Pills to all who feel the need of this tested remedy, or we urge you to buy from your dealer on the strict understanding that your money will be returned by us if Gin Pills fail to benefit your particular case, according your word on this matter. Gin Pills are 50c. a box or 6 boxes for $2.50. Write for sample to National Drug & Chemical Co. of Canada, Limited, Toronto, or to the U.S. address, Na-Dru-Co Inc., 202 Main St., Buffalo N.Y. 128

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

The AUTOMOBILE

Operation of the Brake.

"Our brake is your best friend in an emergency," says an expert, "but like every other good friend it must be treated right. If working properly, it gives you the greatest sense of security, but if neglected you may pay the penalty with your life.

"There are only two kinds of brakes —internal and external. The internal consists of a heavy ring which expands, gripping the brake drum or stopping its motion. The contact is usually metal to metal, although a brake lining is sometimes used. The internal brake is called the internal expanding or expanding-ring brake.

"The external brake consists of a steel band lined with brake lining, a specially woven fabric of asbestos and brass wire. This is drawn tightly around the brake drum, holding it from the outside. It is called the external contracting or contracting-band brake.

Apply to Controls.

"The names 'service brake' and 'emergency brake' do not apply to the brakes themselves, but to the controls. The pedal usually applies the contracting band brake and is called the service brake; as it is the one ordinarily used in service.

"It is not so powerful as the emergency brake and is better adapted to service, bringing the car gently to rest without throwing the passengers forward or locking the wheels so that the car will slide on one spot on the tire, wearing it away. As implied by the name, the emergency brake is only used in an emergency to stop the car suddenly. It is extremely powerful and may be applied too suddenly, causing the car to skid.

"Another classification of brakes is by location, that is, transmission brakes and wheel brakes. A transmission brake is one that sets around a drum on some part of the transmission, such as the brake on the planetary of the Ford car. It holds the shaft rigidly, but allows the wheels to turn different ways, thus increasing the danger of skidding.

"A serious disadvantage on heavy cars is that the full driving force of a heavy car is applied to the differential, universal joint, drive shaft, and other points, straining them severely. This is not a serious objection on a light car.

Put Brake on Drums.

"The only proper place for a brake to be applied is on drums on the rear wheels. The emergency brake is always applied here. On account of the fact that it can be set, the emergency brake is used to hold the car when we leave it.

"Brakes should never be applied except when needed. This sounds like a truism, but has more to it than one may think. The operator should allow the car to coast to the place where he wishes to stop, letting it come to rest without applying the brake at all. This saves the brakes, the tires and the mechanism.

"Quite different is the grand stand play of the novice. He dashes wildly up to the place where he wants to stop and jams on both brakes with a flourish while his experienced friend turns away with a pitying smile. Brakes were made for use not abuse.

"If is extremely important to try out the brakes every time the car is taken out. Speed up when you have a clear space ahead of you and then apply the brakes. Do this several times with both foot and emergency brakes. Note whether car stops promptly or not, or if it has a tendency to swing to one side, showing one wheel to be free and the other one dragging.

Test Brakes Often.

"Once a week a thorough test and inspection should be given. Jack up both rear wheels, set the emergency brake up until it binds and try both wheels. The resistance should be uniform. If one side is loose it must be tightened. If the car is equipped with brake adjusters the two sides will hold evenly unless there is grease on the brakes or they are worn unevenly.

"The two sides should be measured and brought to even length. An assistant will be necessary to apply the foot brake while it is being tested, although a jack might be used to hold the pedal in case no assistant is available.

"Brakes may slip because of grease getting on them from the axle housing, wear of the lining so that the rivets are touching drums, stretching of the brake rods, looseness of the parts. These should be gone over and remedied as far as practicable.

"Be extremely careful not to draw up the brakes too tightly. They will bind and prevent the engine from driving the car at proper speed, thus wasting gasoline. At the same time the lining is worn, requiring replacement all the sooner. After adjusting the external brake you should see daylight all around the drum, showing that it is not touching anywhere.

"So give close attention to your brakes, as their failure at a critical time might easily mean death."

SOLDIER'S FIRST AID.

Knowledge of How to Use His First Aid Packet is Invaluable.

An elementary knowledge of first aid is absolutely priceless, says Captain David Fallon, M.C. In my experience it has been the means of saving numerous lives, including my own on many occasions. When a man is dangerously wounded and first aid is applied immediately there is every chance of his life being saved, but if the blood is allowed to escape from the body, and there is no means of stopping it, the body is soon emptied of its priceless fluid, and death follows inevitably. I have known men who have been dangerously wounded and have saved their lives by a slight application of this knowledge of first aid. Each soldier is supplied with a first aid packet and should become familiar with its contents and application. This is one of the priceless gifts to every man.

One should be aware of how easily one's own clothing and accoutrements can be used in the application of first aid. Men lying wounded in No Man's Land, where no assistance can be rendered them, can save their lives by using their puttees as a means of bandage and a bayonet as a tourniquet. In one of my midnight raids I came across a man who had been lying in No Man's Land with a bullet wound through both his thighs, and his life had been saved through his own presence of mind in having applied his field dressing onto the wounds and tied both his legs together with his puttees. On another occasion, when capturing a Boche trench, I discovered a man who had been lying in a funk hole with both legs smashed, but having applied first aid he had saved his life, though his legs were afterward amputated.

A Book About Bees.

When bees become queenless they have the science to rear a new queen to save the colony from perishing. An ordinary worker-egg that is just hatching into the larva is profusely fed with royal jelly, a strangely prepared food of which no one knows the exact composition. Instead of growing in the ordinary cell, the larva is given one of these great waxen cones for its nursery; and instead of hatching in twenty-one days into a worker bee it hatches in sixteen into a fully fledged virgin queen. The first preparation for swarming is the starting of a batch of these queen-cells, so that the colony shall not be left queenless when the queen departs with the swarm, and the swarm does not leave till some of the cells are sealed over. Whenever a queen loses her life, or grows so old as to be useless, the same sort of queen-cells are started to replace her. The only exception is when a queen dies in the winter, and there are no eggs from which a new one can be reared; and then, unless man gives help, the colony quickly vanishes. Frank Lillie Pollock tells all about this in "Wilderness Honey," which is just published.

Let the rats and mice do the starving.

ARMY DOCTORS WIN BATTLES

Many of the Diseases Heretofore Most Deadly are Defeated.

Few realize how great a debt of gratitude not only the army but the nation owes to the administration heads of the Royal Army Medical Corps. They have seen clearly and have not stayed their hands. It is common knowledge that typhoid fever has been defeated, tetanus is defeated, bilharzia, that plague of Egypt and the old Pharaohs, is defeated, dysenteries are on the way to defeat, the terrible sepsis of wounds has been defeated, only a few enemies remain and the war against them is incessant.

Regarding one of these few, the London Lancet has made the important announcement that an officer of the Army Medical Corps has found a parasite in the blood of men infected by trench fever and working from that has been able to suggest a new line of treatment.

The Lancet emphasizes the importance of the obscure war diseases, of which trench fever is an example. These diseases are widespread and no man can say how long drawn out their after effects may be, but it is now known that such after effects do occur.

One of these after effects of trench fever is a common disease from which humanity is always suffering. With the discovery of the germ of trench fever the antidote also was found. It is possible that this discovery may lead to wonderful results; it is being watched with eager interest by medical men.

The King of Spain's Waistcoats.

Affairs in Spain have brought King Alfonso lately into considerable prominence. He is better liked in England than any other European monarch, and is reputedly the best-dressed king in Europe. But once he received a gentle hint on the art of attiring himself from the late King Edward that he never forgot.

The young king brought with him to Buckingham Palace a varied selection of fancy waistcoats of the loudest design. He wore one of these garments when he went to have a cup of tea in King Edward's smoking-room shortly after he arrived at the Palace. The late King, in the most tactful manner, pointed out to the young monarch that in England waistcoats of so remarkable a pattern were not worn. King Alfonso thanked King Edward for this hint, and subsequently gave away his whole stock of fancy waistcoats to his valet. "The waistcoat the King gave," he confessed subsequently, "was the quietest one of the lot."

Lucid Testimony.

"And after the choking—" prompted the lawyer, who represented the plaintiff in a recent trial for assault.

"Oh, there wasn't any choking that I saw," said the witness.

"No choking? But didn't you tell the officer that the accused sprang upon his victim from behind and seized him by the throat?"

"Yes, sir, surely. But there wasn't any choking. He just squeezed him till he couldn't breathe."

"Well, wasn't that choking, I'd like to know?"

At the court was not enlightened by such a finely discriminated point, neither was the truth beclouded. But Mr. William J. Burns, the famous detective, declares that it is nearly impossible for the average person to give simple, lucid information to a lawyer or detective. He gives as an example the office boy who was asked, "Did Mr. Jones or his partner usually reach the office first?"

"Well," said the boy eagerly, blushing and stammering with excitement, "Mr. Jones at first was always last, but later he began to get earlier, till at last he was first, although before he had always been behind. He soon got later again, although of late he has been sooner, and at last he got behind as before." But I guess he'll be getting earlier sooner or later."

Teacher—Who can tell what were the words of the Angels' Song on Christmas morning? Patriotic Pupil —"The Maple Leaf Forever!"

Of all the treasures in Alaska, the seals are probably among the most valuable. Unlike mineral wealth, they need never run out, for, in consequence of their powers of reproduction, they can yield under reasonable control a large and continuous revenue for an indefinite future.

COURAGE OF FRENCH SOLDIERS

THE SOIL OF FRANCE IS NEVER A SOLITUDE, HE SAYS.

Looks Forward to the Release of His Beloved Land From the Grip of the Barbarian.

The following letter from the trenches was written by a French soldier who had been on active service since the war began. In civil life the writer is a simple stone mason:

"I wrote to you only a few days ago, but as I have a free moment I am sending you news again, as it may be some time before I shall have another chance.

"The more we gain upon the enemy and close upon him, the more he attacks us and lays hold upon us, sucking in our battalions like a thousand tentacles of an octopus. Ah! when bit by bit, at the price of fatigue and sacrifices that cannot be told, the soil shall have been retaken by us, wrested by main force by the soles and the nails of the boots of the diggers, all the united forces of the offensive, when the waves of the assault shall be only a meter from the frontier at the border of Belgium, she, too, will be impatient to feel the torrent of her sons sweep over her. Then only shall we celebrate the feast of the soil, which shall be both her salvation and her purification.

Most Beautiful of Edens.

"However, we must be wise. Let us await whatever fate has in store for us in the decision of our commander, who lays plans, while appearing to be subject to a retreating enemy. We must even distrust ourselves and the snares of our enthusiasm and imagination, and without stifling our joy yet us advance only with dignity upon this suffering soil, which the barbarian, in being forced to evacuate, exhausts his rage upon in martyring. These mutilations of the last hour make it only dearer to us than ever. It is as though it were beaten like an ass at double time by the scourges of the adverse army, or were like an anvil for the perpetually bursting shells, which leave nothing but the surface, the crust, the outer shell of the earth, the kernel of all the germinations shrunken and pale, ravaged, scraped of, tormented, blundered. Even so, it appears to us he most beautiful of Edens.

"All the trenches and their branches cutting into the earth represent to us wide open furrows, ready for future harvests, both material and moral. The earth in the trenches, we are all the veins of countless treasures; it is the tufu, the base, the foundation, the solidity, above all the supreme reality. When one has, the soil one has all.

Enemy Has Taken Nothing.

"The German in his haste cries out that he has left a desert. He is mistaken. The soil of France is never a solitude, this least of all! It is peopled by a glorious throng, which our enemy is too gross to see or perceive. It is inhabited by memories, by the shades of the dead, and by the living troops of veterans of the earth, by all who have remained faithful to it, who, in order to go before us, rise up, stumbling from the midst of ruins and debris, they themselves but ruins and debris, fragments of social classes, and remnants of families. In this fecund desert all is ready for a new birth; the children and the grain alike will spring up in strength. At each step the furrows open, yawning and covetous of the deep, distant roots of the race which could not be destroyed. They are forever dried in their profound sleep in the dust of the devastated church—in the evenings they rise like the bronze notes of dream bells.

"No. The enemy has destroyed all, but he has taken nothing away. The real desert is there, in the mournful waste of his own heart, from which hope is fled."

"He that turneth from the road to rescue another, turneth toward his goal; he shall arrive in time by the footpath of mercy—God will be his guide."—The Tribe of the Helpers.

St. Helena was discovered by the Portuguese in 1501, and remained unknown to other nations for a period of eighty-seven years. It was first inhabited by the Dutch in 1645.

In Orchard, Field and Garden.

When picking grapes, handle them by the stem and avoid injuring the bloom on the berries. The bloom adds to their looks and selling qualities.

Last call to cut out the old raspberry and blackberry canes. The cuttings should be burned promptly, in order to destroy insect and fungous pests which may be on them.

Currants and gooseberries may be pruned as soon as the leaves fall, or the work may be left until early spring. Cut back one-third of this year's growth, and thin out surplus, diseased or unthrifty shoots. Old bushes may have two-thirds of the present year's growth removed.

The various kinds of small fruits will not cost much to plant and will give an abundance of fruit the season through. Plan for it now; plant next spring.

Of course there is nothing ahead of a mellow apple from the cellar or pit when the snow is banked deep and the fire shines bright, but there are canned apples, dried apples, apple butter, apple sauce, apple preserves and spiced apples for the table, that will last until blossoms come and go, which add graciously to our larder supply; and when the crop is picked is the time to be busy saving this store of good things.

It is not safe to store damp grain or hay unless you have adequate facilities for frequent "turning." Few farmers realize how small a percentage of moisture will cause otherwise good grain or hay to heat and deteriorate.

While it is often preferable to apply lime to a field when preparing the seed bed, it is better, when badly needed, to spread it during the fall or any time during the winter rather than to neglect it altogether. Ground limestone will not injure rather the winter wheat field than the meadows.

A good [illegible]ng-pin saves the thumb nails wonderfully. Make your own pin. Take a piece of hickory about three and a half inches long, cut a fairly deep groove around the middle, sharpen one end, slit a piece of leather from an old binding, put it around the middle finger of the right hand to get the length, make a hole at either end, run the sharp end of the pin through these, making a loop for the finger, put it on and go ahead.

All tomatoes showing color should be picked before frost. Stored in a shed or outbuilding, they will soon ripen. Well-grown green ones can be packed, wrapped in paper and stored in a cool place. When wanted for use they can be ripened by placing them in a warm room. It is true that some of them will be soft, but what of that? They will taste good when frost has laid low all tender things out-of-doors.

There are always some burst heads of cabbage. Every one should be worked up into kraut, or sold for that purpose. Along toward the middle of the month there should be a good demand for kraut cabbage, and it is a good plan to start in early and get a line on the business. Only the hard fully-developed heads of cabbage should be cut for sale this month. This will give the soft, immature heads time to gain in weight.

There seems to be a wide-spread impression that celery blanched with earth is crisper and better flavored than that blanched with boards. This may be due to the fact that boards are more generally used for the early crop when the weather is warm, and the quality is then never so good as when it is matured in cool weather. In studying the matter of blanching it is well to remember that a great deal of celery grown in different parts of the country is blanched with boards and sold for fancy prices. The important thing is that the blanching be well done at the least expense.

Promoting the Cat.

As rats did much damage to his papers, a Hindu clerk, who was in charge of the official documents in one of the more remote Indian towns, obtained permission to keep two cats, the larger of which was to receive somewhat better rations than the other. A few weeks later, the head office at Delhi received this dispatch:

"I have the honor to inform you that the senior cat is absent without leave. What shall I do?"

To this problem the office vouchsafed no answer. After waiting a few days the Hindu sent off a proposal:

"In re absentee cat. I propose to promote the junior cat, and in the meantime to take into government service a probationer cat on full rations."

Food Control Corner

Pointed Paragraph For People Who Want to Win the War.

To-day's motto: 'Don't stuff your husband, but husband your stuff."

Starve the garbage can and nourish the nation.

Food-control, to be a country-wide success, must be a personal matter with every man, woman and child.

Woman's contributions to the cause are numerous. Not one is so important as her assistance in food control.

One fish meal for everybody every day in the week would establish the market and lower the cost of sea and lake fish.

You can prevent waste by keeping track of what you spend.

The housekeeper holds the key to victory. Ounces of food saved in the kitchen swell into thousands of tons when the nation's cooks act in concert.

Eat more fish.

The wanton is as much a slacker as any one can be.

The signed "Food Saving Pledge" is an obligation that no one but yourself can force you to live up to. You are on your honor.

Many millions of Europeans would eagerly accept the substitutes for wheat, baron and beef that are so plentiful in Canada.

Food-saving and substitution must be persistent and consistent to bring results.

END OF A FAMOUS LINE

Almost a Century Since the Allan Line Had Its Inception

With the complete merger of the Allan Line in the Canadian Pacific company, one of the oldest of house flags disappears from the seas. It was in 1819 that Alexander Allan sent out his first little brig, the Jean, from Greenock to Quebec. Soon after he had five ships in commission, and from that day to this the Allans have played a large part in the development of trade between Great Britain and Canada. Later on they established services to Philadelphia and to Boston but the line remained essentially Canadian.

Although it was not a direct competitor with such great lines as the Cunard and the White Star—for the former remained out of the Canadian trade for many years and has only recently returned to it—the Allan Line was nevertheless a pioneer in a number of improvements in steamship construction which travelers have long taken as matters of course. Thus the first steel steamship to cross the Atlantic was the Buenos Ayrean, built in 1879, two years before the Cunarder Servia. The Parisian, built in 1881 was the first to have bilge keels.

The Allan line left to others, to be sure, the amazing increases in size and speed which have marked the last quarter of a century. It did not join in the race for records which began with the Etruria and Umbria, and which led to the building of the Teutonic and Majestic, the City of New York and the City of Paris (now the New York and Philadelphia), the Deutschland, and finally such monsters as the Lusitania and Mauretania, the Olympic and Vaterland.

But in 1881 the Parisian was the most famous ship of the whole Atlantic fleet for beauty. A fine steamer vessel, still afloat in the service of the British Government. And the later and larger ships—the Virginian was the first steamship in the Atlantic service with turbine engines—were always well equipped and comfortable. These will probably cross the ocean for many years to come under the Canadian Pacific flag. But many will regret that a name with such a record of honorable achievement as Allan is to be only a memory.

A Forbidden Song.

"There is one subject no man mentioned at the front unless it be very casually," says Captain Ralph W. Bell in "Canada in War Paint." "Even then it brings with it a sudden silence. There is so much, so very much, in that little word 'Home.' If a man were to get up at a sing-song and sing 'Home, Sweet Home' his life would be imperiled. His audience would rise and annihilate him, because it could not give vent to its feelings in any other way. There are some things that strike directly at the heart, and this is one of them."

Dragon flies feed on a large variety of injurious insects.

The Doings of the Duffs.

Join the Home Defence movement for the conservation of food. Help to prevent waste by demanding the whole wheat grain in breakfast foods and bread stuffs. Substitute whole wheat for meat, eggs and potatoes. The whole wheat grain is the most perfect food given to man. In **Shredded Wheat Biscuit** you have the whole wheat grain made digestible by steam-cooking, shredding and baking. Every particle of the whole wheat grain is used including the outer bran coat which is so useful in keeping the bowels healthy and active. For any meal with milk, and fresh fruits.

Made in Canada.

PATRIOTS ENFORCED.

Women of Russia Exercised Compulsion in Regard to Deserters.

When, during the immense and bewildering confusion of the Russian revolution, many hundred soldiers deserted, not from disloyalty, but merely because they wished to go home and see their families, they did not always meet the reception they expected. The women were no less weary of the war than they; but they had sometimes a clearer idea of the necessity of continuing it, even or in case, than had their men. There were fairly numerous instances when the men returned to duty in shouting squads under the escort of the Amazonian guard of village maids and matrons; occasionally a lone husband would be marched back under the sole but sufficient compulsion of a resolute wife.

The influence of women has always been important in holding the soldiers of a nation to their duty, or discouraging them from it. Usually it has remained influence merely, and has not become compulsion. Sometimes it has been exerted in a manner halfway between the two.

In the days of the American Revolution there was a patriotic matron of New England whose husband did not volunteer when his neighbors did. He gave his "binding" health and feeble constitution as an excuse. He was, indeed, a slight and small man, but tough and wiry, and better able to endure the hardships of war than many bigger men, as his spouse well knew. But she did not remonstrate or shame him in the community by expressing her opinion. Instead, she devoted her attention to his diet. If he wrenched a well man, he ought not to eat like one, she decided; and she reduced his rations to such as befitted an invalid. In vain he protested that he required extra nourishment. the hotter and angrier he got, the more firmly she insisted that he was feverish and choleric, and that a light diet was the thing for him, with nothing solid or heavy or rich. In fact, his diet grew daily lighter and lighter. First, doughnuts disappeared from his breakfasts, then flapjacks and cake from his suppers, finally even meat from his dinner—and at that he gave in and ate boiled.

He proved to be a good soldier, who was never sick, and recovered with unusual rapidity from the two honorable wounds that he received. Owing to his littleness and leanness and to a gradual leaking out of the story of how he came to join the army, he bore through his military career and ever afterwards a nickname, which at the first he accepted without resentment, and to which he answered quite as a matter of course. He was known as Starvelin Jones.

Waste Would Feed Belgium.

The crops now destroyed in this country by insect and rodent pests would feed the people of Belgium, according to T. Gilbert Pearson, secretary of the Audubon Societies, who talked of the increased need for the preservation of songbirds, with the increased production of food, and of the renowned campaign which has been begun for that purpose.

People eat **Grape-Nuts** because they like it and they know it's good for the

THE FROST KING.

The Frost King is surely coming,
His spies are throughout the land;
I can trace their stealthy footprints
As I look on every hand.

I saw where they camped in the lowlands
This morning the ground was white
With the ashes of their campfires
Where they gathered through the night.

And everywhere there lingers
A smoke-like purple haze
That must have come from the embers
They left in the woodland ways.

And every tree and thicket
Bears a signal torch aglow,
Where the vanguard of his army
Have blazed the way to go.

The birds are winging southward
They love not the Frost King's reign;
The wee folks of the forest
Are hoarding their nuts and grain.

In garden, wood and meadow,
Wherever I may peep,
The leaves are falling softly
And whisp'ring "Down to sleep."

'Tis wondrously, wondrously lovely
This glorified Autumn land
But the Frost King is surely coming,
I see it on every hand.

Mildred M. North.

WEAK BOYS AND GIRLS

It is a mistake to think that anaemia is only a girl's complaint. Girls probably show the effect of weak, watery blood more plainly than boys. Delayed development, pale faces, headaches, palpitation, and a feeling of listlessness, call attention to weak blood in the case of girls. But many boys in their teens grow thin and "weedy" and have pimples on the face, showing that they have not enough blood. The anaemic boy is just as likely to become a victim of consumption as the pale, breathless girl with her headaches and worn-out look. Let the boy in this condition catch cold and he will lose his strength and his health becomes precarious.

To prevent serious disaster to those of the rising generation, let both boys and girls be given the new rich blood which Dr. Williams' Pink Pills are famous the world over for making. When giving these pills watch how soon the appetite returns and how the languid girl or the weak boy becomes full of activity and high spirits. Remember that the boy has to develop, too, if he is to make a strong hearty man. Give both the boys and girls a fair chance to develop strongly through the new rich blood Dr. Williams Pink Pills actually make. You will then see active boys and girls, instead of weakly children around you.

Dr. Williams Pink Pills are sold by all medicine dealers or may be obtained by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

TELLS TALE OF TORTURE.

Belgian Girl Says Most Terrible Torture Was Inflicted on Youth.

A young Belgian lady, the daughter of wealthy parents, who for over three years has suffered at the hands of the Germans in Belgium, and who succeeded in escaping into Holland, whence she journeyed to London, has related her experiences to a representative of the Central News.

The girl was arrested as a spy because she had written letters to her sweetheart, who is serving in the army, and sent to prison for three months.

"I had to work from seven o'clock in the morning until nine o'clock at night, and tolerate the most abusive insults," she said. "A very large number of my friends were arrested, including a young man. The Germans did all in their power to induce him to speak, promising him a free pardon if he would implicate others. The man resisted all their persuasive methods, and they inflicted the most terrible torture. Then he was tried and sentenced to death. Belgians sentenced to death have the right to appeal to the Kaiser, and this young man made the appeal.

"We learned later that the reply was: 'If he will speak his life shall be spared; if not, then he must die.' The day before he was taken out to die he was put in a cell decorated with flowers and given the most costly food to eat. Everything was done by the Germans to persuade him to speak at the last moment, even when he was standing before the firing party he was told it was not too late. Although only a mere youth of twenty-one years, that brave fellow died for Belgium without uttering a word which would give the enemy any information."

Experience has shown that for most crops land which is ploughed in the autumn, gives better returns than that which is not ploughed until spring.

Last year a Kansas canning team, consisting of a mother and her daughter, put up 827 quarts of food products. Of these 627 quarts 337 were fruit, 285 vegetables, 4 soup, 31 meat and 178 jelly. The total value of the output was $274.20, the cost of production $138.33, making a saving in that family's food bill of $135.87. This is just a sample of what was done in that one town by the mother-daughter club, consisting of 29 mothers with their daughters.

THE "SHOVEL V. C."

Wounded British Trooper Saved Another Wounded Soldier's Life.

In the charge that the British made on Hill 70 during the Gallipoli campaign Trooper Potts and Private Andrews were wounded and, on account of the deadly fire of the Turks, were obliged to lie in a hollow between the lines away from their comrades for two nights and two days.

When darkness fell on the third night, says the author of Heroes of the Great War, the two men determined to make a dash for the British lines, cost what it might. At first Andrews was able to crawl with the help of Potts but soon was forced to give in. As Potts crouched beside his companion, wondering how he could carry him, he had an inspiration. He had seen near by a number of discarded shovels, and he now crawled over and got one of them.

In a few minutes he was gently placing the wounded man on it. Andrews sat with his back to Potts and, with his hands over his shoulders, grasped Potts's hands. Although he was becoming weaker every minute, Potts braced himself for the heavy and dangerous task before him. Fixing the shovel to his equipment, he started, carefully and slowly, to drag his human freight down the hill. The journey was risky as well as tedious, for there was the ever-present possibility that they would be seen or heard by the cunning Turkish snipers, who were always active by night.

One of the legs was useless, and that added to the difficulty of getting him down the hill. As they progressed painfully the Turks fired at them; but in spite of the need for haste Potts had to stop about every six yards and lie down, owing to his weakened condition.

At last Potts reached the foot of the hill and gained the shelter of a wood. Here he rested for a few minutes, then went forward to look for a path through the wood, leaving his companion seated on the shovel. He had not proceeded more than twenty yards when suddenly he received a sharp command to halt. He had struck the British lines and found himself facing a bayonet. A hurried explanation saved his life. The first man to grasp him by the hand was Sergt.-Maj. Stubbing, Sixth Royal Fusiliers (Fusiliers who was on night duty. It was he who reported Potts's heroism to the captain, and the captain, in turn, laid the case before the authorities.

Meanwhile, the sentry had gone to the trench and brought back several men. They carried a blanket, and accompanied Potts to the place where he had left Andrews. Potts had started his journey about 9 in the evening, and it was now half-past nine.

Both the wounded men were speedily conveyed to a field-ambulance dressing station, where their wounds were tended. Potts was invalided home at once, and while en route to England received the news that he had been awarded the great prize so dear to every British soldier. He had regarded his thrilling exploit as an ordinary incident, and was startled when he learned how highly it was esteemed.

"You could have knocked me down with a feather," said the "Shovel V.C.," "for I never thought I had done anything wonderful."

THE MOST VALUABLE BOOK

Oldest and Best Manuscript of the Whole Bible in Latin.

In the Mediceo Laurentian Museum in Florence is a volume known as the Codex Amiatinus, which is said to be the most valuable book in the world. We learn that the Codex Amiatinus is the oldest and best manuscript of the whole Bible in Latin, copied from the translation by St Jerome from the original Hebrew and Greek.

To see the book one must be furnished with a special permit from the highest minister of state in Italy, and it is then produced with great ceremony.

The origin of this rare book has been known only about thirty years. It was in the possession of the convent of Monte Amiati for many years, whence it derived its name, but how or when it came there is still a mystery. There is nothing in the contents of the book to indicate its origin; on the back of the first leaf, however, there is a verse in Latin which suggests that it was the gift of one Peter.

Professor Hort, Latin and Greek scholar, discovered about thirty years ago that several words in this verse showed signs of erasure, and had evidently been substituted for others. Both the sense and the meter were altered by this erasure. Professor Hort and other scholars have conjectured that this might be the copy of the new translation, which the Venerable Bede, speaks of as having been taken to Rome by Ceolfrid on his memorable journey.

For 1,200 years the origin of this volume has remained obscure, but now there is but little doubt that the Codex Amiatinus is one of the three Pandects that Ceolfrid caused to be written in these ancient monasteries of England.

The sultry summer past, September comes,
Soft twilight of the slow declining year,
More sober than the buxom, blooming May,
And therefore less the favorite of the world;
But dearest month of all to pensive minds.

—Carlos Wilcox.

Minard's Liniment for sale everywhere.

A PERFECT MEDICINE FOR LITTLE ONES

Baby's Own Tablets are a perfect medicine for little ones. They regulate the bowels, sweeten the stomach, thus drive out constipation, indigestion, break up colds and simple fevers and make teething easy. Concerning them Mrs John Babineau, Frost, N.B., writes: "I have used Baby's Own Tablets and have found them a perfect medicine for little ones." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

HIS SMILE.

He wasn't rich as dollars go,
He didn't have a pile of dough,
He didn't own a motor car
He couldn't often travel far,
He couldn't dress in costly style,
He just possessed a kindly smile.

He had a happy sort of way.
Knew how to work and how to play;
And he respected women fair
And dealt with men upon the square.
And people thought him much worth while
Because he had a kindly smile

You do not need a store of good
The love of real friends to hold;
Be honest, boy, and kind, and true,
And do the work you find to do;
Win openly and not by guile,
And folks will like you for your smile.

—E. A. Guest, in Detroit Free Press

Minard's Liniment Co., Limited

Dear Sirs, I can recommend MINARD'S LINIMENT for Rheumatism and Sprains, as I have used it for both with excellent results.

Yours truly,
T. H. LAVERS.
St. John

Beyond His Means.

Billy had a serious misunderstanding with his elder cousin, Conrad, that he scrupulously concealed from his mother. When he came home from school she said, "Billy, what would you like to give Cousin Conrad for his birthday to-morrow?"

"I know what I'd like to give him," said Billy, vengefully, "but I'm not big enough!"

Grain Yields of the Prairie Provinces.

The estimated total production of wheat in the three Prairie Provinces of Manitoba, Saskatchewan and Alberta is 225,778,500 bushels from 13,619,370 acres, as compared with 208,946,000 bushels from 12,441,350 acres in 1916. In Manitoba the total yield of wheat for 1917 is 41,642,200 bushels, as compared with 27,343,000 bushels in 1916; in Saskatchewan 130,356,000 bushels as against 121,762,000 bushels, and in Alberta 53,780,500 bushels against 59,138,000 bushels. Oats yield 224,193,000 bushels in the three prairie provinces as compared with 260,258,000 bushels in 1916; barley, 43,168,400 bushels against 32,296,000 bushels; rye, 2,488,850 bushels, against 1,630,000 bushels and flaxseed 9,951,500 bushels as against 7,269,600 bushels.

Minard's Liniment Relieves Neuralgia.

The readjustment of international boundary lines after the war will not be the only great problem facing the nations. The readjustment of wages and of prices generally will be necessary, and to readjust wages, and at the same time preserve their relative buying power, will call for the best efforts of the best men to be found.

The Soul of a Piano is the Action. Insist on the "OTTO HIGEL" PIANO ACTION

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers —it's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

FORBID WOMEN TO TALK

Brides on Greek Island of Fano Await Husbands' Return From America

The little Greek Island of Fano, near Corfu, has become known to the Entente fleets and armies as a place where women are forbidden to talk. The island has normally a population of 1824 persons, but most of the men are in the United States, where they work as waiters.

The custom of the island for many years has been for the young man to marry the girls they love best and then after a brief honeymoon, go to America to make their fortunes, returning in a few years to their brides. During this period of the absence of the husband, it has become a custom for their wives, women traditional foe of their beauty, never to talk to men, it is the business of the older women to watch over the young wives, and when strange men approach, as had happened frequently since the war, they are met with a shower of stones.

Minard's Liniment Cures Dandruff.

The red coral, which is used in jewelry, and which is known as precious coral, is mostly obtained in the Mediterranean, the Barbary coast furnishing the dark red, Sardinia the yellow or salmon color, and the coast of Italy the rose pink. It is also found in the Red Sea.

MONEY ORDERS

Remit by Dominion Express Money Order. If lost or stolen, you get your money back.

Somebody has said, "Praise is good for the bones." Try a little of it on the young folks and also on the hired man. It will not spoil them.

Minard's Liniment Cures Burns, Etc.

A properly installed lightning rod system rarely fails to protect the property rod d.

IF FOOD DISAGREES DRINK HOT WATER

When food lies like lead in the stomach and you have that uncomfortable, distended feeling it is because of insufficient HCl supply in the stomach, combined with acid and food fermentation. In such cases try the plan now followed in many hospitals and advised by many eminent physicians of taking a teaspoonful of pure bisurated magnesia in half a glass of water as hot as you can comfortably drink it. The hot water draws the blood to the stomach and the bisurated magnesia, as any physician can tell you, instantly neutralizes the acid and stops the food fermentation. Try this simple plan and you will be astonished at the immediate feeling of relief and comfort that always follows the restoration of the normal process of digestion. People who feel it unnecessary to take medicine for stomach ills, travelers who are frequently obliged to take hasty meals poorly prepared should always take two of these teaspoonfuls of bisurated magnesia after meals to prevent fermentation and neutralize the acid in their stomach.

Sample Each Free by Mail. Address post-card: Bisurated Mag. Dept. N, Boston, U. S. A." Send formula or this notice.

WOMEN! MOTHERS! DAUGHTERS

NOTE—HUXATED IRON recommended above by physicians to be obtained from druggists on a guarantee to refund your money if not satisfactory. Ordinary tablet iron is not assimilated by the system and usually irritates the stomach and bowels. Dosage is three times a day after meals.

WOMAN NOW IN PERFECT HEALTH

What Came From Reading a Pinkham Advertisement.

Paterson, N. J.— "I thank you for the Lydia E. Pinkham remedies as they have made me well and healthy. Sometime ago I felt as run down, had pains in my back and side, was very irregular, tired, nervous, had such bad dreams, did not feel like eating and had short breath. I read your advertisement in the newspapers and decided to try a bottle of Lydia E. Pinkham's Vegetable Compound. It worked from the first bottle, so I took a second and a third, also a bottle of Lydia E. Pinkham's Blood Purifier, and now I am just as well as any other woman. I advise every woman, single or married, who is troubled with any of the aforesaid ailments, to try your wonderful Vegetable Compound and Blood Purifier and I am sure they will help her to get rid of her troubles as they did me."—Mrs. ELSIE J. VAN DER SANDE, 36 No. York St., Paterson, N. J.

Write the Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass, if you need special advice.

GLAMIS

—Walkerton Philharmonic Society Concert, Town Hall, Paisley, Oct. 23rd.

Mrs Truax and daughter of Toronto spent Thanksgiving at the home of her brother, W J McKeeman.

Mrs Cartright, of Milton is visiting the Misses Howson.

Mrs J K McLennan has returned from her trip to Meaford and Wiarton.

Miss Mary Webb spent the holiday at her home.

Mrs Alex Gilchrist returned from a two weeks visit with friends in Niagara

Mrs Robert McFadyen of Toronto spent a few days with friends on the boundary.

Miss Margaret Campbell of Hamilton came home for Thanksgiving.

Miss Eva McKenzie and Miss Alice Coombs of Kincardine called on friends on their way to Paisley to the teachers' convention.

Mr Duncan Guest spent holidays with his uncle, Mr James Guest.

Miss Sarah McKennet of Markdale is stopping at her brother's for some time, Mr John McKennet.

A few of the ladies of St Paul's church attended a missionary meeting at Centre Bruce church on Thursday last.

Miss Jessie Dewar of Kincardine spent over the week end with her friend Miss Reta McKinnon.

Mr Chas McKinnon took a trip to Southampton last week.

A little stranger came to the home of Mr and Mrs Chas Graham on Thursday morning in the person of a baby boy. Mother and son are doing well.

Mr McCauley and Jas McLennan were appointed by the church as delegates to attend the Baptist convention at Woodstock from Wednesday of this week until Tuesday of next.

Mrs McCauley of Tara spent a few days with her son, guest of the Misses Howson.

Rev J P McLennan of Perth is visiting his friends around our burg.

Mrs J C McNally of Sarnia arrived on Thursday last and will stay for some time with her daughter Mrs Chas Graham.

The Red Cross society wishes every thing sent in by the 25th as they want to pack and ship. Now, 1st ends the year of the organization of this society and they will have their annual meeting.

Thanksgiving day was a time of good things for the Baptist young people of Glamis and those who met with them in the third annual Rally of the B Y P U's of Walkerton Assn. The weather was favorable, the delegation large, the singing bright, the addresses earnest and inspiring. These factors with a good local attendance made the day on occasion both pleasant and profitable. We shall not soon forget the excellent addresses nor the fellowship with the visiting friends. Wingham took home the pennant for the largest delegation. Twenty of their number were members of the B Y P U.

TWELFTH OF BRUCE

Potato picking is the order of the day. Mr Colin McArthur of Pais ey was helping Mr Geo Scott to convert his stable.

Mrs Alex McGillivray has returned to Port Elgin after spending a few months with her son here.

Mrs Wm Keyes and daughter of London are visiting friends in this locality.

Mr Cottrill Morris has started ploughing on the Mac farm.

Mr Ed Waring was down to Toronto on a business trip bringing back 20 head of cattle.

Mr Jas Archer purchased four head of cattle from Mr L McPhail last week.

Mr Eli Barnes, jr, has returned home.

Anthrax, or black leg, has broken out amongst the cattle around Cluny. Quite a number have died and several of the farmers have had their young stock inoculated as a preventative.

ELORA ROAD NORTH

Red Cross concert, Town Hall, Paisley, by 40 voices of Walkerton Philharmonic.

Mr Duncan McEachern of Michigan, an old time resident on the tenth concession is visiting his friends here.

Mr Jas Dodgeon is finishing up the threshing on the line.

Mr Frank Stanley has been employed with Mr Chris Ernest.

Mr Garrett Campbell had a bad break in his tile making machinery, having to make a trip to an Owen Sound foundry for repairs.

Miss Katie Campbell was visiting in Owen Sound.

Preserving and Pickling

We have a full line of Pure Spices, White, Cider and Malt Vinegars, Sugars, Jars, Rubbers, Parafine—everything you will require for your Canning and Pickling.

Leave your order with us for Tomatoes, Cucumbers, Onions, Plums, Pears, Peaches, Grapes.

F. CARTER & SON

Shoes, Crockery and Groceries

Stray Heifer

Came to the premises of the undersigned, on Oct. 6th, one yearling heifer. The owner is requested to prove property, pay expenses and remove the animal. Chas D M Hay, Greenock.

PINKERTON

Philharmonic concert in Town Hall, Paisley, Oct 23th. 40 voices. Red Cross.

The annual convention of the South Bruce Sunday School Association was held here on Friday last. Despite the unfavorable weather there was a good attendance. Rev C W Cosens of Walkerton was in the chair and delivered the president's address.

Delegates from the congregations in the constituency reported for their respective schools, all indicating a year of progress. Rev G Grenzenbach of Walkerton, delivered an address on the "Value of a Child," and Miss Bertha Laur, provincial superintendent of the primary and home department, of Toronto spoke on the Primary Department.

In the evening Rev W A Bradley, of Teeswater, delivered an address on "Evangelism in the Sunday School," and Miss Laine spoke again on "Missionary Training in the Sunday School." The following officers were elected for the ensuing year: President, Mr H Hetrick, of Glamis; vice-president, Rev R M Gale, of Pinkerton; secretary-treasurer, Miss Maude McCoy of Cargill; superintendent of the primary department, Mrs P Moore of Teeswater; superintendent of the temperance department, F Purdy Greenock; superintendent of the missionary department, Rev R M Gale of Pinkerton; superintendent of the home department, Mr Wm Little of Teeswater.

The W M S of the Presbyterian church will hold their annual Thankoffering meeting on Friday night. A program of addresses will be given. Lunch will be served at the close of the meeting.

Mr and Mrs Fisher of Pontiac, Michigan are visiting at Mr Birrel's.

Senator Donnelly paid a flying visit to Toronto last week

Rev Mr Gale attended an induction service in Tara last Friday.

EBENEZER

The Ladies' Aid met last week at Mrs J H McFadden's home.

Pics George and Wilmer Martin were home from London at Thanksgiving.

Dwight Potts is enlarging his barn, by adding a new piece.

Mrs Sergison, of Detroit, was over visiting her mother and friends.

Mr and Mrs Garrett, of Peterboro, have been visiting their friends here.

Mr C A Thomas attended the Sunday School convention at Wiarton.

GRESHAM

—Thursday, Oct. 25th, Town Hall, Paisley, Walkerton Philharmonic Concert, for Red Cross.

It is with deep regret we record the death of Mrs Gunn, who passed away at her residence last week, aged 88. She and her husband, late Mr Gunn, came to Bruce in the mid-fifties and took up the lot where they both died. Of the seven children born there remains only one to mourn her loss, Mrs Huston, to whom we extend our deepest sympathy. The deceased lady was a true Christian woman, a spiritual wife, mother and neighbor and has long been a devoted member of the Presbyterian church, Underwood. She is the last woman in this vicinity of the early pioneers.

We regret to learn that Mrs Alex Bridgeford, of the 10th, is at present under the doctor's care.

Threshing is in full swing in this vicinity.

Mr Geo Brown sold a valuable young team last week to Mr Neil Sutherland.

Our teacher, Miss Hanna, took in the teachers' convention in Paisley last week.

Miss Annie McKenzie paid a visit at her home on the 10th Bruce, "Kindale Farm."

Mr Henry Dent, of Underwood, visited friends in Gunnis lately.

Misses Isabel and Jean Aitchison, of Clifford, spent Thanksgiving with their aunt, Mrs A Wood.

Mrs Westman, of the 6th, is at present in ill health. Mrs McLennan, of the 6th, is attending her.

The Craig farm owned by Mr Lionel Shipley, was recently sold to Mr Dougal McArthur, of Kinloss, at \$120 per acre.

The W M S held a very successful thankoffering meeting in Centre Bruce church on Thursday last. The principal speaker was Mrs Rath of Glamis, who gave a splendid resume of the Home Missionaries were taken from Tiverton, Underwood, Glamis, Paisley and North Bruce, the presidents of the different auxiliaries taking part.

[L.S.]

CANADA

GEORGE the FIFTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.

To all to whom these presents shall come, or whom the same may in anywise concern—GREETING:

A Proclamation calling out the men comprised in Class 1 as described by the Military Service Act, 1917.

E. L. Newcombe.

The Deputy Minister of Justice, Canada

WHEREAS it is provided by our Militia Act of Canada, Revised Statutes of Canada, 1906, chapter 41, Section 69, that our Governor-General of Canada in Council may place our Militia of Canada, or any part thereof, on active service anywhere in Canada, and also beyond Canada for the defence thereof, at any time when it appears advisable so to do by reason of emergency;

And Whereas that part of our militia of Canada known as the Canadian Expeditionary Force is now engaged in active service overseas for the defence and security of Canada, the preservation of our Empire and of human liberty; and it is necessary owing to the emergencies of the war to provide reinforcements for our said Expeditionary Force in addition to those whose inclination or circumstances have permitted them to volunteer;

And Whereas by reason of the large number of men who have already left agricultural and industrial pursuits in our Dominion of Canada in order to join our Expeditionary Force as volunteers, and by reason of the necessity of maintaining under these conditions the productiveness or output of agriculture and industry in our said Dominion, we have determined by and with the advice and consent of our Senate and House of Commons of Canada that it is expedient to secure the men so required, not by ballot as provided by our said Militia Act, but by selective draft; such re-enforcement, under the provisions of the Military Service Act, 1917, hereinafter referred to, not to exceed one hundred thousand men;

And Whereas it is accordingly enacted in and by the provisions of an Act of our Parliament of Canada, holden in the 7th and 8th years of our reign, and known as the Military Service Act, 1917, that every one of our male subjects who comes within one of the classes described and intended by the said Act shall be liable to be called out on active service in our Canadian Expeditionary Force for the defence of Canada, either within or beyond Canada; and that his service shall be for the duration of the present war and demobilization after the conclusion of the war;

And Whereas the men who are, under the provisions of the said last mentioned Act, liable to be called out, are comprised in all classes of which Class I is, by the provisions of the said Act, defined to consist of all our male subjects, ordinarily, or at any time since the 4th day of August, 1914, resident in Canada, who have attained the age of twenty years, and were born not earlier than the year 1883, and were on the 6th day of July, 1917, unmarried, or are widowers but have no child, and who are not within any of the following enumerated

EXCEPTIONS:—

1. Members of our regular, or reserve, or auxiliary forces, as defined by our Army Act.
2. Members of our military forces raised by the Governments of any of our other dominions or by our Government of India.
3. Men serving in our Royal Navy, or in our Royal Marines, or in our Naval Service of Canada, and members of our Canadian Expeditionary Force.
4. Men who have since August 4th, 1914, served in our Military or Naval Forces, or in those of our allies, in any theatre of actual war, and have been honourably discharged therefrom.
5. Clergy, including members of any recognized order of an exclusively religious character, and ministers of all religious denominations existing in Canada at the date of the passing of our said Military Service Act.
6. Those persons exempted from military service by Order in Council of August 13th, 1873, and by Order in Council of December 6th, 1898;

And Whereas it is moreover provided by our said Military Service Act that our Governor-General of Canada in Council may from time to time by proclamation call out on active service any class of men in the said Act described, and that all men within the class so called out shall, from the date of such proclamation, be deemed to be soldiers enlisted in the military service of Canada, and subject to military law, save as in the said Act otherwise provided; and that the men so called out shall report and shall be placed on active service in the Canadian Expeditionary Force as may be set out in such proclamation or in regulations; but that they shall, until so placed on active service, be deemed to be on leave of absence without pay;

And Whereas it is also provided by the said Act that at any time before a date to be fixed by proclamation an application may be made, by or in respect of any man in the class to be called out, to one of our local tribunals, established in the manner provided by the said Act in the province in which such man ordinarily resides, for a certificate of exemption from service upon any of the following

GROUNDS OF EXEMPTION:—

(a) That it is expedient in the national interest that the man should, instead of being employed in military service, be engaged in other work in which he is habitually engaged;

(b) That it is expedient in the national interest that the man should, instead of being employed in military service, be engaged in other work in which he wishes to be engaged and for which he has special qualifications;

(c) That it is expedient in the national interest that, instead of being employed in military service, he should continue to be educated or trained for any work for which he is then being educated or trained;

(d) That serious hardship would ensue, if the man were placed on active service, owing to his exceptional financial or business obligations or domestic position;

(e) Ill health or infirmity;

(f) That he conscientiously objects to the undertaking of combatant service, and is prohibited from so doing by the tenets and articles of faith in effect on the 16th day of July, 1917, of any organized religious denomination existing and well recognized in Canada at such date, and to which he in good faith belongs;

And that if any of the grounds of such application be established, a certificate of exemption shall be granted to such man.

And Whereas moreover it is enacted in and by the provisions of an Act of our Parliament of Canada holden in the 7th and 8th years of our reign and known as the War Time Elections Act that certain persons thereby disqualified from voting with each of their sons as on polling day are not of legal age, shall be exempt from combatant military and naval service;

And Whereas it is further provided by our said Military Service Act that applications for exemption from service shall be determined by our said local tribunals, subject to appeal as in the said Act provided, and that any man, by or in respect of whom an application for exemption from service is made, shall, so long as such application or any appeal in connection therewith is pending, and during the currency of any exemption granted him, be deemed to be on leave of absence without pay;

And Whereas our Governor-General of Canada in Council has determined to call out upon active service as aforesaid the men included in Class I, as in the said Act and hereinbefore defined or described;

Now Therefore Know Ye that we do hereby call out the said Class 1; comprising the men in our said Military Service Act, 1917, and hereinbefore defined or described as to the said class belonging, on active service in our Canadian Expeditionary Force for the defence of Canada, either within or beyond Canada, as we may, in the command or direction of our Military Forces, hereafter order or direct.

And we do hereby strictly command, require and enjoin that each man who is a member of the said class shall, on or before the 10th day of November, 1917, in the prescribed form and manner, report himself for military service, unless application for his exemption shall then have been made by him or by another person entitled to apply on his behalf; wherein our loving subjects, members of the said class, are especially charged not to fail since not only do their honour and allegiance require and impose the obligation of careful and implicit obedience to these our strict commands and injunctions, but moreover, lest our loving subjects should be ignorant of the consequences which will ensue if they fail to report within the time limited as aforesaid, we do hereby forewarn and admonish them that any one who is hereby called out, and who without reasonable excuse fails to report as aforesaid, shall thereby commit an offence, for which he shall be liable on summary conviction to imprisonment for any term not exceeding five years with hard labour, and he shall nevertheless, if we so require, be compelled to serve immediately in our said Expeditionary Force.

And we do hereby proclaim and announce that for the greater convenience of our subjects, we have directed that prescribed forms, for reporting for service, and for application for exemption from service, may, at any time on or before the said 10th day of November, 1917, be obtained at any post office in our Dominion of Canada; and that reports for service and applications for exemption from service, if addressed to the officer named on the envelope of one of our said prescribed forms, shall be forwarded by our postmaster at the post office from which the same are obtained to their proper destinations as by our regulations prescribed, free of postage or any other charge.

And we do further hereby notify our loving subjects that local tribunals have been established in convenient localities throughout our Dominion of Canada for the hearing of applications for exemption from service upon any of the statutory grounds, as hereinbefore set out; that these our local tribunals so established will begin to sit in the discharge of their duties on the 8th day of November, 1917, and that they will continue to sit from day to day thereafter, as may be necessary or convenient, at such times and places as shall be duly notified, until all applications for exemption from service shall have been heard and disposed of; and that the men belonging to the class hereby called out who have not previously to the said 8th day of November, 1917, reported for service, or forwarded applications for exemption through any of our post offices as aforesaid, may make applications in person for exemption from service to any of our said tribunals on the 8th, 9th or 10th day of November, 1917.

And we do hereby moreover notify and inform our loving subjects who are within the class hereby called out, that if, on or before the 10th day of November, 1917, they report themselves for military service, or if, on or before that day, application for exemption from service be made by them or on their behalf, they will not be marched to report for duty, or be placed upon active service as aforesaid, until a day, not earlier than the 10th day of December, 1917, which will, by our registrar for the province in which they reported or applied, be notified them in writing by registered post at their respective addresses as given in their reports for service, or applications for exemption from service, or at such substituted addresses as they may have respectively signified to our said registrar; and we do hereby inform, forewarn and admonish the men belonging to the class hereby called out that if any of them shall, without just and sufficient cause, fail to report for duty at the time and place required by notice in writing so posted, or shall fail to report for duty as otherwise by law required, he shall be subject to the procedure, pains and penalties by law prescribed as against military deserters.

Of all of which our loving subjects, and all others whom these presents may concern, are hereby required to take notice, rendering strict obedience to and compliance with all these our commands, directions and requirements, and governing themselves accordingly.

In Testimony Whereof we have caused these Our Letters to be made Patent, and the Great Seal of Canada to be hereunto affixed. WITNESS: Our Right Trusty and Right Entirely Beloved Cousin and Counsellor, Victor Christian William, Duke of Devonshire, Marquess of Hartington, Earl of Devonshire, Earl of Burlington, Baron Cavendish of Hardwicke, Baron Cavendish of Keighley, Knight of Our Most Noble Order of the Garter; One of Our Most Honourable Privy Council; Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George; Knight Grand Cross of Our Royal Victorian Order; Governor-General and Commander-in-Chief of Our Dominion of Canada.

At Our Government House, in Our City of OTTAWA, this TWELFTH day of OCTOBER, in the year of Our Lord one thousand nine hundred and seventeen, and in the eighth year of Our Reign.

By Command,

Thomas Mackay

Under-Secretary of State.

181

"The Infinitely Little" Makes a Big Hit

Rev A J Crighton, pastor of Paisley Methodist church, gave his biological picture talk on "The Infinitely Little" at the East Bruce Teachers' Institute in Wiarton. The chairman, Rev Mr Hardy, B A, characterized the entertainment as a "howling success." He also said that if university professors could teach their subjects with the same simplicity of language and clever wit, the colleges would soon be crowded. The Echo says of it: no more appropriate lecture could be given to an audience interested in educational subjects. Mr Crighton is to be congratulated upon opening the doors to the wonder palace of modern science and research to young and old alike in a simple, humorous way and incidentally affording to his audiences the chance of a liberal education. Microscopic slides of infinitely little creatures and objects had been magnified twelve hundred times by a stereopticon lantern and placed like pictures before the audience.

—Walkerton holds the Keystone bowling trophy, having won it from Southampton.

—Both Col Hugh Clark, M P, and his opponent, John Macaulay of Wiarton, have the two spokes and when they get among the McClays, MacDonalds and Smiths of Lindsay they can talk to the men from the land o' the heather in the original language spoken in the Garden of Eden.—Lindsay Reporter.

—Don't forget the sock shower on Oct. 27th.

—Mrs Seltzer, of Georgetown, is visiting at the home of her sister, Mrs I A Logie.

—Mr Wm Sergison, of St. Thomas, spent the week end with his aunt, Mrs Jas Bepler.

—Little Doretta Gage, who was operated on for a very serious attack of appendicitis, is recovering nicely.

—Mr Archie Campbell, who has been in Alaska for a number of years, arrived here this week on a visit to his friends.

—*Hear Walkerton Philharmonic Society Concert, Town Hall, Paisley, Oct 25th, for Red Cross.*

—Mrs Thos Bryce, Victoria St. south, had her wrist broken when she fell on a step at the back door of her home, on Saturday last.

—Mrs R G Eckel was down to St Catherines for a few days, where Mr Eckel has taken a situation. The family will move to that city shortly.

—Spr Ross Laidlaw is home from Toronto on a couple of days' leave before going to Ottawa to take up the training course of the Divisional Signal Corps.

—Mr and Mrs J B Fleming arrived home on Saturday from a trip to the west accompanied by Mrs Fleming, sr, who has been on an extended visit to members of her family.

—The W.C.T.U. is about to cover the province with an appeal for scraps of silver and gold, minus trinkets, etc, in aid of a fund to defray the expenses of the pay book leaflets and free drinkables (cocoa, chocolate, etc), in the forward trenches.

—Mr Robt. Brown, of townline Bruce and Saugeen, is laid up with a broken ankle. As he was walking beside his wagon, which was loaded with bids, he slipped on a piece of board, and his foot went under the hind wheel, with the result that the ankle joint was dislocated and the bone broken.

—Mrs R Bain and grandson, Glen Sinclair went on Wednesday last to Hamilton, where they will reside for the winter. They were accompanied by Mrs Sinclair who came up for a couple of days following receipt of the news of the death of her brother, the late Pte H J Bain. Mrs Sinclair is superintendent of a department in a large munition works in Hamilton.

Packing Christmas Parcels

All interested in packing the Christmas parcels for our boys overseas are requested to meet in the Town Hall Monday afternoon and evening. Everybody welcome. Don't forget the Sock Shower on 27th.

A Real Treat

The concert to be given in the Town Hall, Paisley, on Thursday evening by the Walkerton Philharmonic Society, should be attended by every lover of music. We don't often have the opportunity of enjoying a programme such as they are putting on. Proceeds go to provide comforts for overseas soldiers.

Hallowe'en Dance

Everybody is cordially invited to attend the **big Hallowe'en dance** to be given **Friday, Nov. 2nd**, in the town hall, Paisley, under the auspices of the bachelors and benedicts. Ladies 25c, gents 50c. All money over and above expenses will be given for Red Cross purposes. Everybody come and enjoy themselves. Good music.

At the Telephone City

Mrs A Sinclair is visiting in Brantford and will attend the unveiling of the monument erected in that city to Alexander Graham Bell, inventor of the telephone. The ceremony is of particular interest to Mrs Sinclair, as the first working telephone line of about eight miles was through the farm on which her home was at that time, and she was in the receiving station at Mount Pleasant when the first message came over the wires. Messrs A A Sinclair and S Ballachey went down on Tuesday to be present at the unveiling. Mr Ballachey was living at Brantford when the inventor was experimenting on a short line of two or three miles.

The Exemption Boards in Bruce

The second member of each Board has now been appointed, making them as follows in this county: Paisley—S Ballachey, M A Halliday (Chesley); Port Elgin—D J Izzard, D Gillies (Southampton); Walkerton—F Reanie, John Johnston, Kincardine—Geo D Morrison, R J Stewart; Tara—Jas A McDonald, Wm Taylor, Lucknow—Jos E Agnew, Geo Moffat (Tecswater); Wiarton—J J Tyson, B E Miller; Lion's Head—Roy Hacking, M D, J H Cooke. The Board for this district will likely hold sessions in Chesley as well as Paisley.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

"The Hardware Store of Better Values"

Will Support Union Government

John Macaulay, Liberal candidate in North Bruce, has issued a statement to the effect that he will support the Government of Ottawa in all war measures. Mr Macaulay says that while the Conservative Government failed lamentably in many important duties devolving upon it, he believes he should give his assistance to the new cabinet. He appeals to the electors with considerable confidence upon the principles indicated—as a Liberal unionist.

Conscription Does Not Apply

Mr J W McPhee, from Wilcox, Sask., is here visiting his father, Mr Angus McPhee, Flora road north. Recently the visitor resigned his position as manager of a branch of the Bank of Commerce to join the Flying corps. He was examined in the west, and accepted as a recruit, but when he reached Toronto was rejected as physically unfit and given his discharge just as conscription came into force. He is one of perhaps a dozen young men to the whole Dominion who are in a peculiar position, as, although never a soldier, the Military Act does not apply.

Died in Brantford

Mrs Henry Rudolph, an old resident of Bruce, and a former citizen of Walkerton, died at the home of her daughter, Mrs Josephine Bush, in Brantford, on Sunday evening last, aged about 85 years. The deceased, with her husband, came to Bruce township in 1870 and settled on lot 8, con 7, Brant, where they continually farmed until twenty years ago, when they disposed of the farm to their son, Mr John Rudolph, who now occupies it, and retired to live in Walkerton. About eleven years ago her husband died, and after living alone for a time here, she went to live with her son John in Brant where she remained until last New Years, when she left to reside with her daughter Mrs Bush, in Brantford. She had been ailing for about three years with a complication of heart and kidney trouble, and her death was not unexpected. She was a woman of sterling worth and splendid character, and much regret is expressed at her passing. Besides the two noted above, she leaves two sons—Henry of Paisley and Fred of Denver, Colo, and two daughters, Mrs J Carey of Stratford and Mrs P Ewing of Saginaw, Mich. The funeral was held from the home of the deceased's son, Mr John Rudolph, in Brant on Wednesday morning to the Chesterton R C church and cemetery.—Herald and Times

Deputy Sheriff Dead

Charles Franklin Harris, who has for many years been deputy sheriff of Bruce County, died at his home in Walkerton on Oct 12th, aged 63 years. Mr Harris was a very efficient official, thorough and painstaking in the work of his position. He was a prominent member of the Masonic order, and had taken the 32nd degree.

Knox W. M. S.

The Thankoffering meeting of Knox Church W M S was held on Thursday afternoon with a good attendance. Miss Miller, president, presided. Mrs G C Little offered the dedicatory prayer, Mrs Thos Wilson, of Walkerton, Presbyterial president, gave an interesting and instructive address based on "The open door." A solo was well rendered by Miss Emily McInnes. A pleasing feature of the programme was the presentation of a Life Membership Certificate from the members of the auxiliary to Mrs E McInnes as compensation by an address read by Miss Nettie Scott. Tea was served at the close of the meeting. The offering amounted to $65.

Will Make it $1000 for Red Cross

The immediate result of the work of the Red Cross collectors' rounds on Thursday was a subscription list totally $959.50. This was no near the objective aimed at that the lists were kept open for a few days, and have since been addive odd amounts daily, so that there is every promise that the even thousand will be reached or passed before the last subscription is booked. As in previous years the collectors met with very few refusals, and only an odd person was anything like niggardly towards the cause. Some of the contributions were much larger than either of the previous years, and a great many increased their givings, so all made up a liberal addition to the total. Paisley has done nobly by the Allies' cause in giving a big percentage of her sons to the army, and is not lagging behind in giving financial support to Patriotic or Red Cross funds. The full list of subscriptions will be published in next week's Advocate.

BORN

ARCHER—At Paisley, on Oct 19th, to Mr and Mrs A E Archer, a daughter.

DIED

McDERMID—In Elderslie, on Oct 23rd, John McDermid, aged 87 years and 7 months.

Funeral on Friday. Service at the house at 2 p m.

Rich Yet Delicate—
Clean and Full of Aroma.

Is blended from selected hill-grown teas, famed for their fine flavoury qualities. Imitated yet never equalled.

THE STREET THAT RUNS THE WORLD

THE LITTLE CUL-DE-SAC OF DOWNING STREET.

In This Short Street Decisions Are Made That Affect the Most Distant Parts of the Earth.

In one of the shortest and yet most wonderful of all the streets of London the decision was taken that this country should enter into this war, and in that same street it will be settled when and how we are going to end the war, so far as Britain is concerned, and what terms we are willing to give to the enemy, says a London writer. This street decided war. This street will decide peace.

Every time you read of a great push or a new front or a fresh phase for the amazing reconstruction of the general lines of all of us you may depend that the central decision of all these big things is taken in a not very large room in a dull-looking house in this short street.

The Centre of the Stage.

Here the British Government, and important statesmen and soldiers from our gallant Allies meet and make moves in the great struggle.

The decisions are made in the secrecy of certain back rooms in one of the three houses which are numbered 10, 11, and 12, in the little short thoroughfare which you would pass by without looking at, were you not aware that it is the most important street in the whole world.

It is Downing Street!

I might tell you of the silent visits to this street by Sir Douglas Haig, Admiral Beatty, Admiral Jellicoe, General Nivelle, General Petain, General Cadorna, Ministers from Petrograd Washington, Rome, Argentina, Paris, China, Peru, Madrid, Tokio, and most of the other important places in the world.

This is Downing Street. It leads from Whitehall to St James' Park, and you can walk through it from end to end in about two minutes.

English or American.

What is this Downing Street? It used to have more than three numbers in it, but numbers 7 to 9, inclusive, were knocked down years ago, in order to build up the sides of the great grey block of Italian architecture, containing various Government offices, that form a giant quadrangle on your left, and the rather dingy buildings which house the Treasury and other departments on your right.

As a residence of statesmen, Downing Street goes back to the days of Walpole. It is rather fitting at this time of the great Alliance between the United States and the British Empire to recall the fact that a man named Downing, from whom the street took its name, has been looked upon as an Englishman, but was claimed by my late friend, Mr Choate, the United States Ambassador, in a public speech some years ago, as an American. Certainly Downing went to America; but we are more concerned with the fact that the short street call by his name is not only the seat of the Government of the British Empire, but it is also at this time the scene of great decisions, upon the success of which depends the welfare and liberty of the whole civilized world.

Where History Is Made.

Let us take the three numbers that are left—Nos. 10, 11, 12.

To begin at the top of the street, No. 12 is the headquarters of a mysterious official called the Patronage Secretary to the Treasury. If great honors are given to distinguished men and women here and in different parts of the Empire, the particular member of the Government who has the detail work in hand presides at No. 12 Downing Street. The business for the immediate future of the House of Commons is drawn up and settled also at No. 12. In addition, this dull-looking brick house performs many other services for the State.

Next door is No. 11. This is the official residence of the Chancellor of the Exchequer. Here works Mr. Bonar Law, and herein he resides. He can cut about the building with an old briar pipe in his mouth, and can pass from No. 11, with its documents of finance and its tables of millions and thousands of millions into No. 10, to consult the Prime Minister, or onward into the long, dark passages of the Treasury building that faces Whitehall, and he can do it all without putting on his hat and going into the street.

No. 10 Downing Street.

It was at No. 11 that Mr. Lloyd George drew up "the People's Budget," which caused some people to revere him as a great statesman and social reformer, and others to scowl at him as "the Welsh Attorney" who was going to drive British capital abroad and ruin us all.

What is, perhaps, more to the point at present—certainly with our brave soldiers at the Front and our heroic Allies—is the fact that it was at No. 11 Downing Street that the swift brain of Mr. Lloyd George, then living there as Chancellor of the Exchequer, thought out the early details of the then unborn Ministry of Munitions, which has now produced such gigantic stocks of guns and shells that the mind reels at the mere mention of the figures or the places they occupy at the Front.

Of the three houses, by far the most important, of course, is No. 10. Here are held the Cabinet Councils, the far-reaching conferences of the great political, military, naval, and diplomatic representatives of Britain, France, Italy, Russia, and the United States. Indeed, the very preliminaries to the act of "the great Republic of the West" in coming into the war at all issued, I have no doubt, from No. 10 Downing Street.

An Army of Experts.

While the Downing Street front of the house is insignificant and rather dingy, the garden front, facing the Horseguards' Parade, has a fine open outlook. There is a garden on that side of the building; but at present, instead of gay society parties, this garden is the home of improvised shelters, where the new and wonderful secretariat of the British Government does a great deal of its work.

Here, the Prime Minister and the War Cabinet have ready at their hands a remarkable corps of men, in which each individual is an expert on some phase of the variegated work of the brain. If, for instance, some question comes up about Mesopotamia, the Prime Minister, almost with the ease of a man reaching down something from a peg, can call upon an alert, living expert on that part of the world, and all the documents of all the problems, political and military, bound up with that division of the world war.

The House of Secrets.

So on Russia, America, Navy questions, Army clothing, munitions, the very thoughts and ideas of great nations whose opinions about us and the war might have an important bearing on the prosecution of the struggle—men versed in all these are ready to hand.

So, unseen by the public, great decisions are made by our noble Allies and ourselves affecting the lives of millions the world over. Couriers come and go with secret despatches. Men, great in war and finance, slip quietly in at the portals, or drive away in some smooth-running car on some mysterious mission to some destination unknown.

Thus, small, grey Downing Street is the most important thoroughfare in the world!

HOW TO WIN SUCCESS.

Have Confidence in Yourself and Do Not Lean Upon Others.

Power is the goal of every worthy ambition, and only weakness comes from imitation or dependence on others. Power is self developed, self generated. We cannot increase the strength of our muscles by sitting in a gymnasium and letting another exercise for us.

Nothing else so destroys the power to stand alone as the habit of leaning upon others. If you lean you will never be strong or original. Stand alone or bury your ambition to be somebody in the world.

The man who tries to give his children a start in the world so that they will not have so hard a time as he had is unknowingly bringing disaster upon them. What he calls giving them a start will probably give them a setback in the world. Young people need all the motive power they can get. They are naturally loaners, imitators, copiers, and it is easy for them to develop into echoes or imitations. They will not walk alone while you furnish crutches; they will lean upon you just as long as you will let them.

One of the greatest delusions that a human being could ever have is that he is permanently benefited by continued assistance from others.

If your grain contains a large percentage of foreign material, clean it. It keeps better. Feed low grades and screenings on the farm.

To remove rust stains from any fabric saturate stain with juice of a lemon and rub in salt. Then hold over the steam of tea kettle and see stain disappear like magic.

About the House

DOMESTIC SCIENCE AT HOME

Thirteenth Lesson—Bread.

When making bread use a thermometer and scale for accuracy, so that you will have a positive knowledge of how and what you are doing. Modern inventors have made it possible for the baker to manufacture bread of a uniform quality.

The housewife's lack of knowledge of this most important part of the home cooking has resulted in the numerous large baking plants that are a feature of all large cities. Theory has caused many failures; few women really understand the underlying principles of fermentation.

History tells us that the Egyptians were probably the originators of bread. The following fable illustrates the discovery of the method of converting grain into bread.

The story goes that a slave, while grinding the grain one day between two stones, a sudden shower wet the meal. The slave fled from the storm, forgetting in his haste about the meal. When the storm was over and the sun had come out he returned to his grinding. He found that the sodden mass that was the grain before the storm had come was now a dry hard cake. This was the first production of unleavened bread.

Modern breadmaking dates back from the Romans, who derived the art from their Greek and Egyptian captives of war. Historians state that the Romans made unleavened bread in 200 B. C.

In many portions of the Old World this style of bread is still made. In this country unleavened bread is made into biscuits and crackers, sometimes called beaten biscuit. It depends upon the amount of air that is beaten or incorporated into the dough to give it its lightness.

Flour.

A knowledge of flour is necessary for successful baking. There are two distinct kinds. One is known as spring and the other as winter wheat. Spring wheat flour contains the largest percentage of gluten. This spring wheat is ground into two distinct varieties, known as soft spring wheat, and hard spring wheat.

Winter wheat is divided into two varieties similar to that of the spring wheat flour, namely, red winter flour, which is the hard winter wheat flour, and the soft winter wheat flour. The last-named flour contains a large percentage of starch. It is used for pastry and cakes.

To get successful results the flour must be blended. The fancy patent flours that are on the market are especially prepared for all-around family baking purposes.

Pastry flour, of soft winter wheat flour, will not make good bread, owing to the low percentage of gluten. The flour should be kept or stored in a room that averages about 70 degrees Fahrenheit and in a container that may be kept closed and away from all foods that have a strong odor. For successful results the home baker must have:

Good flour of a reliable brand.
Good, active fermentation.
Yeast food.
The proper amount of salt.
The proper temperature.
The proper manipulation.
The proper baking.

When starting to make bread select a reliable brand of flour. Store it in a proper container in a place that has the right temperature. Sift the flour before using. The use of compressed yeast eliminates all doubt and uncertainty of the old style liquid and dry yeast.

For successful results it is necessary to supply the yeast with a food for active development. This food is not found in the flour, therefore it must be supplied. The food necessary for the active development of the yeast is sugar. Sugar supplies the carbon which is a necessary principle of the process of fermentation.

Salt is added to bread for two purposes—first, to flavor the bread and make it palatable, and also to supply one of the mineral elements essential to the human body. Second, to control the process of fermentation. If too little salt is used the bread will lack flavor and be of a coarse, rough texture, while if too much is used the action of the yeast will be retarded and the bread will show a loss of volume.

Temperature is the controlling factor in successful bread-making. The room in which the bread is made must be free from all drafts. The proper temperature is 78 degrees Fahrenheit in summer and 80 degrees in winter. Use a thermometer and eliminate the guesswork.

By this is meant that the dough must be worked sufficiently by rolling and kneading, if made by hand. If a breadmixer is used the bread must be worked for the period of time as per instructions as supplied with the machine.

Time for hand manipulation is from fifteen to twenty minutes and from five to ten minutes when using the mixer.

Baking.

The baking of the bread will require care. It must not be placed in an oven of uncertain temperature, then the door closed and the bread left to luck. The oven should register 375 degrees Fahrenheit when the bread is placed in it. The bread should be watched carefully and if the heat of the oven is not evenly distributed (that is, if one part of the break baked faster than the other), the bread must be moved or turned.

Remember that while the oven registers a high degree of heat, if you were to place a thermometer in the center of the loaf of bread you would find that it requires nearly fifteen minutes for the heat to reach the center of the dough to heat it to the boiling point or 212 degrees Fahrenheit. For this reason sufficient time must be given after the bread is well colored for the interior of the bread to be well baked.

The time allowance should be from thirty-five to forty minutes for medium-sized loaves, weighing about sixteen to eighteen ounces before baking; from forty to sixty minutes for loaves weighing from eighteen to twenty-six ounces.

Shortening is used to make the bread render and to neutralize the acid in the flour; it also furnishes fat to the food value of the bread.

Two methods are employed for the making of bread.

First, the sponge method. This calls for a sponge of light batter. The mixture is set to rise and then the remainder of the flour, salt and shortening is added. The dough is then worked for fifteen minutes. After this it is allowed to rise for the second time. Now it is molded into loaves, given a short proof and then baked.

Second, the straight dough method. In using this method the salt, shortening, sugar and flour are mixed with the liquid and yeast into a stiff dough that can be worked without sticking to the hands. This method is quicker, because it is possible to have the bread finished in about four and three-quarters hours. This method gives very satisfactory results.

Milk, part water and part milk, or all water may be used in making bread. One medium-sized potato may be added when the water is used. Milk increases the food value of the bread. The milk must always be scalded and cooled before using.

The Sponge Method.

Sift the flour and then set it in a place where it will have a temperature of 80 degrees. Now to prepare the sponge. Heat the utensil in which the sponge is to be made by filling it with hot water. Let the water stand in the utensil until it is heated thoroughly; then empty out the water and dry the vessel.

Then place in a bowl three cupfuls of liquid, testing it with a thermometer to see if it is exactly 80 degrees Fahrenheit. Crumble in the yeast cake and add two tablespoonfuls of sugar and three cupfuls of sifted flour. Beat with a spoon for five minutes. Cover and set in a place free from all draft for one and one-half hours. Then add six cupfuls of flour, one and one-half tablespoonfuls of shortening and two teaspoonfuls of salt.

Knead for fifteen minutes, then put the dough in a greased bowl; now turn it over. This will grease the dough and prevent it forming a crust while rising. Cover and let rise for two hours.

Mold into loaves, place in well greased pan, and set away to rise for one hour. At the end of this time bake the loaves in an oven registering 375 degrees Fahrenheit for forty-five minutes.

Use a scale when ready to mold the loaves. Weigh twenty ounces to each loaf. Divide the balance of the dough into rolls, weighing two ounces each. This recipe will make two loaves of bread, weighing, after baking, about seventeen and one-half ounces apiece, and ten rolls.

Straight Dough Method.

Two cupfuls of water, 80 degrees Fahrenheit, one and one-half tablespoonfuls of sugar, one and one-half tablespoonfuls of shortening, one and one-half teaspoonfuls of salt. Mix well. Crumble in one yeast cake, stir until dissolved; now add six cupfuls of flour. Work the dough and then knead well for fifteen minutes. It must now be smooth and elastic. Put in a greased bowl and set to rise in a place free from all drafts, with a temperature of 80 degrees Fahrenheit for three hours. At the end of this time mold into two loaves. Put in greased pans and let rise again for fifty minutes. Now, bake in an oven of 375 degrees Fahrenheit for thirty-five minutes.

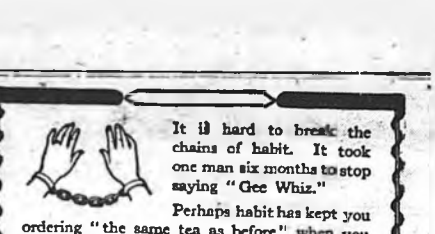
This amount of dough makes two loaves of bread, that will average about fourteen ounces apiece, or one loaf and eight rolls, weighing two ounces each.

Points to Remember.

Use good flour.
Sift the flour.
Scald and cool all milk or water used in making bread.

The temperature for success must be 78 degrees in summer and 80 degrees in winter; also the room must be free from all drafts.

Thorough manipulation.



Follow the recipe closely. Remember that judgment must be used. It is impossible to gauge the accurate amount of flour to any given amount of liquor. Flours vary in the amount of moisture they absorb; for this reason it easily will be seen that one brand of flour will require a little more or a little less moisture than another. When the amount of liquid is known, it is a very easy matter to withhold one or two tablespoonfuls of flour or to add the same amount.

The yeast must be fresh. By this is meant that it must have good color, a pleasant yeasty odor and be firm to the touch. The compressed yeast is the best kind to use.

Brush the top of the loaves of bread, when taken from the oven, with melted butter.

Place a pan of boiling water on the floor of the gas oven while the bread is baking.

Use a thermometer first, last and always. Don't guess at your work. Know what you are doing. This is the baker's greatest tool. He takes no chances; he knows, and in knowing lies the secret of his success. Any thermometer will do that will register from the freezing point to 100 degrees Fahrenheit, when preparing the bread, but do not use this thermometer in the oven. A regular oven thermometer can be purchased at a very reasonable price. It will save its cost in three months. The assurance that the oven temperature is of the right degree conveys to you a peace of mind that is above money value.

It is hard to break the chains of habit. It took one man six months to stop saying "Gee Whiz."

Perhaps habit has kept you ordering "the same tea as before" when you had intended to buy Red Rose.

This will be a reminder. So next time you will order Red Rose. You will be pleased, we are sure.

Kept Good by the Sealed Package

LONG-LIVED SEEDS

Some Have Germinated After a Century Has Gone By

There are few questions more hotly argued by gardeners than the life of seeds.

Some people are prepared to swear that wheat and pea seeds taken from mummy cases thousands of years old have germinated. On the other hand, scientific farmers will assure you that the seed of wheat loses its life within, at most, ten years.

A good deal of evidence undoubtedly exists to support the theory that many seeds are exceedingly long-lived. Some years ago a grass lawn at Culmstock, in Devonshire, was broken up and turned into a risery. The following spring the whole of the ground was covered with most exquisite pansies! This lawn had not been disturbed for fully a century, and no pansy seed had been sown anywhere near. In any case, the pansies that have come up did not resemble those in any neighbouring garden.

The only possible solution seems to be that the seed had lain buried in the ground, awaiting its chance to germinate.

The longest known survival of any seed is that of a certain Egyptian lily. A dried seed-pot kept in the South Kensington Museum contained seed which was tested and found to grow after a period of ninety-five years.

Melon seed has grown after being kept for forty years. Turnips will last eight or ten years. It is asserted that haricot beans have germinated after lying by for a century.

Mary: "Has your sweetheart been ordered to camp?" Jane: "Yes; now I must fall back on my reserves."

Our best friends may be those who tell us of our faults and show us how to correct them; but we never quite appreciate those friends.

Forgetful.

Uncle Ezra—I hear your boy has joined the aviation corps.

Uncle Eben—Yes, and I'm afraid he won't make good.

Uncle Ezra—What makes you think so?

Uncle Eben—He's so forgetful that he's liable to take the gasoline up and come down without it.

Those who take up the study of the bee have need to handle the subject gently.

PARKER SERVICE
Known Everywhere — Available Everywhere

Just because there is not a "Parker" Agency near you is no reason why you should do without "Parker Service."

The excellence of our work is so well known that it need only be mentioned here.

But the convenience of our service by mail to distant customers is not. Articles of any sort can be sent to either by parcels post or express, and returned in the same manner. We pay the carriage charges one way. Every precaution is taken to ensure their safety in transit.

So many things can be "rescued" by cleaning or dyeing that the value of this service will be apparent to everyone.

When you think of cleaning or dyeing think of PARKER'S.

Send for a 1918 copy of our useful and interesting book on cleaning and dyeing.

Be sure to address your parcel clearly to receiving dept.

Farm Crop Queries

Conducted by Professor Henry G. Bell

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

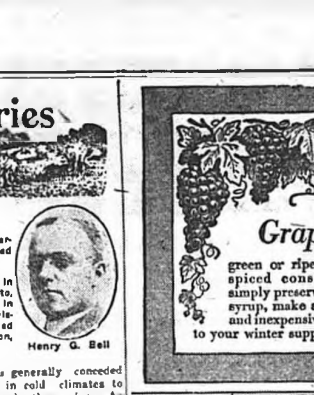
Henry G. Bell

G.P.W.:—I have a field of well-manured sandy loam that is literally infested with horse nettle, bluegrass and smartweed. The field is now drilled to corn and soy beans, but the ordinary methods of cultivation has had but little effect on the weeds. I wish to soon sow rye among the corn. Can I seed this field to some kind of grass next spring to use for pasture when the rye comes off that will assist in getting rid of these weeds?

Answer:—If you sow rye among the corn and it gets a fairly good start, I would advise you to plow it under about the end of May or early in June next year. Cultivation will kill out a large amount of the horse nettle, bluegrass and smart weed. As soon as the ground is thoroughly worked up, I would advise seeding with a temporary pasture mixture which has given good results at Guelph. This mixture is a follows:

10 lbs.	common red clover
8 lbs.	timothy
2 lbs.	alsike
Total 20 lbs.	

This mixture will produce a satisfactory pasture early in the spring and will maintain stock until early in autumn. In order to insure a good catch of the grass and clover seed, I would advise at the time of planting to apply 200 pounds per acre of a fertilizer carrying 2 to 3% ammonia, and 10 to 12% available phosphate acid, unless it is possible for you to apply five or six loads of well rotted manure per acre. In your case the fertilizer would be preferable, since it supplies just the same plantfood but does not carry weed seeds. When the stock are taken off this pasture next fall the ground should be plowed immediately and disked and harrowed until it freezes up. This will destroy the weeds in question.



R.M.:—Is it a better time to set out fruit trees in the fall than in the spring, and should they be mulched?

Answer:—It is generally conceded better practice in cold climates to plant fruit trees in the spring. As a rule, they are taken out of the nursery rows in the fall and are "heeled" in; that is, a trench is dug in a sheltered place and the trees are set in at an angle or upright, being covered half-way up the stem. As soon as frost is gone in the spring they are taken out of the trench and planted at the desired distance in the new orchard ground. Care should be taken to prepare the ground in good shape. Many farmers lose their orchards by not giving deep and thorough preparation to the soil. As soon as the trees are well set the soil should be kept loose to a depth of at least two inches by sufficient cultivation so that the much needed moisture will not escape.

An addition of fertilizers or barn manure both at the time of planting and later as a side-dressing to the trees will greatly assist in giving them a vigorous start.

W.F.:—Would you please tell me of the culture of hops for commercial purposes?

Answer:—For hops, the plants are set in spring at about the depth from which the roots were dug up. If the hops are being propagated from cuttings, these cuttings are set in a shaded and well-tilled seed-bed in the summer. They are transplanted from this seed-bed the following spring. The shoots should be cut back in early spring until the third year so that the plant will store up sufficient strength. In preparing the soil see that it is well enriched with rotted manure or fertilizers, or with both. When fertilizer is used, from 200 to 300 pounds per acre carrying 3 to 4% ammonia and 8 to 10% available phosphoric acid with as much potash as possible, should be applied. If you have a supply of wood ashes, it is a good thing to add a good top-dressing of ashes to the ground, since the ashes carry both potash and lime.

Housing Farm Animals

BY I. J. MATHEWS.

The time of year has come when all the animals on Ontario farms must be housed and this matter of stabling is of some importance. The arguments on each side of the question must be weighed and each given due consideration in planning for the comfort of the animals and for the pocketbook of the owner.

Degree of Warmth

Among stockmen to-day there is quite a dispute as to how warm the stables should be for different animals, and this question is answered largely by the type of animal and by the requirements which are made of them. It is very true that cold animals will use up the body flesh in furnishing warmth and the flesh thus used up can only be replaced by good food which is expensive. Carbohydrate feeds do not generally range as high in expense as the rich protein feeds, but present prices are very high indeed. It seems then, that any precaution or extra care in housing will be well repaid by the ease of keeping which will result. It costs somewhat more to winter a feeder over and keep him growing it he is kept out doors in the cold, than as though he is sheltered from the elements. Then there comes the valid argument that the labor involved is one of the greatest costs in any of the farm activities and so the problem of the feeder is to balance these things over against each other and decide which will prove the most profitable.

With fattening stock, especially where labor and building materials are high, feeders find it more economical to use the open shed for their stock. This reduces the labor for the forage and grain can be easily distributed to the stock and the labor of removing the manure is reduced to the minimum. Of course, more bedding must be supplied in this case, but that is a small matter when compared with the labor considerations. Added to this, the open shed which affords protection for the animals in inclement weather is also a factor in conserving the manurial product. The more nearly the air can be entirely excluded from the manure, the more perfect will be its preservation and for this reason, the constant trampling of the stock keeps the fertilizer elements from passing off and prevents fire-fanging.

Dairy Cows Must be Kept Warm

The moment we pass from fattening animals to dairy cattle, the problem becomes altogether different and the solution must assume another angle. Since the product of the cow is largely protein and fat, she cannot do her best at milk producing and at the same time use up a large amount of the food which comes into the body for supplying heat. She cannot be expected to do this; the good cow usually does one or the other, but seldom proves very successful at both the same winter. Cows that are forced to stand out in the cold usually commence to go dry when cold weather comes on, and while it is not true that housing is all there is to making a cow give milk, it is true that it influences the milk flow to quite an extent.

The exact temperature at which the dairy barns ought to be maintained is a disputed point; some authorities claim that 70 degs. F. is about right, while others say the proper temperature is some 30 degs. below the first figure. Owing to the fact that the covering of hair decreases the necessity for artificial heat, most successful dairymen agree that the temperature for dairy cows ought to be maintained at from 40 to 60 degs. F. This does not mean that the barn should be supplied with steam heat or artificial heat of any kind, but it does mean that the barn should be so built and cared for that in the coldest days in winter, the inside temperature never goes below 40 degs. F.

Avoid Cold Drafts

Fresh air sufficiently warmed never hurt any animal but cold drafts have brought on many ailments which have resulted disastrously. The mistake that is made in the construction of a great many Ontario stock barns is that of excluding the air too much and not providing any means of ventilation at all. Bank barns seldom are ventilated at all and while they may be just right as far as warmth is concerned, the absence of plenty of pure air is detrimental to the stock; they are compelled to re-breathe the same air so many times that the body processes cannot take place as they should.

Since fresh air is so free, and since it can be so easily and inexpensively supplied to the stock, and at the same time not subject them to drafts, there is little excuse for not supplying it. I know that the moment I speak of ventilating a stable, someone is going to think immediately of a high-priced ventilating system which will take more money than he can rake and scrape to pay for but such a system is a luxury and not a necessity.

Method of Ventilation

The thing to be remembered in any method of ventilating is that cold air is heavier than warm air and so, if the air is allowed to get out through the top of the stable, the stable will be cold for all the fresh air will be supplied at the bottom. On the other hand, if all the fresh air is supplied at the top through one large opening and is conducted out at the bottom through another single exit, the pure air is not sufficiently warmed, and besides, a draft is created.

In some stables, enough air can get in around doors and windows, but others are too tight so a stale stable results; open the doors in winter and stable odors and impure air roll out in sufficient quantities to be noticeable in the extreme. In order to have the air well warmed, it should come in at several places, preferably near the top of the stable.

It has been found that the average 1,000-lb. cow breathes 2,804 cubic feet of air in twenty-four hours. There should not be more than three per cent. of breathed air in the stable at any one time and on these calculations there should be provided 3,600 cubic feet of pure air per day for each 1,000-lb. animal. Fresh air is just as essential as is good food.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

Readers:—The following are some games which you may consider suitable for your Hallowe'en party:

Fortunes in the Cellar—Before the party assembles prepare walnuts by taking the kernels from them, substituting a little piece of paper and then gluing the shells together. The writing on each is the same. It should read somewhat after this fashion: "On the stroke of twelve steal silently to the farthest end of the cellar and dig. Keep this strictly secret. Do not let any one see you go down cellar. To tell any one will break the spell." The walnuts are hidden around the room where the party is to be held. They may be searched for at a given warning from the hostess. On the stroke of twelve, or any other hour you have mentioned in the slip hidden in the walnuts, all the players will, after trying to sneak away from each other to get down cellar, find themselves in the cellar, which must be dimly lighted. Digging with tin spoons at the farthest end will reveal little envelopes with fortunes, which have been prepared before the party. These fortunes can be made very funny. A day or so before the party let a couple of the young people who are giving it get together and make up queer prophecies about those who are coming. All members of the party must sit down right then and there in the cellar and read their fortunes aloud.

Seeing Your Future on the Stairs—Before the party secure a hand mirror without any glass in it. Some one will be sure to have a broken one. Then try to get photographs of all of those who will be at the party. Tell the boys as well as the girls that they must walk down the cellar steps blindfolded with a mirror in order to see a picture of their future mates in the mirror. One is blindfolded at a time and is led down the dark cellar stairs with an electric flashlight and with the mirror in his hand. In the mirror has been placed a picture of the girl about whom it is most fun to tease the boy who is on the stairs. Remove the bandage from his eyes suddenly. He must look over his left shoulder in the mirror the moment it is removed. Of course the result is funny. As the trick is played on each one in turn those who have seen their fate may follow the blindfolded one down the stairs, thus increasing the fun.

There are many other games that every one knows about that never fail to make a success of a Hallowe'en party. Bobbing for apples, pinning a little broom on the witch, whose picture has been drawn with shoe blacking on a big sheet, are always fun. For the latter a prize can be given to the one who comes nearest to the witch's hand. Of course, it is fun for every one to come in costume. Try an advertisement costume party. Let each one come dressed up like some character seen frequently in ads. The one who guesses what most of the ads are gets a prize.

Mrs. M.:—To fill a hot-water bag correctly heat the water until it is nearly boiling. Fill the bottle a little more than one-third full. Before putting in the stopper lay the bag flat and double the upper part over. This drives out the steam and prevents an accumulation of it. It is steam that makes a hot-water bag hard and uncomfortable for the patient.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns. If not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

A brush in time saved mine.

THE HYGIENE OF THE TEETH.

Digestion doesn't begin in the stomach; it begins in the mouth. If this truth were realized a great many—though far from all—cases of dyspepsia would "fold their tents like the Arab and as silently steal away" never more to affect the sufferer. The first thing necessary to good digestion is to have the food thoroughly chewed so that it is in a condition to be readily mixed with the digestive juices, the first of which is the saliva in the mouth. How necessary then, it is to keep the mouth, the teeth and the gums in good condition. How salutary to this end is the advice to go to the dentist at least once a year, and have those precious masticators overhauled and kept tight!

The teeth should be brushed at least on rising and at bedtime and the mouth should be rinsed with water after each meal. Any one of the many dentifrices now in market is right. Also clean the spaces between the teeth with dental floss. Soft wooden tooth picks are well enough; but picks made of hard substances are apt to injure the precious enamel. You would be surprised to hear how much tooth irregularity in children is due to the mouth breathing habit; see therefore that any possible adenoids or enlarged tonsils in your child's throat are attended to. Have your children get the teeth preserving habit in early childhood.

QUESTIONS AND ANSWERS.

Asthma and Climate.

I have been troubled all my life with asthma. But after I got my growth I was not bothered so much until about 3 years ago it has been getting gradually worse. On the least bit of exertion I feel choked up and I wheeze. I am so short of breath I can scarcely work at all. I am bothered mostly at night, as I can't breath lying down. Tuberculosis was suspected in my case; but the examination of the sputum for the germ showed none. I am advised not to stay in this climate and we are undecided where to go. Will you give me your opinion. We would like to locate in California. Is that climate suitable? I know what benefits one may not help another. I am 33, height 5 ft., weigh 86 and am anemic.

Answer—The "negative sputum" test is not an absolute one. I am sending you the signs of early tuberculosis. Do not worry; only be sore and then get well. Your weight is 20 below the average of your age and height. No climate can be assured beforehand to be beneficial in asthma. California should be excellent for you. But as the going would be something of an experimunt I would advise you to precede your family by a few weeks; then, if you are being benefitted the others can come after. Best wishes.

Cancer of the Tongue.

Is cancer at the root of the tongue in a person of fifty possible to operate on, or should it be left alone? Or should X-Rays be used? or radium?

Answer—The examining surgeon must decide. The rule is to operate. The condition, I am bound to say, is a grave one, but recoveries after operation have been reported. This is I believe the best procedure. Some cures by radium have been reported. I do not believe the X-rays would be efficacious in such a case.

When fed alone to young pigs, corn produces relatively slow gains at a high feed cost. Supplemental protein feeds will make faster gains at a lower feed requirement per unit of grain.

Just now, when grains are high in price, farmers should understand that there are other kinds of hog feeds which are cheap, and one of the cheapest is rape pasture.

For the first day after farrowing the sow should be fed somewhat lightly, and the full feed should be advanced to by degrees during the first ten days.

Pigs on pasture must be given some grain in addition if they are to gain at all.

The Two Towns.

"Pray can you tell me, little maid,
The way to Grumble-town?"
And first she pointed up the road,
And then she pointed down.

She pointed up and pointed down—
Then shook her pretty head:
"I've never been to Grumble-town,"
The little maiden said.

"Then maybe you can show me, child,
The Town of Pleasantville?"
"Oh, yes, indeed," she said, and smiled:
"It's just beyond the hill

"Good sir, it's just beyond the hill;
And if you'll come with me,
I'll take you into Pleasantville;
That's where I live," said she.

Some Comical Tenants.

"Are you the landlord?" Bobby sat up in bed with a terrible start and a creepy feeling along his spine. "Are you the landlord?" persisted the cross voice. He stared around wildly and saw to his dismay ten queer little men about three inches or less in height hopping toward him over the covers.

"Oh, Oh!" he stuttered and drew his legs up suddenly that the whole ten tumbled head over heels down the incline. Quick as lightning they picked themselves up and started climbing over the hill made by his knees, one a little ahead of the others waving a paper and crying, "Are you the landlord?" Bobby's heart nearly leapt out of this throat with fright, but he swallowed hastily and managed to say in a shaky voice, "I, I, I'm a bo-o-o-oy; who-o-o are yo-o-ou?"

"Come on!" shouted the man with the paper to those who were still struggling up the hill; "this is the fellow." Then running like a squirrel up Bobby's shirt, he shook the paper in his face crying, "This is our notice. We are going to move. Our houses are not fit to live in, do you hear?"

"Yes sir, all right sir, what can I do?" cried Bobby in a panic of fright.

"All right," repeated the little man in exasperation. "You'll see how all right it is when we have gone. That's what I say, good tenants are never appreciated." By this time all the little fellows had clambered up and stood in an accusing line on Bobby's knee. The most important one now opened the paper that he had been flourishing so madly and read in a very stern voice:

"We, the undersigned hereby give due notice that premises Right Shoe and Left Shoe, situated at extreme southern points of Right and Left Leg Avenues, will be vacated at noon tomorrow, owing to unlivable conditions. Signed:

R. G. Toe,	L. O. Toe,
R. F. Toe,	L. F. Toe,
R. T. Toe,	L. T. Toe,
R. S. Toe,	L. S. Toe,
R. L. Toe,	L. L. Toe,

Before Bobby could seize the paper another dream came rushing along and away went the ten little men.

"Father," said Bobby next morning at breakfast, "I must have a new pair of shoes right away!"

No wonder he wanted them quickly, for my goody, who would like to be deserted by his toes?

A Helping Hand.

Here is one way in which to offset the loss of strength in rural communities by reason of our boys joining the colors or migrating to the cities. Every week there are boys from eight to twelve years of age becoming homeless. There are great possibilities for good in these lads. They would make good farmers if taken early into the family and brought up through the next few years.

These are not delinquent boys, but boys who by no fault of their own have been cast upon the mercy of the world. They deserve a chance to win success.

Scores of our readers in Ontario rural homes could to advantage avail themselves of this opportunity to do a kindness and at the same time help themselves.

If labor and equipment are not made to serve to their full capacity throughout the year, the output of the farm will be lowered, and the profits correspondingly decreased.

INTERNATIONAL LESSON
OCTOBER 28.

Lesson IV. Ezra's Return From Babylon—Ezra 8. 13-36. Golden Text, Ezra 8. 22.

Verses 21-23. Ezra collected the exiles, who were to accompany him, by the river or canal Ahava, in preparation for the long journey to Jerusalem; but before the caravan got under way he proclaimed a fast so that the people might humble themselves before their God and pray for an auspicious journey. Fast—An occasion of humiliation before God, an acknowledgment of the public's entire dependence upon the divine favor for a safe journey. Ahava—A branch of the Euphrates or canal in the vicinity of Babylon. Its exact location can not be determined. Straight way—A successful or safe journey. Ashamed—He did not want to create the impression that the people of Jehovah had to depend upon human agencies for protection. On the contrary, he assured the king that their God would care for them, for he always protects those who put their trust in him and destroys those who forsake him. Nehemiah did not hesitate to accept an escort (Neh. 2. 9). Enemy—Desert robbers who might trouble the caravan. The ultimate success of the enterprise proved that Jehovah heard the prayers.

24-27. Ezra appointed special custodians for the gifts and offerings. Chiefs—Leading members of the priestly class. Even—Better, with margin, "besides." The thought seems to be that Ezra selected a commission of twenty-four men, twelve representing the priesthood and twelve the laity. Sherebiah . . . . Hashabiah—Called Levites in verses 18 and 19. Either the Levites are here counted as laymen, or the text is corrupt. Batten, following in part First Esdras, reads: "And I set apart from the leaders of the people twelve, and from the priests of the temple Sherebiah and Hashabiah, and with them ten of their brethren." Offering—Reference is made to these gifts in the king's decree (Ezra 7. 15ff.). Talents—While there is some uncertainty regarding values, the silver talents figure up to about a million dollars, the gold to about three millions, the are thousand dariecs to about five thousand.

28-30. Ezra carefully impresses upon the custodians their great responsibility. Holy—The custodians are holy because they are set apart for a special task in connection with the service of Jehovah, the vessels because they are to be used in his temple. Chiefs—The commission guarding the treasures was, on reaching Jerusalem, to hand them over to the representatives of the priests and Levites and of the laity already there. Chambers—Rooms in immediate contact with the temple, serving as storerooms for vessels, provisions, etc., and in some instances are residences for priests.

31, 32. Arrival in Jerusalem. First month—The month Nisan. From Ezra 7, 8 it appears that about four months were consumed in making the journey. Delivered—A convincing proof of the divine favor. Caravans were always exposed to attacks from roving Bedouin; in this case the large amount of treasure carried made an attack especially inviting. Abode—In the sense of "rest." They rested for three days and then delivered the treasures to the proper authorities.

Some months ago Sir Joseph Flavelle, in a patriotic speech, let go a very fervid sentence that listened something like "Let profits go hang! It is now quite evident, since his examination before the government commission, that he intended the words to apply only to munition makers. The profits from pork he always and still desires should go to—Flavelle & Co.

The point now to be regarded in connection with the Military Act is the necessity for every young man of the proper age to report at once for medical inspection. This step cannot be evaded. Later on he will be given no chance of exemption. No application for exemption will be considered except from those who have undergone medical examination. [illegible] K.

The Union Government is coming out all dressed up in a brand new Liberal policy uniform. They are promising to "carry on" in a real progressive way, and if they fulfil the promises we soon won't know them from a real Liberal cabinet. They're not going to devote any special attention to the Quebec vote, either. This will be just a little better than either a straight Conservative or Liberal government could do. Here's success to them.

Political Union and Church Union

(Guelph Mercury)

Not a few of the pulpits throughout the country have been making quite pointed comments on the political situation at Ottawa, and other issues that are very closely connected with the conduct of the war. The high prices that have followed in the wake of the conflict have come in for a very fair share of criticism and it is well that they should. Others have scored the politicians roundly for not coming together in the interests of the common cause. They have, in goodly number, and we grant with good reason, pointed out that union was the proper and right thing. And, while they are on this ground, could the ministers be surprised were some of the politicians to turn round and re-address some of the sermons on "political union" to the pastors, taking the precaution to label them "church union." It's not safe for an editor who is on fairly good terms with the ministerial association to draw this parallel too far. It's worth more than a passing thought though.

DON'T MISS THE POINT!

There is a man in this part of this world who represents, to our way of thinking, a pretty good average of human nature. Whenever the preacher in his church delivers a very hot sermon against some special kind of sin, this man gets enthusiastic and goes around to the vestry to tell the preacher what a fine sermon it was. Then he goes home and repeats it to his brother and they talk over the points and the people the sermon hits the hardest. But this particular man never sees when the sermon hits him.

Early next month the biggest public campaign ever put on in Canada will be opened to get subscriptions for the fourth Canadian war loan, the Victory Loan. The thing people in this district must bear in mind is: that the appeals are directed to each and every one of them. It is not merely the well-off men and women who are being asked to invest. It is everybody. The little sermons which will be "preached" in the advertising should not be taken as hints to the well-to-do people only. Every man and woman should watch for these advertisements and start now to gather up the necessary money to buy either a fifty or a hundred or a five hundred or a thousand dollar bond. In the United States there were about 4 subscribers to the first American loan out of every 100 persons. They only received 4¼ per cent. In Canada for the last war loan there were only about 41,000 subscribers or say 4 in every 700. Yet in Canada the interest was much higher—on the Victory Bonds that will probably be issued to yield about 5½ per cent.

The first thing anyone should do is to get rid of the idea that there is any sacrifice involved in investing in this loan. It is true that the patriotic spirit is appealed to and it is equally true that a great and generous response is expected on that ground. But the new war loan is a straightaway business proposition: safe, profitable and convenient. Every man and every woman with as much as fifty dollars to spare should own one of these new bonds, and not only that, but should help to show others the worth of these bonds by recommending them everywhere. The readers of this paper are among the most thrifty, prosperous and public spirited in the Dominion. When the subscriptions to the Victory Loan are added up from the various districts and subdistricts we expect them to show that this part of the great Dominion has been true to its traditions and just to its opportunities.

Children Cry
FOR FLETCHER'S
CASTORIA

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times much to city printers or engravers?

Blankets

Penticostals Were Disappointed

The Hepworth Program says:—The squib editor learned from a credible source that the Penticostals of Lion's Head were sure they had discovered the day when we would be translated from this world Wednesday, 16th Sept., 1917, was the day. We thought a lot of those people, as we do of Christians who happily enjoy their religion (deliver us from the longfaced) but didn't think they would be carried away by an oft exploded theory. We didn't phone up and ironically ask if "they had gone up yet?" Of course the day passed as other days. We trust they will bear up under their disappointment and have the grace to acknowledge the mistake.

Farm For Sale

MEETS in Oddfellows' Hall on the third Monday evening of each month, at 8 o'clock. Sojourning brethren are welcome.

E. ARCHER, C.R.
WM. ARCHER, R.S.

(Over)

Prevention of Eye Trouble.

Prevention is better than cure.
It is cheaper.
It is possible when cure is impossible.
Eye trouble may be avoided by the timely use of glasses, averting discomfort, suffering and permanent impairment of sight. We are properly equipped to adjust glasses and guarantee satisfaction.

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

I. SHOEMAKER
Jeweler and Optician

Central Business College

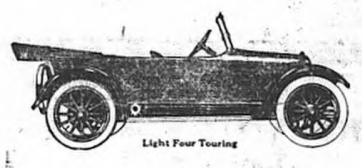
CUSTOM TAILORING is More Important than ever this Season

Custom Tailoring is your only assurance of clothes satisfaction. It is your only guarantee of getting all wool fabrics, high quality workmanship, correct style and absolute perfect fit.

The ready-to-wear market is in an unsettled condition—many poor fabrics are being used, poor workmanship is employed, and you get no guarantee of satisfaction.



Play safe. Buy good clothes—smart, individual refined clothes—in short, buy our custom tailored Fall Suits and Overcoats at $18 to $35.

To the Ladies:

Our Ladies' Tailoring trade has now developed to such an extent that we have a larger number of orders than at any time in the past, and we are in a position to produce the new designs in styles most satisfactory to patrons.

Overland

Light Four Touring

A Favorite In Canada

The steady demand for Overland Light Four touring cars in the Dominion is the strongest argument we can advance in their favor.

This sturdy little Overland traveler has proved a favorite right from the start.

It appeals strongly to those who want and need a moderately priced car—one that is not too big and costly to maintain or too small for riding comfort and pride of ownership.

The Overland Light Four strikes a happy medium.

Let us show you this car. Let us demonstrate its advantages.

A ride in it is mighty convincing.

Exemption Tribunals.

Exemption Boards have been chosen in such a way as to make them absolutely independent and removed from all influence. There are over 1,250 boards throughout the country, each composed of two men, one appointed by the county judge in the district concerned and one selected by a joint committee of Parliament. Being familiar with local conditions where they sit, the members are well-fitted to appreciate such reasons for exemption as are put before them by men called up.

Exemption will be granted to those who can establish that it is in the national interest that they remain in civilian life. This is for the Exemption Board to decide after having received full information in each case.

The grounds on which exemption may be claimed (which are similar to the grounds recognised in Great Britain and the United States) are as follows:—

(a) That it is expedient in the national interest that the man should, instead of being employed in Military Service, be employed in other work in which he is habitually engaged.

(b) That it is expedient in the national interest that the man should, instead of being employed in Military Service, be employed in other work in which he wishes to be employed and for which he has special qualifications.

(c) That it is expedient in the national interest that, instead of being employed in Military Service, he should continue to be educated or trained for any work for which he is then being educated and trained.

(d) That serious hardship would ensue if the man were called on active service, owing to his exceptional financial or business obligations or domestic position.

(e) Ill health or infirmity.

(f) That he conscientiously objects to the undertaking of combatant service and is prohibited from doing so by tenets and articles of faith, to adhere to the sixth day of July, 1917, of any organized religious denomination existing and well recognized in Canada at such date, and to which he in good faith belongs.

(g) That he should be exempt because disfranchised under the War Time Election Act.

No Claim for Exemption should be put forward unless one or other of these grounds in fact exists, and no loyal citizen should assist in, or allow himself to be made a party to, any Claim for Exemption unless thoroughly satisfied that it is made in good faith.

Exemption may be applied for by the men selected themselves or by their parents, near relatives or employers. Application for exemption must be made on printed forms to be found at every post office, which are to be filled in and left with the postmaster if exemption is desired. The postmaster will forward the form to a Registrar, who will send it to the appropriate Exemption Board. In due time, then, the Applicant will get notice as to when he must present his case before the Board.

Issued by The Military Service Council.

138

Tax Sale of Lands

NOTICE is hereby given as directed by the Assessment Act, R.S.O. 1914, Sec. 148, s.s. 1, that a sale of lands for Arrears of taxes will be held at the hour of 10 o'clock noon, at the Council Chamber in the County Building, in the Town of Walkerton, on Friday, the 2nd day of November, A.D. 1917, when all the lands advertised for sale for public auction, unless the taxes and charges are sooner paid, the following described lands in the Township of Greenock, viz.: Part of lot 13, King St., Pinkerton, being that part of said lot conveyed in instrument registered in the registry office of the County of Bruce as 8311 Greenock.

A complete list of lands to be sold for taxes is published in the issue of the "Ontario Gazette" of July 28th to August 18th inclusive, and in the "Hepworth Penerson" July 26th to October 17th inclusive, 1917, a copy of which may be obtained on application from the undersigned.

If it be required to hold an adjourned sale it will be held on Friday, November 16th next, at the above mentioned place and hour.

Letters from the Soldiers

Sightseeing in Scotland

Norman Allen, with the dental corps at Witley Camp, writes the following interesting letter home: I have just returned from a splendid trip thru' Scotland. I have a great pile of views which I intend sending home later. I don't suppose I'll ever forget the trip. I took the Scottish Flyer from King's Cross, London, at 8.30 p.m. arriving in Edinburgh at about 6 a.m. a distance of about four hundred miles. I only stayed in Edinburgh a short time, as I expected to return to it again. I went up by Edinburgh Castle to get a good view of the city. From there one gets a sight which I believe is unsurpassed in most of the prettiest cities of the world. You can look down on Princess St, Scott's Monument, Waverly station, the North British Hotel, and Calton Hill. When I returned to Edinburgh the second time I went down High St. where I saw the house and church of John Knox and several other old historical buildings and finally Holyrood Palace which was formerly the home of the Scotch sovereign's. From the square in front of Holyrood you can look over towards two mountains the highest peak of which is called Arthur's Seat. Away over the other part of the city the winding Forth may be seen dotted with different members of the Grand Fleet. From Edinburgh I went to Glasgow which to my mind is the most enterprising and modern city in this country. It is business from the word 'Go!' and everywhere there is evidence of bustle and up-to-dateness. There are some very pretty spots in Glasgow, too, such as the Art Galleries, Glasgow University and Glasgow Cathedral, which is a fine building both outside and in. It has a fine pipe organ whose notes echo and re-echo in the corridors and loft. From beside the Cathedral one can look over on the Necropolis which is a cemetery on the side of a high hill and makes a splendid landscape in the twilight with its statutes and monuments. Nelson's monument in the heart of the city is a huge structure although not quite as high as the one in Trafalger Square, London. From Glasgow I went up to Loch Lomond on which I sailed up to Inversnaid. From Inversnaid a returned Canadian officer and I went up to Rob Roy's Cave. Loch Lomond and Ben Lomond need no description. We experienced all sorts of weather during our day's trip, from pouring rain to sunshine. Next day I sailed down the Clyde, through the ship yards to Greenock. Ship building is going on at a prodigious scale and partly as a result Glasgow is teeming with wealth. From Greenock I went to Paisley by train. Paisley is an energetic, pretty and historical place. There are some booming industries located there, among them Coates' and Clark's mills. Thread, shawls, etc, are the chief manufactures. We tried to get thru' Coates' mills but were unsuccessful, as a permit was necessary, and this could only be got at Glasgow. We did go thru' the Abbey, however. It dates back many centuries and is splendidly furnished in the interior. The building is not exactly plumb, probably owing to the ground giving way under part of the foundation. I think the Town Hall, of which I am sending a picture, is the greatest building. Renfew Glen, near Paisley, is considered a very pretty spot but I did not have time to go out to see it. Near it is the birth place of Wallace. I returned to Glasgow and next morning went up to Stirling where I saw the field of Bannockburn—nothing much to see—Stirling Castle and Wallace monument. From the castle one gets a splendid view of the surrounding country, the main features of which are the hills and the winding Forth. On the hillsides many shepherds find a living and it is interesting to watch them drive their flocks thru' the town with the help of their intelligent Collies, who keep a watchful eye on the stragglers without causing them any bodily harm. From Stirling I went on to Perth, which is a quiet old fashioned place but rather pretty. Scone Palace is near Perth. It used to witness the crowning of the Scottish monarchy and the famous stone of Scone came from there. The Fair Maid's House of Sir Walter Scott is also located there. The Tay River adds considerably to the scenery of the place. From Perth I went north to Aberdeen, which is in a class by itself being almost entirely built of grey granite. The streets are very clean and the granite buildings have a clear cut substantial appearance, and apparently do not tarnish or become grimy with age. The tram service is very good but not to be compared with that of Glasgow which is one of the finest in the world and far ahead of London. Marischeal College in Aberdeen is a wonderful piece of architecture both for its massiveness and detail of design. A Scotch Australian sailor and I went through the building and right up to the top of the tower. From this point one can see for many miles in any direction. On a clear day Peterhead is visible, although a long way off. The people of Aberdeen are very hospitable, but this applies to all of Scotland.

From Aberdeen I went to Peterhead, and was down at the wharf in the morning and watched the fishing boats and trawlers coming in with their morning's haul. It was interesting to see the fish auctioned off. The auctioneers had wooden mallets, hammers or anything to aid in emphasizing their remarks. They all seemed to think that their success in selling depended on their ability to bellow. The fish were sold in lots of five barrels at a price ranging from about thirty-five to forty-five shillings—pretty cheap food. Peterhead is as much a red granite town as Aberdeen is grey and the former is a much smaller place. The largest prison in Scotland is located there. From Peterhead I went by bus to Boddam I visited the red granite quarries there and walked along the coast to Cruden Bay, thru' which the other railroad line passes. This was the best part of my trip. There must be three or four miles of red granite cliff pierced here and there by lagoons with sides of almost perpendicular granite. I came across an old sailor who rowed me around thru' the lagoons along the shore. In many of these lagoons there are caves in the rock which once were the storehouses of North Sea pirates and smugglers. It is an awe-inspiring sight to watch the sea rolling in against the cliffs and the swell running up the openings, dashing against the rock and receding back again, from several points to which I had to crawl and then hang on to moss and weeds with my hands I could look down about three hundred ft on some small arm of the sea swelling and falling. On one large boulder which almost forms an island, being joined to the main cliff by a natural granite bridge several hundred feet above the water, there were numbers of ravens perched on ledges or leaving them to search the sea in hope of finding a meal. Slains Castle is a sight not soon to be forgotten. It stands right near the Tws Fe'n of which I am sending a picture. The castle is built of red granite on a solid foundation of natural granite and commands a splendid view of the sea. It was built by the Earl of Errol who was Provost-Marshall of Scotland. This rock bound section of the coast you will probably remember from your trip over here. The Bullers of Buchan—The only thing that I have seen in the line of natural phenomena to be compared with this is the Niagara Falls, although of course of totally different character.

I had a great breakfast in the Kilmarnock Arms Hotel in Cruden Bay. They certainly do know how to make scones and oatmeal cakes. From Cruden Bay I returned to Aberdeen, where I only stayed a few hours and then started for Edinburgh via Dundee. I crossed the Tay Bridge and later the Forth Bridge by train. I got off on the south side of the Forth Bridge and obtained a permit to walk across. It is a mile and three quarters in length and if I remember rightly three hundred and sixty five feet from the water. The highest ship in the world can pass under it comfortably. It is certainly a great feat of engineering.

I came down to London from Edinburgh by a special troop train via the East Coast. From London I went out to Hampton Court Palace which was a flourishing institution in the time of the Tudors and Stewarts. It was built by Cardinal Wolsey and confiscated from him by Henry VIII. The interior is a world of luxury. It must have been fine to be a cardinal or a king in those days. The walls throughout are covered with tapestry curtains and paintings by famous artists. In the Great Hall biblical and mythical pictures are woven into the tapestry in a wonderful manner. Some of these are about twenty feet in length and about ten in height. One shows Abraham offering up Isaac. Another Lot's wife turning to a pillar of salt, and another Moses coming down with the tables of Commandments.

"How do you get down off an elephant?" asked the drill sergeant of a private in the Kings' Guards.

"You climb down," retorted the private.

"Wrong," replied the sergeant.

"Well, then, you grease his sides and slide down." "Wrong again," said the drill instructor.

"Well, mebbe," said the private, "You take the trunk line down."

"No, no," said the irate sergeant, "You don't get down off an elephant; you get it off a goose."

MAXWELL

Most Miles per Gallon — Most Miles on Tires

We used to say:

"The Maxwell's real greatness is on the inside—the mechanical parts you can't see."

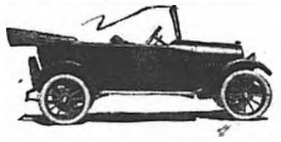
But the wonderful new 1918 Maxwell has just been delivered to us.

Now we've changed our tune.

Today we say:

"The Maxwell is great inside and out—great in EVERY POSSIBLE way."

Always the most efficient—most economical light car built, the Maxwell now has—



A 6-inch longer wheel base, making it larger and roomier.

Heavier and more rigid frames—6 inches, instead of 3 inches deep—and yet is 50 pounds lighter.

Compensating underslung rear springs—the last word in spring suspension at any price.

A sloped windshield—style of body equal to the highest priced cars.

Friends, the 1918 Maxwell is the best looking, best built car for the money we ever saw!

Touring Car $1045

Roadster $1045; Coupe $1540; Berline $1540; Sedan $1540. All prices f. o. b. Windsor

The AUTOMOBILE

The Care of Lamps.

With traffic officials scrutinising the lighting system of every automobile these days it is well for the motorist to give a little attention to that part of his car's electrical system which makes night driving possible under any conditions.

According to an expert there are three situations which may lead to an ineffective lighting arrangement, any one of which the man who drives his own car may remedy himself. Briefly stated they are:—Headlights in poor focus, reduced reflection and failure of bulbs to burn.

"If your headlights burn brightly but fail to illuminate the road it is an indication that the lamps are not properly focused," he says. "This may easily be remedied by placing the car about fifty feet from the side of a building and adjusting the headlights until the bright spot from each bulb is slightly more than three feet in diameter and the two illuminated areas almost touch. The lower edge of each circle of light should be about eighteen inches from the ground.

"Reduced reflection results chiefly from tarnished spots and dust on the polished silver reflecting surfaces. A chamois soaked in alcohol and then dipped in dry, powdered rouge should be used for tarnished areas. Great care must be taken so that no grit will scratch the reflector.

"The failure of headlight bulbs to burn may be traced to defective bulbs, poor connections or short circuits, or 'grounds', in the lighting system. If one light goes out the bulbs should be interchanged, and this will indicate whether the trouble is in the bulb or the wiring. When lights fail to burn with the electric starter working and the automatic circuit breaker closed the cause is commonly an open circuit, due either to a break in the wiring or a poor connection in the socket at the back of the headlight. If one light burns more brightly than the other when the dimming switch is used a 'ground,' or short circuit, is usually present."

A HOT FIGHT IN PARADISE WOOD

WHERE THE GALLANT FRENCH MET THE ENEMY.

A French Colonel Describes Episode Near Chemin-des-Dames, or Ladies' Walk.

The French colonel, with a few of his officers, received us in a peasant's modest house, a simple house of a story and a half, with the typical sloping roof of the French country districts, writes a war correspondent from France. Here in a scantily furnished room he bade us welcome and without ado led us to a table on which a map was spread. And in quiet tones he told of a recent encounter with the Germans.

"We stood in the trenches in Paradise wood on the Chemin-des-Dames, opposite Courtecon, still in the hands of the enemy. You know the Chemin-des-Dames. It is or was, until torn to pieces by shellfire, an ancient Roman road elevated above water level through a low section resting upon a height, rebuilt in the Napoleonic era on the plateau rising north from Soissons and northeast of Rheims about the village of Craonne.

A Veritable Inferno.

"It is upon the outlined form of this plateau that the front shapes itself at this section, its edges of spur-shaped land dentiled between little valleys.

"Paradise wood is partially inclosed in one of these valleys. The trenches of our regiment were in its very center, first, second and third line with communications. On the fourth day after our occupation of this sector, at 8 o'clock in the evening, a hail of Boche shells began to fall upon our lines. It was a veritable inferno, great shells sent toward us and bursting everywhere about us, destroying small abri and observation, breaking connection with the rear. That meant the immediate establishment of a relay courier system, in which man after man picks up a message and carries it under fire to a given point. It's life-giving business, and to avoid loss of the message in transmission I divided the relays into two sections, starting from different points and going toward the objective by different routes. Sometimes both reached home; sometimes but one. And often during that day neither.

'They Shall Not Pass!'

"We know an attack would follow the bombardment. Probably the attack would begin in close formation immediately after the bombardment ceased. And when this moment should be announced by a lull in the storm of shells thrown upon us, our men stood to take to the open, to leave their deep shelters and girded to the loins, receive the Boche shock. We had only one aim—the aim of Verdun and all the rest of it—They shall not pass!'

"But on this occasion the grenadiers of the Guard left their trenches before the bombardment ceased, while their artillery was still launching shells upon the territory to be assaulted.

"Here and there along the line our defenses were a wreck. Here and there, too, we had no men living to defend them. Here and there finally, we held him, a little group of heroic men standing fast in a hell of fire. One of the couriers sent forward with instructions from myself to Major —— saw the enemy's preparation for assault and understood it was to be something new, an assault with a continuous fire, instead of an assault after fire. He immediately abandoned his mission, returned to me and delivered the information, indicating to me on this very map the portions of our line that were destroyed, the portions still holding. I sent him back for further reconnaissance. He never returned.

Hand-to-Hand Fighting.

"But the information he had given me enabled me to learn that a mitrailleuse squad was pouring lead with deadly destruction into the Boche, and that two companies had counter-attacked with the Boche attack and broken through, to be immediately surrounded; that Captain ——, with one company, had come to the rescue and broken the Boche line. I sent forward a fresh battalion in counter-attack. They went through the enemy line like a train through a tunnel and took as prisoners Boche troops that had held some of their comrades captive for twelve minutes.

"There was death all about. Hand to hand and body to body, men fought and died and won and lost, amid shell explosion, and bayonet thrust. Later we found two of our machine guns intact and every man of each crew dead about them. We fought the fight all night and gave more than we lost. At dawn we held true to the previous night's position, save for a few meters here and there, and by 9 in the morning we had regained these. Not a foot of our line was in enemy hands. Not an observation post belonging to us was taken. All our line was ours. Our dead and theirs attested why."

FIND BONES OF ST. GEORGE?

Remains Found in Palestine Under Fine Sixth Century Mosaic.

A fine mosaic of the early sixth century Christian Church has been discovered by British troops in Palestine, northwest of Beersheba, under works recently occupied by the Turks. It bears a Graeco-Syriac inscription referring in superlatives to a Saint George, whose bones were found beneath the mosaic.

The latter has been somewhat injured by Turkish trench digging, but is, nevertheless, a fine specimen. It is for the present stored at a depot in Cairo, where it will remain, pending a decision as to its ultimate disposal.

If you have cut your finger badly and can not stop the bleeding, tie it up in a piece of soft rag that has been soaked in turpentine. This will stop the bleeding and make the cut heal quickly.

OVER THE TOP! A SOMME TRAGEDY

ONE OF WAR'S MISFORTUNES GRAPHICALLY TOLD.

A Water-Bottle Narrates Some Dramatic Incidents in Its Career At the Front.

As I lie in the old shell-torn stable I often consider myself a tragedy of the Great War. My one great hour of glorious life came—and found me unworthy.

I am a common, ordinary soldier's water-bottle, made of iron, enamelled a deep blue, and further protected from rust by a covering of felt. Some of the later bottles—conscripts, I call 'em—are composed of aluminium. I had seen a year's hard work before they ever thought of answering the country's call.

Left in the Cold.

Eighteen months ago my soldier brought me out here, and I have, therefore, experienced two winter campaigns. Now, I can't abear cold weather; it limits my value so much. For weeks on end I am forced to carry the same drop of water, and never once will my owner put me to his lips.

You may not believe this, but it is honestly true. I once had six inches of water frozen solid inside me.

Perhaps my soldier prefers to mix his water with something else occasionally, for pungent and suspicious liquids have been poured down my protesting neck. Of course, it is a military crime to carry anything except aqua pura in my family, but a good soldier is never afraid to take risks.

It is only in Arctic weather, however, that Bill desecrates me with other liquids.

In the trenches it is no simple matter to get pure water. A party of men are sent behind the line to a well in a shattered farmhouse, or, preferably, to the battalion water-cart, to fill up empty petrol-tins, the water having first been chlorinated to make it suitable for drinking. They carry back a tin in each hand, and I and all the other bottles are filled from these.

A Tragedy on the Somme.

I have a reputation to maintain. I'm a water-bottle. Sometimes I think an A.S.C. driver will be collaring me, in the belief that I'm a tin of petrol.

I was a water-bottle, I should have said. Ah, I still imagine I belong to those happy days, instead of being a miserable makeshift candlestick in a rest-billet.

My tragedy happened on the Somme. Bill's dearest friend was named Joe. They enlisted together, and by great good fortune had managed to stick to each other all through their service. I can tell you, Joe's bottle and I exchanged confidences on many a dusty route march.

Worth Its Weight in Gold.

Well, our battalion was ordered to capture a certain wood, whose name I must not divulge. I fairly shook in my carrier during the freeze bombardment that preceded our attack, but my nerve returned immediately Bill climbed out of the trench and walked across the intervening eight hundred yards.

Though machine-gun bullets pinged all around us, Bill strolled along, unharmed. He stopped to light a cigarette, and—ah!

No matter, we took the wood. We searched every corner of it, and routed out a large number of Fritzes. Then, as my soldier was making his way to the northern end, to consolidate a position, the familiar voice of Joe called out to him.

"Bill!" he cried. "Water, Bill, for God's sake!"

My soldier rushed over to the splintered tree under which he lay, pulling me out of my straps as he ran.

"Joe, old chum," he said, "stopped a nasty one, have yer? Cheer up, sonny! Here's yer water. I'll get yer back to our lines all right!"

And he pulled out my cork and raised me to his wounded friend's mouth.

Then—then he noticed, and he flung me from him like a thing accursed. For when he had stopped to light his cigarette a machine-gun bullet bored right through me. And now, when my water would have been worth more than liquid gold, I was empty!

A few vanilla bulbs planted now will make flourishing clover like plants all winter.

A SON'S LETTER.

Written by a British Soldier Just Before He Fell in Battle.

Here is a fine manly letter, full of heart and free of cant, which appeared the other day, in an Isle of Wight newspaper.

Thousands of Canada's young men have entered, and are now entering, upon the stern realities of army life, and thousands of fathers are bidding them good-by with choking throats. It may help a bit to read this clean, strong-souled youth's last words. He was killed in action shortly after indicting them.

The business of being a father is quite the most complex and difficult of all the tasks that come to men, and to get such a letter as this must be to any father a sweet reward.

"To My Father:—This is a final message for you to read when I am dead. There will be so little else—just the brief official notification. The Secretary of State for War regrets . . . may be a belated letter or two, speaking only of the small happenings of the day; perhaps the tale of a brother officer as to how I fell; beyond that nothing. And therefore now, beforehand, I say farewell.

"There is no need of many words. But I want first to thank you as your son. You have been to me the best father a fellow could wish. I want to thank you for the gift of a clean and strong and vigorous healthy body, straight limbs and thews that could serve England at her need. For the gift of a powerful intellect and a discerning mind—thank you. For the long years of self-denial that made my education possible; for the guidance and teaching that kept me straight in the days of youth; for the counsel and help ever freely proffered when I asked; for all noble things in your example—again and most earnestly, thank you.

"Secondly, as to my death. Inasmuch as we be men together, there is little need for words. It is in a good cause that I lay down my life. All the things that I hold dear in life I willingly give up since it is required of me. I am proud and glad to lie one of those whom England takes, who in their bodies pay the price of her honor. And though in your heart there will be sorrow, you will also be proud; and you will not grieve overmuch.

"All good things be unto you! May the coming years bring wider field of service, honor, and honorable work, strength and wisdom to perform it; and in the end peace and contentment and quiet rest! Your son, a soldier of England, salutes you. Farewell!"

THE OPEN WINDOW HABIT.

Lessens Danger of Tuberculosis and Increases Efficiency.

One of the most useful habits to cultivate is that of sleeping with your windows open. Undoubtedly a great deal of sickness, low energy and tired feeling is due to sleeping with closed windows. Not only is the danger of tuberculosis much lessened by sleeping with your windows wide open, but your efficiency will be largely increased and you will feel like another person if you get fresh air while you sleep.

Most people keep their windows open at night in the summer time, but begin to close them as soon as the weather turns chilly. This is where they make a mistake. It is at this point where one can easily contract the open window habit By adding bed covers on the cold nights, in a few weeks one will find that the coldest nights do not mean discomfort. It is then easy to continue with open windows through the winter.

Quick Promotion.

For an hour the American consul in a Mexican town had been sitting in the hotel dining room. At last the proprietor came to him.

"Pardon, sir," he said, with a low bow, "were you waiting for anything?"

"Yes," replied the consul. "Yesterday I told Ferdinand, your head waiter, that I would dine here at six o'clock. It is seven o'clock, and he hasn't appeared yet."

"Ferdinand joined the army early to-day," said the proprietor. "If the senor —"

"Gone, has he? The scoundrel! Why didn't he let me know he was going?"

"More respect, please, senor," protested the Mexican, with dignity. "Ferdinand has won steady promotion and is now a general."

WAR BRINGS NEW STAMPS

UNUSUAL POSTMARKS HAVE A NEW IMPORTANCE.

War Stamp Collectors Can Read a History of the Conflict in the Pages of Their Albums

One change that has resulted from the world war but has been noticed by few persons except philatelists is in the postage stamps issued in countries which wholly or in part have changed Governments. The postmark, which generally in normal times is not so important to collectors as stamps, is now sought assiduously, especially if it comes from a district that has been in the hands of each side several times.

Of course a foreign army in occupation of a city or territory has nothing to distinguish its stamps from those it generally uses, and in such cases it is the postmark that gives value to the stamp for the collector's purposes.

Canadian postmarks at present appeal to the patriotic citizens of the Dominion to aid the Government by subscribing to the war loan. Many post offices in the United States stamped letters in a similar way during the first Liberty Loan campaign.

Many New Stamps.

Russia's new stamps contain the Slavonic inscription: "Liberty-Equality-Fraternity." The number issued so far has not been large, as Kerensky and his followers have been too busy with more important matters. As a makeshift the Russian authorities have overprinted the old Romanoff stamps with a device representing a Phrygian or Liberty cap, with crossed swords in addition to the legend that appears on the latest issue.

Finland's new stamps contain an old time armorial design of a lion trampling on a sabre. Besides "Finland" they have on them the native name of the country, "Suomi."

Poland has a new stamp, but it is "Made in Germany."

Quick changes which have taken place in China have afforded a rich field for those interested in philately, although it has not been easy to get hold of the stamp issues. In the recent brief return to the throne of Emperor Hsuan Tung it is said that the stamps of the republic were overprinted with an imperial emblem or inscription. As the young man held his place for only a week the overprinted stamps should be valuable.

War stamp collectors with their stamps and postmarks can read off a history of the war by glancing through the pages of their albums. They are constantly on the alert to add to their stores, as can be testified to by importers, exporters, army and navy officers and employees of steamship lines, who are importuned by diligent philatelists desiring to "go through the waste baskets." War stamp collecting has also opened a new source of revenue to janitors in office buildings, who look out for stamps and sell them.

The Sandbag Caves of Venice.

In other cities, when aerial bombardments take place, the citizens run for safety into underground cellars and store-places. But, as is well known, Venice has no cellars, nor underground places. Around the houses there is water. One can hardly dig a few feet below the surface anywhere without coming to water. For this reason the ground floors of the houses are made of cement so as to be impermeable to water; but should any flaw or crack appear in them the water soon discovers it and comes bubbling up through it. Venice thus lacking underground cellars, a substitute had to be found for them. Fortunately, it possesses many strongly arched passages, and in these the authorities have provided what are called loghi di rifudio (places of refuge). They are built of wood and sandbags. They have been constructed in every quarter of city, signboards on every corner point out the way to them. And so, when the watchmen sound the alarm on their trumpets the people like those of old, flying from the avenger of blood, can run into these refuges and be safe.

For dumplings, cook small tea biscuits in the oven. Before serving put these on the platter, and pour the stew over them.

Eating for Health and Strength calls for intelligent food selection. It is easy to keep in top-notch vigor of mind and body at low cost if you know **Shredded Wheat Biscuit.** It is 100 per cent. whole wheat—nothing wasted, nothing thrown away — contains more real body-building nutriment than meat, eggs or potatoes and costs much less. Full of nutriment, tasty and toothsome. Most people like the nutty aroma of the baked wheat, especially when served with hot milk. Delicious with sliced peaches, bananas and other fresh fruits.

Made in Canada.

FIRE WITHOUT MATCHES

Methods of Obtaining Fire Are Common Among Various Races

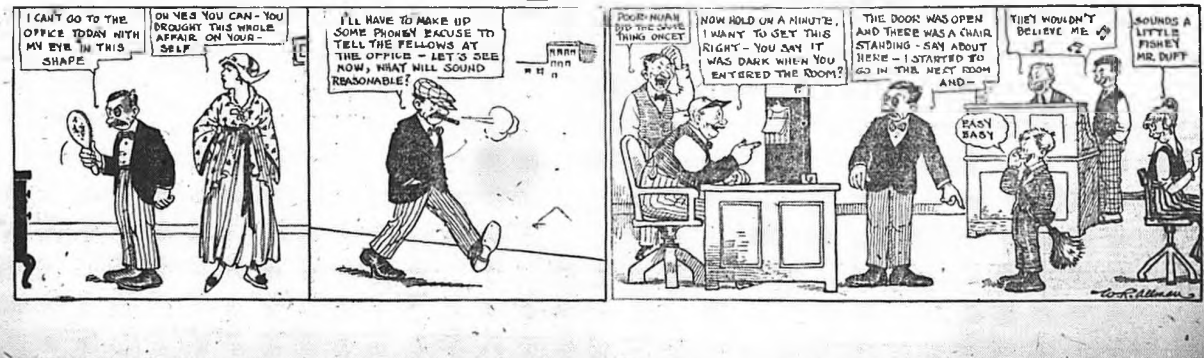
The native Malay method of making fire is by rubbing two sticks together. The Malays use for the purpose two pieces of bamboo. One is a hollowed convex strip laid flat side down; the other is sharpened to a knife edge. The sharpe edge is sawed rapidly across the convex strip until the later is penetrated through, and the du t that falls beneath, rendered incandescent by friction, ignites a bit of tinder.

Bamboo is naturally adapted for the purpose because its flinty coat favors the development of high heat, while its marrowy pith when dry is very inflammable. There is, of course, no bamboo in France; but equally satisfactory methods of making fires without matches are known to-day to a great many Boy Scouts, who practice them on camping trips, and soldiers and sailors are now being taught to use them.

One of these methods involves the use of a bow drill, a simple contrivance that dates back to remote prehistoric times. By this means one end of a stick is made to revolve with great rapidity in a hole in a piece of wood. With a little good tinder ready, only two or three minutes are required to accomplish ignition.

The bow drill is in common use by the Eskimo in making fire. Another method, of Polynesian origin, is that of the "plowing stick." The operator rubs a groove in a piece of soft wood with the end of a stick of hard wood. The stick wears off particles of the soft wood and pushes them along in a head at the end of the groove. By accelerating the movement the tiny heap is brought to the point of ignition.

Until recent years the accomplishment of making fire by rubbing two sticks together was deemed beyond attainment by civilized people. But why? Nobody could say, but skill in the art was supposed to be obtainable exclusively by savages. This idea has been exploded.



The civilized Canadian can make fire in this way just as well as any savage. All he needs is a little teaching, as many a Boy Scout can testify. Doubtless some day he will learn how to use the "fire syringe," which may fairly be regarded as the last scientific of all aboriginal firemaking processes.

Its place of origin is the island of Borneo. The instrument is a cylinder of buffalo horn, with a sort of piston closely fitting. A scrap of tinder is placed in the mouth of the cylinder and a sharp, strong blow is struck upon the knob of the piston. Compressed air gives up heat under reduction of volume and thus the tinder catches fire.

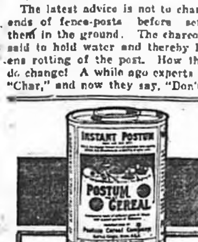
Planned War in 1909.

Germany's military preparation was known to the Russian War Ministry, and it also was aware that Germany contemplated a declaration of war in 1909, and again in 1913, according to testimony given by General Michelson, at the trial of General Soukhomlinoff, former minister of war, for high treason. The witness was the military attache of the Russian embassy in Berlin from 1906 to 1911. He swore that he had reported Germany's military activity to the Russian War Office.

The Doings of the Duffs.

STRONG PEOPLE NEEDED

The need for people to be healthy is urgent. Those whom illness has put outside the ranks of robust men and women feel their position keenly. They are handicapped in every walk of life and weak men and nerve-worn women need more earnestly than ever to put their health right and become active and strong. Many who began "patching" months ago are as ill now as on the day they began vainly tinkering with common drugs. Every ailing man and woman should remember that the ills of debility, nerve exhaustion, indigestion, sleeplessness, neuralgia, and depression come from a faulty blood supply. Worry, over-work or other causes have impoverished the blood and left the life-stream impure. The nerves thereby are starving and the whole system is languishing for new blood. In this condition many thousands have won back strong nerves and new health and strength through the new rich blood Dr. Williams Pink Pills actually makes. In a weak or bloodless condition it is not only a waste of time and money, but also a further menace to your health to tinker with common drugs. Follow the example of so many thousands by giving Dr. Williams' Pink Pills a fair trial, and they will transform you into healthy, active men and women.



You can get these pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

ALGOMA AND AN AUTHOR.

If an author can be said to be the product of any particular district—and why not, just as much as a variety of flower, or fruit, or grain?—Alan Sullivan, the distinguished Canadian poet and novelist, should be most properly identified with Algoma, that curiously shaped county of Ontario which stretches from the cities and settlements of the shores of Lake Huron and Lake Superior, up through the 2,900 square miles of the Mississauga Forest Reserve, to the great fur-trading territories three hundred and sixty miles north, where it is bounded by the Albany River, the chief tributary of James Bay. The southern shores of this county were colonized some thirty years ago at the instance of C.P.R. agents, by hardy pioneers from the older counties of Kincardine and Bruce, but the city of Sault Ste. Marie has its roots in the remoter past, as it was a trading post for the voyageurs, who travelled for the furtraders of Montreal into the far West. Alan Sullivan, whose father was Bishop of the Algoma Diocese, was at one time engineer of the work of construction and ballasting the Algoma branch of the C.P.R. between Sudbury and the Sault Ste. Marie, and uses the local color in several of his short stories. "It was fascinating," he says, "in those days to watch the psychological effect of the arrival of the track, or even of the survey party on the settlers. They brightened up, and looked at their farms with new eyes. They were in touch with the world that heretofore had seemed so distant." The bush fires, the miners, the hunters, the mail carriers, the Indian agents and the trappers have provided rich material for Alan Sullivan's stories, some of the best of which have been collected in the volume called "The Passing of Owl-I-Hut." More recently he has enlarged his field, and in his latest volume, "The Inner Door," he takes for atmosphere the labor movement in a small industrial town. But the town is still in Ontario, a fact that makes it all the more interesting to the Canadian reader, who takes an interest in the now rapid growth of a distinctive Canadian literature.

Peasant women are harvesting the crops in Italy.

The latest advice is not to char the ends of fence-posts before setting them in the ground. The charcoal is said to hold water and thereby hastens rotting of the post. How things do change! A while ago experts said, "Char," and now they say, "Don't."

THERE'S NO DOUBT ABOUT POSTUM AS A HEALTH IMPROVEMENT OVER TEA & COFFEE

"TACTICAL MINES."

Are Inefficient Instruments of Naval Warfare at the Present Time.

In the last great sea fight in the North Sea the retreating Germans threw overboard great numbers of so-called "tactical mines," in the hope that the British warships would hit them and be thereby demolished.

Nobody knows whether or not any damage to the British fleet was accomplished on that occasion by this means. But it is at least doubtful.

Vice-admiral William S. Sims, now in command of the American naval forces in European waters, declares that the menace of tactical mines in a sea battle is not regarded very seriously. If squarely bumped, such a mine will blow up a ship, but ordinarily the "bow wave" of a warship will throw the mine aside and out of the vessel's path.

Many experiments in the use of such mines have been made by the United States naval experts. They have been attached in pairs by a line 200 or 300 feet long, but the line sank, bringing the two mines together, so that they were no better than one.

Corks were put along the line to hold it up; but, even so, the cutwater of a ship, bearing a thin sheet of steel with a razor edge, would bite it in twain. A steel line suitably buoyed by floats has been tried, but even that is liable to be cut, for it cannot be very thick.

Thus the tactical mine remains to this day an inefficient instrument of naval warfare. It represents an unsolved problem.

WOULD NOT BE WITHOUT BABY'S OWN TABLETS

Mrs. A. C. Smith, Goodwood, Ont., writes:—"I have used Baby's Own Tablets for the past two years and have found them the best medicine a mother can give her little ones and I would not be without them." The Tablets never fail to banish the simple ailments of childhood. They regulate the bowels; sweeten the stomach and make the cross sickly baby bright, healthy and happy. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

BELGIAN MILLS STRIPPED.

Invaders Send Machinery to Germany Or Wreck It.

Official dispatches confirm the reports recently brought from Belgium and northern France that the Germans are stripping textile mills of their machinery, destroying it or sending it to Germany. Actual removal of machinery has been reported from Roubaix, Tourcoing and near Courtrai, and the purpose of the conquerors to carry out this policy throughout Flanders is forecast by an order to all mills to furnish inventories of their equipment.

In some quarters these reports have been interpreted as a possible sign of an approaching evacuation of a large section of Belgian territory. It is pointed out, however, that reports from the same sources tell of the importation of children from ten to fifteen years of age from Germany for office work, and apparently discredit the evacuation theory.

Requisitioning by the Germans of wine, textile fabrics in retail stores and blankets in private houses is described in the dispatches.

MURINE FOR YOUR EYES **Granulated Eyelids,** Sore Eyes, Eyes Inflamed by Sun, Dust and Wind quickly relieved by Murine. Try it in your Eyes and in Baby's Eyes. No Smarting, Just Eye Comfort

Murine Eye Remedy At Your Druggist's or by mail 50c per bottle. Murine Eye Salve, in Tubes 25c. For Book of the Eye—Free. Ask Murine Eye Remedy Co., Chicago

To stop the creaking of a door apply a little soap to the hinge. This is as effective as oil, and the soap does not spoil the appearance of the paint.

Minard's Liniment Relieves Neuralgia.

Palaces Going Begging.

Would you care to purchase a castle, drawbridge and ghost inclusive, for the small sum of two thousand pounds? This was the market value of Henry VIII.'s famous residence at Kingsbury, which recently came under the hammer, and which is now the property of a local dealer.

Many palaces have figured recently in the property sales, and some have been acquired at an absurdly low figure. The owner of four houses in Suburbia may reckon his possessions as equalling in monetary value an ancient seat of the mighty.

Fringed by the banks of the River Thames stands Linsey Palace, in Cheyne Walk—not of large dimensions, but notable as the home of both Stuart and Hanoverian rulers. A current advertisement tells us that "this delightful residence may be acquired by an immediate purchaser at a very reasonable figure."

Turn the garden over with a spade or plough this autumn and, if it is to be had, cover the soil with manure a foot deep before turning it under. Repeat the operation next spring and see what a garden will result. Dig deep in spading. There is a way to get down two feet with the proper determination and effort. If manure is not applied this autumn apply lime liberally, air slaked or hydrated, and turn it under and apply the manure in the spring. Lime and leaves can be worked in together this autumn.

YES! MAGICALLY! CORNS LIFT OUT WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

What She Wanted.

An old dame who had never budged from her native village in her life before was travelling to London to see her wounded son. It was a long journey, and she began to be very hungry. She had heard that it was possible to get tea on express trains; but no attendant passed along the corridor. Then a bright thought struck her. One should ring for a servant, of course. She reached up and pulled the communication-cord. There was a screech of brakes, and presently the guard came rushing along.

"Who pulled that bell?" he shouted.

"I did!" said the old lady, sweetly.

"Well, what do you want?" asked the guard.

"A cup of tea and a ham-sandwich for me, please!" said the dame.

Minard's Liniment Co., Limited

Dear Sirs,—I can recommend MINARD'S LINIMENT for Rheumatism and Sprains, as I have used it for both with excellent results.

Yours truly,
T. B. LAVERS,
St. John.

When you have an invalid to care for, baste ten or a dozen sheets of old newspapers together, cover with a layer of old cotton cloth, and you will have a mattress protector, easily destroyed if necessary.

Men in Training

Fighting isn't the only duty of a soldier, and exposure to bullets is not as serious as exposure to all kinds of weather and dampness.

Rheumatic aches, sore and stiff muscles, strains and sprains, chilblains and neuralgia, all are enemies of the soldier, and the relief for all these pains and aches is Sloan's Liniment. Clean and convenient to carry or use; does not stain, and penetrates without rubbing.

Generous sized bottles, at all druggists, 25c., 50c., $1.00.

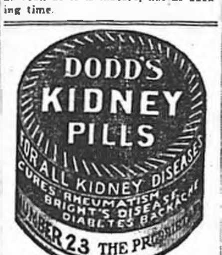
Sloan's Liniment
KILLS PAIN

PAINS SHARP AND STABBING

Woman Thought She Would Die. Cured by Lydia E. Pinkham's Vegetable Compound.

Ogdensburg, Wis.—"I suffered from female troubles which caused piercing pains like a knife through my back and side. I finally lost all my strength so I had to go to bed. The doctor advised an operation but I would not listen to it. I thought of what I had read about Lydia E. Pinkham's Vegetable Compound and tried it. The first bottle brought great relief and six bottles have entirely cured me. All women who have female trouble of any kind should try Lydia E. Pinkham's Vegetable Compound."—Mrs. Etta Dorion, Ogdensburg, Wis.

Physicians undoubtedly did their best, battled with this case steadily and could do no more, but often the most scientific treatment is surpassed by the medicinal properties of the good old fashioned roots and herbs contained in Lydia E. Pinkham's Vegetable Compound.



If any complication exists it pays to write the Lydia E. Pinkham Medicine Co., Lynn, Mass., for special free advice.

Blackbirds Saved the Crop.

A few days ago, Grant Mitchell, living near Windfall, Indiana, gave up for lost a ten-acre field of tomatoes, says the Indianapolis News. In one last effort to save at least a part of the crop, Mr. Mitchell and two or three farm employees went to the field one morning to destroy as many worms as possible, but they found that every worm had disappeared. A neighbor told Mr. Mitchell the field had been alive with blackbirds the afternoon before. Similar stories are reported by other farmers of the county.

Minard's Liniment Cures Dandruff.

Seed ears from the best producing stalks in the field produce more than seed ears apparently as good, but gathered without considering the productiveness of the parent stalk. The place to select seed corn is in the field, not in the crib; the time to select it is as soon as it is mature, not at husking time.

CUTICURA HEALED VERY ITCHY SCALP

Burning Kept Her Awake Nights. Hard Lumps Came Then Turned to Scales.

"My scalp began by being very itchy and burning which would keep me awake nights it was so bothersome. First there would come little hard lumps and when I scratched them they would turn to flaky scales and dry.

"I got no relief until I got Cuticura Soap and Ointment. They gave instant relief and in a week I was completely healed." (Signed) Mrs. Alfred Berthelotte, Ed River Crossing, N. B., February 11, '16.

Most skin troubles might be prevented by using Cuticura Soap and Ointment for every-day toilet purposes.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

ROYAL YEAST

Has been Canada's favorite yeast for over a quarter of a century. Bread baked with Royal Yeast will keep fresh and moist longer than that made with any other, so that a full week's supply can easily be made at one baking, and the last loaf will be just as good as the first.

MADE IN CANADA

E.W. GILLETT COMPANY LIMITED
WINNIPEG TORONTO, ONT. MONTREAL

I think that every mother's son
And every father's daughter
Should drink, at least till twenty-one,
Just nothing but cold water.
And after that they might drink tea,
But nothing any stronger.
If all folks would agree with me,
They'd live a great deal longer.

NUXATED IRON

The Power behind the Strong Vigorous Iron Men of Today

Dr. Ferdinand King, a New York City Physician and Medical Author says: "There can be no strong, vigorous, iron men nor beautiful, healthy, rosy-cheeked women without iron—Nuxated Iron taken three times per day after meals will increase the strength and endurance of weak, nervous, run-down folks 100 per cent. in two weeks' time in many instances. Avoid the old forms of metallic iron which may injure the teeth, corrode the stomach, and thereby do more harm than good. Take only organic iron—Nuxated Iron." It is dispensed by all good druggists.

Dr. Beck, The Well Known Eye Specialist and Doctor Judkins, The Medical Author, Publish Astonishing Report on Wonderful Remedy To Strengthen Eyesight

Say it Strengthens Eyesight 50% in One Week's Time in Many Instances

DR. BECK

A Free Prescription You Can Have Filled and Use at Home.

New York.—Dr. Beck, a New York state eye specialist, and Dr. Judkins, a Massachusetts physician, were asked to make a thorough test of the popular eye remedy, Bon Opto. Their reports are [illegible]. Here they are:

WEST BRUCE TEACHERS' ASSOCIATION

Probably the most successful convention West Bruce teachers in years was held the assembly hall of Paisley public hool on Oct 11th and 12th. Of the one ndred and nineteen teachers in the inscterate, ninety-five were present for the session. The President, Mrs rchell, occupied the chair. In addition excellent papers from members of the sociation, the executive committee succeeded in securing Professor Jones of the culty of Education, and Mrs Mayberry, t specialist of the London schools. Mrs apberry gave three excellent papers on fferent branches of her subject, and ese were greatly appreciated by the nvention, the members of which are ways pleased to receive such valuable lp and information, especially on a subct of such great interest to both teachrs and pupils.

The ministerial association of Paisley rtainly contributed their share in makg the convention a success, as one or ore of them attended all the sessions. d Rev M Neilson gave an excellent aper on sunny Italy. This paper was rmly received and a very hearty vote thanks was tendered Mr Neilson.

Professor Jones was the speaker of the vening at the town hall, where a very ne programme was enjoyed, not only by ie teachers, but many of the villagers as ell.

The programme for the convention was rried out as arranged, with the exception of the papers on Literature and Discipline, which were withdrawn to make oom for interesting addresses on Literature and History by Professor Jones.

Although not on the programme, the epresentative of the Dental Association f Toronto, Dr Coyne, was present and ave a short but most interesting address n the advantages of dental inspection in ur schools.

The programme was interspersed with usical selections and physical culture rills by pupils of Paisley public and continuation schools.

Reeve Steele's address of welcome at e beginning of the Thursday afternoon ession placed the teachers more at their ase, and made them feel that the village as really pleased to have them there.

At the close of the Friday afternoon ession the auditors' report was read and dopted, and the officers of the Associaion were elected as per the nominating ommittee's report as follows: President, r Gatis, principal of Southampton public school; Vice-president, Miss B Currie, ort Elgin public school; Secretary-treas, W Aylesworth, of Port Elgin public chool. An executive committee was also ected, consisting of Mrs Burchill, Misses oyle, Drummond, MacNiltz, Miller, and essrs J D Campbell and A C Douglas.

Mr J H McCauley, of S S No 4, Bruce, as elected as delegate to the O E A eeting in Toronto next Easter, but in ase Mr McCauley was unable to attend, nspector Bald was requested, on motion f Messrs Gatis and McAuley, to appoint substitute.

Inspector Bald was present throughout l the sessions, and he gave many useful ints and much valuable information whenever he thought necessary or whenever called on. The teachers, one and ll, showed their appreciation of his efforts make the convention a success.

On recommendation of the nominating ommittee, Southampton was chosen as ne next place of meeting.

On motion of Messrs Bald and Aylesorth a hearty vote of thanks was tendered l the Paisley school board and all others ho had helped to make the convention ch a decided success.

At 4.10 p m the last session of the Assoiation was closed by the national anthem nd prayer by Rev Mr Crighton.

—*Walkerton Philharmonic Society Concert, Town Hall, Paisley, Oct. 31.*

—Mr Silas Hanvy, 10th Bruce, had a very successful sale, auctioneer Pearce isposing of over $3,000 worth in less han three hours.

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take many. Office help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places and they need training.

NORTHERN Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Catalogue free on application.

C. A. FLEMING, F.C.A., Prin.

PERSONALS.

Ontario Women.

Chatham, Ont.—"Some time ago I had a general breakdown. It terminated in quite a bad case. Dr. Pierce's Favorite Prescription was recommended to me by a friend who used it and received much benefit. I began taking it and in one months I was completely cured of my ailment and have never had any return of same. I can recommend this medicine as being good, if one will give it a fair trial."—Miss. Josie Aubrey, 67 Edge St., Chatham, Ont.

At the first symptoms of any derangement at any period of life the one safe, sure, truthful remedy is Dr. Pierce's Favorite Prescription.

Thousands of women in Canada have taken it with unfailing success.

Dr. Pierce's Favorite Prescription is a boon and a blessing to women in times of trial, for headache, backache, hot flashes, general depression, dizziness, fainting spells, nervousness and exhaustion, women could never fail to take this tried and true woman's medicine.

Prepared from nature's roots and herbs, it contains no alcohol or narcotic, or any harmful ingredient. In either tablet or liquid form. Write Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., to-day for free medical advice.

Dr. Pierce's Pleasant Pellets not only are a *original* but the best *Little Liver Pills*, first put up over 40 years ago, by Dr. R. V. Pierce, have been much imitated but never equaled, as thousands attest. They're purely vegetable, being made up of concentrated and refined medicinal principles extracted from the roots of American plants. Do not gripe. One or two for a mild corrective, three or four for cathartic.

NOTED MUSICIAN OF MONTREAL

Advises The Use Of "FRUIT-A-TIVES", The Famous Fruit Medicine.

MR. ROSENBURG

589 Casgrain St., Montreal.
April 20th, 1915.

"In my opinion, no other medicine in the world is so curative *for Constipation and Indigestion* as "Fruit-a-tives". I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of Intestinal Paralysis—with *nasty Headaches*, belching gas, drowsiness after eating, and Pain in the Back. I tried pills and medicines of physicians, but nothing helped me. Then I was induced to try "Fruit-a-tives", and now for six months I have been entirely well.

I advise any one who suffers from that horrible trouble—Chronic Constipation with the resultant indigestion, *to try "Fruit-a-tives"*, and you will be agreeably surprised at the great benefit you will receive". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

GLAMIS

The Misses Kate and Bell McKinnon of Walkerton were guests of Miss Margaret McKinnon on the 10th of Kingsdales last week. They also visited friends in Glamis.

Mrs Madden, who has been a visitor at Mr Groves' for several weeks, returned to Detroit on Friday.

Mr Robert Jackson of Kincardine spent a few days on the 2nd of Bruce.

There was no preaching in the Baptist church on Sunday, the pastor being in Woodstock attending the convention.

Miss Akett of Narva spent over the week end with friends in our burg.

Mr Alex Kirkton was in Walkerton on Saturday delivering a team of horses he had sold.

Mrs Catherine McKinnon of the tenth spent a week with her daughters in Luckno.

The collectors on Trafalgar day for the British Red Cross were very much pleased with the amount received.

Your correspondent made a mistake in last week's item regarding the date of the Red Cross annual meeting. Instead of November the 1st, it is to be Nov 8th.

Mr Dick Kirkton, Mrs Kirkton and Pearl motored down to Markdale to visit friends.

The Women's Circle of the Baptist church purpose holding a thank offering meeting on Tuesday evening, Oct 30th, Rev Mr Holmes of Goderich will be the speaker.

UNDERWOOD

Rev Mr Hawke, of Tiverton, is conducting revival services here in the Methodist church. The meetings commenced last week and will be continued until the end of next week.

The contractors for gravelling the Goderich road are busy here now.

We are sorry to learn that Mr Wm McDonald's little girl Frances, who is ill, is not improving.

CARD OF THANKS

Mr R Westman desires to express his appreciation and gratitude for the kindness and sympathy extended to him in his recent bereavement.

Why Canada Needs More Money

UP to date the war has cost Canada about $700,000,000.

Canada has spent in Canada over $400,000,000 on her own account.

Canada has spent in Canada on behalf of Great Britain over $300,000,000.

What Canada spends for Great Britain is really loaned to Great Britain and will be repaid or credited to Canada later on.

Great Britain needs so much ready cash to finance her own expenditures at home for herself and for our Allies that she must buy on credit from Canada, and from every other country where she can get credit.

Of course Great Britain's credit is so good that other countries, in order to get her trade, are quite as willing to give her credit as we are in Canada.

Canada wants to help Great Britain not only because Canada wants Britain's trade but because we are Canada and she is Great Britain—both members of the same great Empire, kin of our kin, our motherland.

For Canada it is both a filial and patriotic duty to supply Great Britain's war needs and remember, her needs are our needs. Also it is in Canada's self-interest to supply those needs and thus keep open a market for our products.

* * *

Now, Britain needs our wheat, our cheese, cattle, hogs, and many manufactured articles.

Canada also needs many of these things—between the two it amounts to more than a million dollars a day in cash.

And the producers must be paid in cash.

Neither Canada nor Great Britain could go to a Canadian farmer and buy his wheat or his cattle on credit.

The farmer and all other producers might be ever so willing to give their country credit but they could not do it because they have to pay cash for wages, for rent, materials, etc. They must be paid in cash, or its equivalent.

So Canada says to Great Britain:—"I will lend you the money so that you can pay cash to Canada's producers for what you want.

"I will borrow this money from our own people just as you borrow money from your people.

"I will also borrow from the people of Canada money to pay cash for all the products that Canada, as well as Great Britain, needs in Canada."

That is Canada's practical, patriotic part in helping to win the war.

Without this credit the Canadian producer could not sell to Great Britain, and without these Canadian products the war would be prolonged.

So it is necessary for Canada to give to Great Britain the credit in order that Canada's own producers, who need a market, will have one; and in order that Great Britain which needs the products to win the war, will get them.

* * *

Now how does Canada get the money by which both Canada and Britain can pay cash for Canada's products?

By borrowing it from the people of Canada through the sale of Canada's Victory Bonds to be offered in November.

That is why Canada's Victory Bonds are offered to the people—to raise money to help to finish the war.

"Canada must keep her shoulder to the wheel even though it be a chariot of fire," and the way for Canada to keep her shoulder to the wheel is by buying

Canada's Victory Bonds

Next week this space will tell why Canada raises money by selling Canada's Victory Bonds

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.

Paisley Mercantile Co.

The People's Popular Store

Cold Weather Goods at Bargain Prices

For the cold wintry nights that are sure to come we have in our

Bedding Department

a big display of warm and cosy Comforters at $2.25 that are well worth today $3 50. Also Flannelette Blankets 11-4 size, reg price $2 00, our bargain price is now $1 69 We have also a good range of Wool Blankets at bargain prices, and as our selection in these lines is now complete, you ought to come and buy now and be prepared for the first cold snap.

Underwear

In Underwear we have a very large assortment. Notice our bargain prices. Men's Heavy Ribbed Wool Underwear, reg $1 for 69c per garment. A better quality, reg $1 for $1 49 a garment. Men's Fine Fleece-lined Shirt and Drawers, reg 75c for 59c garment. Men's Heavy Wool Sweaters, reg $2 for $1 49. Men's Heavy All Wool Khaki Socks, reg 75c for 63c.

Ladies' Coats

The balance of the newest styles at 25 per cent off our regular prices. A few broken sizes for $4 98 each.

Men's and Boys' Overcoats and Suits

A few sizes, Men's Overcoats, reg price $8 to $10, for $5 98. A few sizes in a better line for $3 49. We have snaps in Boys' Overcoats also. We have also a large assortment of Men's Suits at $5 49 up.

Ladies' and Children's Hose

We have a big range at less than cost of production.

Furs

Notice our values in Furs, the very latest styles at less than repeats can be had for.

Mens' Mitts

Men's Lined Leather Mitts, Wool Cuffs, for 49c pair. Men's Horsehide Palm, Wool Cuffs, for 89c pair. We are showing a large stock of

Boots, Shoes and Rubbers

of all kinds contracted for months ago and cannot be repeated at our prices. We have a full stock of

Groceries

bought as far ahead for future wants as possible.

We mention only a few lines in our large and well assorted stock. It has been our aim for some years past to contract ahead in order to protect against constant advance in prices. For this reason we require cash or produce at time of sale. Butter in 1-lb blocks or small rolls, fresh eggs and best dressed poultry demand very high prices, and we take them same as cash.

Millinery Stock

will be cleared at reduced prices. Come in best daylight. Examine goods. Too busy to answer phone.

Live Poultry Prices at Ballachey, Laidlaw & Co.'s

Old hens, 15 to 16c per lb; chickens 17c to 18c; ducks, 15c to 16c; geese, 11c to 12c; turkeys, 10 lbs and over 20c. Will take delivery any day at our store. All fowl must be brought in with crops empty or a deduction of ½ lb and upwards will be made from each bird. Also paying highest prices in cash or trade for dressed fowl. Fowl applies as cash at our big sale now on. Ballachey, Laidlaw & Co.

Not Necessary to be Medically Examined First

While it is imperative that every young man between 20 34 years of age should observe the provisions of the new Military Act, there is much confusion as to what step should first be taken. Here it is in brief: Apply to the local postmaster for service papers or exemption papers, which ever you desire, fill them in and give them to the postmaster, getting his receipt therefor. He will forward them to the proper authorities, who will later advise you where you are to go for examination. A Medical Board will sit at Walkerton on Monday, Tuesday and Wednesday, the 5th, 6th and 7th of November, for the purpose of examining all men who may present themselves.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

"The Hardware Store of Better Values"

CUSTOM TAILORING is More Important than ever this Season

Custom Tailoring is your only assurance of clothes satisfaction. It is your only guarantee of getting all wool fabrics, high quality workmanship, correct style and absolute perfect fit.

The ready-to-wear market is in an unsettled condition—many poor fabrics are being used, poor workmanship is employed, and you get no guarantee of satisfaction.

Play safe. Buy good clothes—smart, individual refined clothes—in short, buy our custom tailored Fall Suits and Overcoats at $18 to $35.

To the Ladies:

Our Ladies' Tailoring trade has now developed to such an extent that we have a larger number of orders than at any time in the past, and we are in a position to produce the new designs in styles most satisfactory to patrons.

Store Buildings Sold

Mr J S Nicholls has bought three of the Flood block stores, next the Hanna House and is having them repaired and improved, after which he will remove his place of business to there from across the street.

The AUTOMOBILE

Helpful Hints to Motorists.

Makes Pumping Tires Easier.

To make tire pumping easier, a board can be nailed at an angle, between the floor and the side wall of the garage. This angle makes it much easier to pump the tire, and, as the board raises the pump, one does not have to bend over so far.

A couple of metal straps are placed over the foot plates of the pump, so that one does not have to hold down the pump, when pulling up on the handle. This also makes pumping easier, as one does not have to maintain one position so rigidly.

If the pump is fastened near the doorway of the garage, any wheel of the car can be brought near the pump by simply moving the car. Every car owner should have two tire pumps, one to be kept wrapped up and always in the car, and the other to be used in the garage.

Replacing Transmission Cover

To keep the gaskets in position—while the transmission cover is being replaced—is not easy, because it is often necessary to shift the cover around in order to get the pedals to engage the lugs on the ends of the transmission bar.

But if twelve round wooden sticks or metal bars from one-fourth to three-eighths inch diameter are placed on end, on a wooden box or on a board supported by trestles, so that each rod projects about two inches through a bolt hole in the lower part of the transmission case, then the felt gaskets can be placed over these rods, with the assurance that the gaskets will be held in place while the cover is being put on.

After the cover has been replaced a rod is pulled out and a bolt inserted, this procedure being used for each bolt.

Repairs for Top Bows

It is often necessary to repair a top bow which has been broken by accident. This can easily be done by drilling a hole in the center of the broken parts and inserting a piece of iron pipe flattened to fit the hole. This should extend three or four inches beyond the end of the part, so that it can be fitted into the hole in the other part. This method of repairing makes the bow as strong or stronger than when new.

Stops Rattle of Straps

The metal hooks holding the front end of the top to the windshield are apt to rattle—unless kept so tight that they are hard to attach—whenever the car is driven over rough roads.

But light, coil springs, such as can be purchased at the 5-and-10 cent stores, can be cut slightly shorter than the straps and fastened with copper wire to the top and the end of the buckle and hook. These springs furnish sufficient tension to keep the top tight at all times.

WOMEN COOKS IN ARMY

Soldiers Suffered Severely From Indigestible Meals Before Innovation.

One of the revolutions which the war has wrought in the British army has been the admission of women cooks to the camp kitchens everywhere except in the fighting lines.

One of the great troubles of the Kitchener armies in the early days of the war was the inefficiency of the cooking arrangements. Under the old regulations cooks had to be drawn from each unit, but, owing to the inexperience of most of the citizen soldiers in this art, the food in most units, although plentiful and good, was badly cooked and badly served and the kitchen frequently dirty and slovenly. In consequence, at a time when young soldiers especially needed appetizing food to strengthen them in their unwonted labors, many suffered severely from the monotonous and indigestible meals put before them. Moreover, there was a great deal of waste.

The first women cooks in the British army were employed in August, 1915, at a convalescent camp, and six months later the formal recruiting of women for this work was initiated. To-day there are more than 6000 cooks and waitresses in 200 camps in England alone. Women have also taken over the kitchen service in all the Canadian and Australian hospitals, and women instructors are being employed in the regular army schools of cookery. One woman who enrolled as a cook two years ago and who is only twenty-two years old has risen to the rank of superintendent and is responsible for the whole service in a camp of 22,000 men.

The economy resulting from the employment of women cooks has been very marked. In one large officers' camp the daily messing charge was reduced within a few weeks from sixty-five cents a day to thirty-one cents, and, in addition, a fund of $500 was saved for miscellaneous camp purposes. The rate at this camp is now reduced to eighteen cents a day.

Common salt and water make a capital gargle for a sore throat.

So successful have been Italian experiments with reforestation in Tripoli that 50,000 more eucalyptus trees will be set out this year.

Greenland's interior is estimated to be covered by a shield-shaped cap of snow and ice not less than 6,000 feet or one mile in thickness.

But when they strike the surface of the earth, their energy is transformed into heat, by which the ground is warmed. Air is warmed by contact with the warm ground; and the warming of the lower air gives rise to air currents that distribute the heat through the atmosphere.

A MOTHER IN ENGLAND.

Yes, here we all beside the fire,
The sleek brown head against my knee,
The soft brown eyes that seem to dream
Of our dear lad across the sea.
For memory stirs us both to-night
The while we watch the hearthfire's light.

We two alone—his mother, yes,
And tried and true through many years,
His faithful dog—we two alone,
With memories and hopes and fears.
Outside, the soft rain dripping slow,
Inside, the firelight's rosy glow.

"Somewhere in France"—somewhere to-night,
In trench or field or, it may be,
Upon a cot where lights burn dim
And forms are lying patiently.

And so we wait—his dog and I—
And long and listen. Oh, if he
Could run in nobily and cry
His boyish greeting joyously
As he was wont! The firelights dance:
My boy, my boy! "Somewhere in France!"

—Harriet Crocker LeRoy.

How To Proceed If Car Balks.

Above all, remove nothing from the engine except as directed in test rules.

1. Gasoline—Is tank full? Are pipes clean. Is carburetor clean? If carburetor needs adjusting do it, otherwise leave it alone. Does manifold leak?

2. Compression—To test: Open all petcocks except the one on cylinder to be tested; crank engine, noticing how strong the compression is in each cylinder.

3. Ignition—A. Test for a spark by taking wire off of any plug; hold wire about one-eighth of an inch from plug; crank engine with switch on. Spark should jump to plug.

B. Are the batteries run down? Does the vibrator (if any) buzz? Is the timer clean? Do timer points make good contact?

C. Are any wires loose, burned, wet, broken or short-circuited? Are spark plugs clean and the points 1-50 of an inch apart?

D. Does magneto armature revolve? Is safety spark gap Are interrupter points clean adjusted right? Do all brushes make good contact? Is distributor clean? Is distributor rotor loose or making poor contact?

E. Check magneto wires as per "C."

Note—Loose wires and terminals and neglected batteries, also dirty gasoline, cause much trouble.

Note—To keep a gas engine running, cooling and lubrication are needed.

A DOG'S AMBUSCADE.

How He Outwitted the Coyote With the Aid of an Ally.

In an account of the sagacity of his dog, Scotch, Mr. Enos A. Mills tells his readers in his book Wild Life in the Rockies that the dog objected to the coyotes that lived on a rocky slope near the author's cabin. Into the tangled forest of pines the coyotes always retreated when Scotch gave chase, and into this retreat he dared not pursue them. So long as the coyotes sunned themselves, kept quiet and played, Scotch merely watched them contentedly from afar; but the instant they began to howl and yelp, he raced over and chased them into the woods.

One day, when Scotch was busy driving the pack into the woods, a coyote that trotted lame with the right foreleg emerged from a rocky crag at the edge of the open, ran to the rear of Scotch and set up a chorus of yells and howls, to the great annoyance of the collie, who at once raced back and chased the noisy taunter into the woods. But Scotch no sooner turned to the rear of the pack than the cunning coyote came out again and defied him. Once more Scotch had to chase the coyote into the pines, and a few moments later he had to repeat the manoeuvre. He came back from this chase panting and tired and obviously worried.

The incident seemed to prey upon him to such an extent, says Mr. Mills, that I became a little anxious about him. One day when I went for the mail, I allowed Scotch to go with me. At the post office he paid little attention to the dogs that, with their masters, were assembled there, and held himself aloof from them, squatting on the ground with head erect and almost an air of contempt for them; but it was evident that he was watching their every move. When I started homeward he showed great satisfaction by leaping and barking.

That night was wild and stormy, and I concluded to go out and enjoy the storm on some wind-swept crags. Scotch did not appear when I called him; and so I went alone. Not until the next morning did the dog come home, and then he was accompanied by a collie that belonged to a rancher who lived about fifteen miles away. I remembered seeing the dog at the post office the day before.

In the afternoon I heard the varied voices of the coyote pack and went out with my glass to watch proceedings, wondering what part the visiting collie would play.

There went Scotch, as I supposed, racing for the yelping pack, but the visiting collie was not to be seen. The pack beat the usual retreat, and while the dog that I supposed to be Scotch was chasing them into the woods out came the limping coyote, hurrying toward the willow clump from behind which he was accustomed to yelp triumphantly in Scotch's rear.

The lame coyote came round the willow clump as usual and threw up his head as if to howl. Then the unexpected happened. On the instant a collie that I now recognized as Scotch leaped out of the willow clump and came down upon the coyote's back. They rolled about for some time before the coyote shook himself free and started for the woods, only to be grabbed again by the visiting collie. For a time both dogs fought the coyote fiercely; but he at last tore himself free and escaped into the pines, badly wounded and bleeding. I never saw him again. That night the visiting collie went home. As Scotch was missing for a time, I think he may have accompanied his ally at least a part of the way.

"ANOTHER REAPETH."

When Autumn stands,
By a heaped-up wain
Let her think of the hands
That scattered the grain.

Had Spring not sown
The living wheat,
Then nought had grown
For man to eat.

And you whose lot
It is to number
Life's sheaves, forget not
Those who slumber—

Who toiled and planted,
Then—fell asleep;
To you 'tis granted
The harvest to reap.

—Alexander Louis Fraser.

PROBLEM OF RETURNED SOLDIER

WITH TRADE TRAINING HERO HOBOES ARE UNKNOWN.

M.H.C. Trade Schools Are Canada's Safeguard, Says Authority On Sociology.

Hoboes are made not born. The alarmist who declares that a threat of vagrancy lies deep in every man, and sees the war turning back into Canada streams of veterans who will never settle down again into the industrial scheme of life is absolutely unsupported by the findings of sociological research, according to Dr. Franklin Johnson, the director of the Department of Social Service in the University of Toronto, and one of the foremost authorities in his line in Canada.

"Lack of vocational training," declared Dr. Johnson, "was the chief contributing factor in the scourge of vagrancy which claimed 50,000 men in Canada before the war began, and the action of the government through the Military Hospitals Commission in offering vocational training to every man who returns incapacitated for his former livelihood, is not only a safeguard against new recruits being made by that army of shirkers, but boon to all of Canada.

Product of Competition.

"No man wants to be a bum. They are made chiefly through the grind of competition upon the mass of unskilled laborers. Once a man finds his place in life there's a certain adhesiveness in association which holds him in his place.

"Giving the returned man a chance to learn trades, and allowing them to make their own choice, as the Commission is doing, will not only benefit the man and his family but the whole Dominion.

Trade Develops Responsibility.

"The man who is merely a filler in the industrial scheme, with no special part to play rarely develops a sense of responsibility. Give him a trade in which he can become adept and feel his work is of importance, and he becomes not only interested but a responsible member of society."

The Military Hospitals Commission in training every returned man, who by reason of his disabilities is unable to resume his former occupation, for a new trade which he is allowed to choose. Experts who know his physical limitations, his abilities and the labor market guide him in his decision, and thus he is insured against learning a trade in which he might not be able to continue long, or one for which there is insufficient demand.

M.H.C. Records.

The records show that many men who were laborers, teamsters, well-diggers, unskilled helpers in factories, etc., have been so trained during their convalescence as to go back into civilian life as skilled mechanics, office men and artisans.

Illiterate men have learned to read and write; and scores have been returned to industrial life to earn salaries larger than they ever enjoyed before.

Springs Not Always Safe.

Don't assume that any spring is sure. That is one of the greatest mistakes you can make. If the spring is welling out from deep sandy soil, the probability is that it is safe, but if it is coming out of a rock or near the surface, it is probably not. Drink by preference out of the open lake, where the dangerous germs which may be present will be well scattered, and where you are not likely to get such a large number of them if they are present.

Instead of waiting until Johnny's trousers are worn out at the knees, baste a square underneath while new. The knee will then wear as long as any part.

Oh, Adam was a gardener, and God who made him sees
That half a proper gardener's work is done upon his knees;
So when your work is finished, you can wash your hands and pray
For the Glory of the Garden that it may not pass away!
And the Glory of the Garden it shall never pass away. —Kipling.

PLAYING FOR THE "POILUS."

Groups of Actors and Singers Cheer Wearied Fighters in France.

Scenes from Shakespeare have been successfully played by British soldiers, but the most notable performances at the front have not been by amateurs. Mrs. Maud Radford Warren recently enjoyed the opportunity of travelling with a little group of French actors and singers who—like many others—were giving their services to cheer the wearied fighters just behind the fighting line, whose need for diversion and relaxation is well understood. Their entertainment, although in part patriotic or sentimental, was far the most part gay; but in the players there was a spirit of passionate patriotism and devotion behind the comedy. Here is the description of a typical performance, given in a barn, which the soldiers had cleared out and provided as best they could with improvised stage, and burlap curtains that two "poilus" stood ready to pull apart.

As we crossed the muddy floor, says the author, a little string orchestra of "poilus" began to play. While the performers went behind the dressing curtain I stayed and applauded the musicians. At the end of their piece, when I told them how good their work was, the leader said:

"Ah, madame should have heard us before the attack at Verdun! We had some members then; but half of us were lost in that first half hour."

When the orchestra began to play again and the officers entered, I went behind the curtain. Mme. Dusband was backed against the wall with her lips moving and her beautiful eyes somewhat glazed.

"If I didn't know better," I began, "I should think—"

"Ah, but I am nervous," she said. "It's not the ordinary stage fright, but something deeper, something nearer my heart. . . . Do you know, madame, that the greatest artists in France, or the most indifferent, tremble like novices before the soldiers, although they are always so responsive, so devoted—"

Her voice broke and she could not finish.

The narrator, too, a little later, grew teary as in the ducky space of the great barn the peered out from behind the curtains on the blue-gray mass of uniforms and those patient, brave, stunding men, who had been through such horrors, and who were waiting so gratefully for the artists who were going to bring them a little gayety!

"Ah, madame," said M. Boyer at my elbow, "do not drive the tears back. They are worthy of it, these soldiers of France. In our hearts, all of us artists weep whenever we play for them."

In the same spirit, although with more fire, the singer, Mme. Ninq Blay, a Frenchwoman from New Orleans, flashed out indignantly when she learned that the crabbed caretaker of a provincial town hall had scolded a soldier audience for tracking mud over the floors.

"Track mud over your floors!" cried the sweet-voiced, gentle, blue-eyed blonde lady, with crushing indignation. "They could track mud over my heart if they wanted to!"

WHY IS LEAD SHOT ROUND?

Not Because They Drop From a Height, As Generally Believed.

Why are lead shot made by dropping the molten metal from the top of a tall tower?

The popular supposition is that they acquire the requisite spherical shape by falling from a great height. But it isn't so. The leaden globules are as perfectly spherical when they start from the tower-top as when they strike the water in a well at the bottom.

Plain molten lead will not make good shot. An admixture of arsenic causes it to form globules properly spherical. The stuff is held in a big iron saucepan with a perforated bottom (at the top of the tower), and the metal drops falling through are the shot.

In falling they cool, hardening sufficiently to suffer no deformation on striking the water 200 feet below. This, indeed, is the reason why of the tower—to give the leaden globules time to cool while passing through the air. The use of the water in the well is to furnish a soft cushion for the shot to fall upon.

Later on, the shot are scooped out of the well and put through a series of sieves, to sort them into sizes.

From Erin's Green Isle

NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irishmen.

Large quantities of hay have been destroyed along the banks of the Shannon River owing to the abnormal height of the water.

For gallantry and the securing of valuable information, Lieut. C. E. Plowman, an Athy man, has been awarded the Military Cross.

A young Cahir soldier named Maloney helped to save the life of an English officer by allowing some of his blood to be infused into the other's veins.

Word has been received from the front that Lieut. N. Aliwyn-Smyth, Inniskillings, nephew of the Protestant Primate of Ireland, has been wounded a second time.

Martin Downes, Dublin Fusiliers, and formerly well-known in Ireland as a footballer, has succumbed to wounds received in action at the front.

For stealing a wrench from a harvesting machine at Wexford Station, James Spencer was sentenced to one month's imprisonment.

P. Hession, Armagh House, Ballymacward, has purchased a farm of 150 Irish acres at Ballydonelan, near Loughrea, for £1210.

Patrick Mulldowney, Marysborough, has been elected secretary of the Queen's County Insurance Society.

A Jew, named Sidney Rostin, was fined £2 for selling matches at the Tipperary Agricultural Show without a license.

The Athlone Guardians have provided a young man with an artificial leg to enable him to continue his employment.

The New Ross Urban Council have reduced the cost of lighting the town by dispensing with twenty-three of the public lamps.

Chairman Heegan of the Public Health and Dwellings Committee of Cork Corporation, says that the housing conditions of the poor in Cork were deplorable.

Private William Rutledge, Royal Irish Fusiliers, a native of Manorhamilton, and who recently was awarded the Military Medal, has been killed in action.

Owing to the demand for Shannon River fresh water fish in England, the price in the local market is six times greater than formerly.

Michael Hunt, Millstone, Castleres, has been officially notified of the death, in action, of his son, Private Michael Hunt, Irish Guards.

Private Patrick Curtin, R.A.M.C., Midleton, has been awarded the Military Medal for conspicuous bravery in the recent fighting at Arras.

DEARTH OF TRADES TEACHERS.

Vocational Training Work With Veterans Greatly Hampered.

The backwardness of Canada in taking technical training into her educational system, and war conditions have complicated the work of the vocational training department of the Military Hospitals Commission in training returned men for civil life from the first, but with the influx of men from the front steadily on the increase, the difficulty becomes greater daily.

At the outset there were only a limited number of men fitted as instructors and many of these went overseas with the Canadian forces. Those who are holding positions in establishments institutions do not feel that they can leave their present positions for work which is only temporary.

The situation is further complicated by the fact that the returned men object to being taught by men who have not enlisted for active military duties. Therefore the lists are scanned eagerly for possible instructors upon the arrival of each group of returned men, and many men engaged as teachers now were the comrades of their students at the front. To this bond of sympathy much of the remarkable success has been attributed.

The despised sawdust is an essential ingredient of blasting powders, porous bricks, metal polishes, floor sweeping compounds, inlaid linoleums, and as fuel. Hemlock and oak bark is used for tanning leather. Beechwood shavings are a necessity in vinegar fac-

The Doings of the Duffs.

Boys and Books. They will mix all right if the boys are kept mentally alert and physically active with nourishing, easily digested foods. **Shredded Wheat Biscuit** is the ideal food for youngsters to study on or to play on because it contains the life of the whole wheat grain in a digestible form. The kiddies like it with milk or cream, with sliced bananas or other fruits.

Made in Canada.

PLANS FOR FOOD CONTROL.

Great Britain's Food Controller Issues An Appeal to the People of Canada.

Baron Rhondda has issued a statement explaining Great Britain's plans for food control.

Food regulations in Great Britain are much more drastic than those on this side of the Atlantic. Nevertheless they are voluntarily, not compulsorily, observed by householders and others. "If voluntary measures fail," says Lord Rhondda, "I shall have no compunction in putting the nation on compulsory ration." This crisply defines the spirit of Great Britain. Self-restraint and self-sacrifice are the keynotes of the nation's attitude. Men, women and children are proud to do their part in saving food and in increasing production. In both directions the national effort is sustained at a supremely high pitch.

Baron Rhondda, through the Food Administration of the United States and the Food Controller for Canada, has called upon both these countries to rise to the occasion. That call must meet prompt and full response. Should Canadians fail to emulate Great Britain, then all the sacrifice, all the devotion of Great Britain's people will have gone for naught. It remains for Canadians to make effective the efforts of the Old Country.

The whole of Baron Rhondda's message is significant. That he depends upon Canadians is evident. In effect he says:

Price-fixing must be international. Intercontinental. This means a readjustment of international and intercontinental trade relations. Each country must of necessity regard the others as partners and refrain from acting except with reference to them. Mr. Hoover, Mr. Hanna and I have been made responsible for food control in our respective countries. Food control in each must be adjusted to the requirements of all. Therefore we must work together to accomplish our ends. Our people will have reason to know that profiteering will be wiped out—that it is now fast disappearing—and that where high prices continue to exist they are to be attributed to war conditions.

Comprehensive plans have been developed whereby all international purchases of necessary foodstuffs are to be pooled and proportionately allocated . . . reat Britain and her Allies. All such contract prices are to be publicly regulated. "Unless prices are fair," Lord Rhondda asserts, "an unnecessary burden is placed upon the backs of the allied governments and consumers, American and Canadian taxpayers, and reactively on every food consumer in America for the sole benefit of a small section of the community."

It is only with Canada's unstinted help that Baron Rhondda's plans can be brought to fruition.

"The world-peril is not the submarine," says the British Food Controller, "but diminishing harvests and lessening herds."

TURIN TO LONDON IN SEVEN DAYS

SIX HUNDRED AND FIFTY-SIX MILES WITHOUT A STOP.

This Achievement Brings Nearer the Fulfilment of Predictions Coming Future of Aircraft.

"Captain Laureati, of the Italian Air Service, flew on Monday from Turin to London, covering a distance of 650 miles without a stop. He carried an autograph letter from the King of Italy to King George. The journey occupied seven hours 22 minutes.

"Shortly before tea-time on Monday, morning papers from Italy were safely landed at Hounslow," says the London Times.

"This very remarkable feat was achieved by Captain Giulio Laureati, accompanied by Private Michael Angelo Tonzo. Our Allies may well be proud of their gallant and skilful airmen. From the account of the journey which we give elsewhere it will be seen that the actual time from point to point was seven hours twenty-two minutes and a half.

"The travellers started from the old capital of Savoy at 8.28, Italian time, and arrived at ten minutes to four. The distance in a bee-line is about 560 miles, but that actually covered from earth to earth was a little over 656 miles. The speed, including the time spent in climbing and landing, was 80 miles an hour. The Alps were crossed at an approximate height of 11,000 feet above sea level, and the Channel passage occupied no more than a quarter of an hour.

Aircraft For Peace Purposes.

"The airplane was an 'S.I.A.,' as those built by the Societa Italiana Aeroplani are called, and the engine a Fiat.' The journey was in everything a brilliant success, though the north-west wind was contrary, and rough and tricky over the mountains.

"The route followed corresponds generally to that of the railways over a great part of the journey, and refreshments were carried in a thermos bottle under the airman's seat and absorbed through a rubber tube like that of a baby's bottle.

"Although this is the greatest international peace flight yet accomplished, it cannot compare in the mileage with Captain Laureati's recent non-stop trip in a similar machine from Turin to Naples and back, when he travelled 920 miles between 10.7 a.m. and 8.40 p.m., or with the French Lieutenant Marchal's flight of 800 miles across Germany in July.

"The point of real interest in this achievement is that it brings nearer to us all the great future which is opening to aircraft for peace purposes.

Prophecies Near Fulfilment.

"Lord Montagu of Beaulieu and others have foretold that before many years mails and passengers would travel regularly by air between London, the Cape, Egypt, India, and Australasia to the East, and between London, Canada and the United States to the West. The public listen to these prophecies without grasping how near they may be to fulfilment. The Italians, who have long been conducting a postal air service to Sicily, gave us an object-lesson in the postal possibilities of flight. Captain Laureati and his companion did in a little over seven hours a journey on which the fastest time by steamer and train has hitherto been more than three times that period.

"We congratulate our Allies on the brilliant performance of their soldiers, and we doubt not that it will greatly stimulate in this country the study of flight as applied to the arts of peace. The air raid on London, which followed not many hours later, keeps present to us its importance in those of war."

HOW WE WASTE FOOD.

Instances Where Small Leakages Might Be Profitably Stopped.

It is estimated that food to the value of about $60,000,000 is wasted annually in Canada. This seems incomprehensible at first sight, but if we begin to analyse the waste it can be more readily understood.

Let us cite a few examples of what might be estimated to be a conservative waste in our homes.

There is a waste in the nutritive value of potatoes of probably 20 per cent. as a result of peeling them before cooking as well as the loss from peeling. The peelings of potatoes (not new potatoes) used by an average family of five, weigh over half a pound per day. This means one hundred and eighty-two and a half pounds per family per year, and for the people of Canada means 29,200,000 pounds or 4,866,672 bushels.

Potatoes should not be peeled. They should be thoroughly cleaned and cooked with their jackets on, and are even better consumed that way.

The waste of bread is one of the most inexcusable wastages in any home, in as much as small pieces of crusts of bread can always be turned to good account in soups, with stewed tomatoes and in many other ways.

One slice of bread a day (1 ounce) or one third of a slice every meal is not an unusual waste for the homes of Canada, this amounts to 100,000 pounds a day, or 36,500,000 pounds per year. To this loss add the man power wasted producing this food, and the land necessary to yield the wheat.

One-sixth of an ounce of butter per meal would mean 18,250,000 pounds of butter wasted every year in Canada. This means tons of milk, herds of cows, and a large number of men to produce this wasted butter fat.

These are only a few instances of the possibilities of conservation and the responsibility resting on the individual home and on the individual. We have been so accustomed to being surrounded by plenty of the necessaries of life that we are afraid to be seen guarding the little wastages of food lest we might be considered small, mean, mercenary. On the contrary, waste is at any time a demonstration of ignorance, lack of appreciation of value of foods and lack of a knowledge of the principles of thrift.

NEW HEALTH FOR WOMEN

The most fateful years in a woman's life are those between forty-five and fifty. Many of the sex enter this period under depressing conditions through overwork or worry about the home, or through a condition in which the blood is weak or watery and so they suffer heavily. Among the commonest symptoms are headaches, feverish flushes, palpitation of the heart, dizziness, backache, depression and other well recognized disturbances of the health which signalizes that the blood requires attention. Women urgently need rich, red blood all their lives, but never more so than in middle-life, when the nerves are also weak and overwrought.

Now every woman can prove the prompt help afforded to her health by renewing and building up the blood. It is a test that any ailing woman can make by taking Dr. Williams' Pink Pills, for these pills make rich, red blood, which in turn stimulates the appetite, strengthens the nerves and restores full robust health. Thousands of women have found in Dr. Williams' Pink Pills new health and strength and with these a new happiness and interest in life.

So if you suffer, avail yourself at once of the splendid home treatment which Dr. Williams' Pink Pills so easily afford, and you will be among those who rejoice in regained health.

These pills are sold by all dealers in medicine, or may be had by mail at 50 cents a box or six boxes for $2.50 by writing the Dr. Williams' Medicine Co., Brockville, Ont.

THE BANNER PROVINCE.

Ontario Leads All Canada in Sunday School Work.

The last report received from all the provinces for presentation at the International Convention in Chicago, 1914, showed the Sunday School enrollment in Ontario 100,000 more than all the remaining provinces of Canada combined. What changes have come in the past three years will be reported soon when the totals are assembled for the International Convention in Buffalo. Ontario is gathering statistics now for presentation at the Provincial Conventions in Chatham and Peterborough, these reports to be corrected and perfected for the Buffalo Convention next June.

A campaign for the standardizing of Sunday Schools will be launched at Chatham and Peterborough. A Standard known as "The International Standard School" has been arranged for North America, and will be presented with plans for bringing the same to the attention of the individual schools. The observance of a continent Canadian wide "Come-to-Sunday-School Day" will also be considered.

Flowers are more fragrant when the sun is not shining on them, according to a French scientist, because the oils that produce the perfume are forced out by the water pressure in the plant cells, and this is diminished by sunlight.

Be sure to give the children a brisk rubbing down after their baths. It will send the blood leaping through the veins to carry life to every part.

There is nothing quite so good as spiced apple jelly. To make, pare, core and wash the apples, cook until soft and strain. Put into a muslin bag, ten sticks of cinnamon bark, eight cloves and six allspice. Drop the bag into two quarts of the apple-juice, and bring slowly to boiling point. Taste this frequently, and when the desired spicy flavor has been obtained remove the bag, add sugar and proceed as in making other jelly.

We require no better demonstration of the unwarranted waste of food on this Continent, especially fats, than the fact that men have become millionaires through the refining of garbages in some of the large cities. Obviously then, nothing should go into the garbage tin that can be used for human food. Smaller helpings would do away with a great deal of waste.

How often we hear women who do their own cooking say that by the time they have prepared a meal and it is ready for the table, they are too tired to eat. One way to mitigate this is to take, about half an hour before dinner, a raw egg, beat it until light, put in a little sugar and milk, flavor it and drink it. This will relieve the faint, tired-out feeling, and will not spoil the appetite for dinner.

Rye is one of the best cover crops to use in orchards. Plough it under before the last of May.

Whatever sacrifices health to wisdom has generally sacrificed wisdom, too.

GUARD THE CHILDREN FROM AUTUMN COLDS

The fall is the most severe season of the year for colds—one day is warm, the next is wet and cold and unless the mother is on her guard the little ones are seized with colds that may hang on all winter. Baby's Own Tablets are mothers' best friend in preventing or banishing colds. They act as a gentle laxative, keeping the bowels and stomach free and sweet. An occasional dose will prevent colds or if it does come on suddenly the prompt use of the Tablets will quickly cure it. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

WORLD'S LARGEST BIBLE.

Measures 7 ft. 10 in. Across When Opened—To Be Used in "Crusade."

A Bible 5 ft. 2 in. high and 3 ft. 6 in. across has been "built" at the Oxford University warehouse in Amen Court, London. In the binding of this great work it was found necessary to erect a wooden staging, from the cross beam of which depended an iron chain and pulley block, and by this means the position of the book was changed as occasion required. Without this mechanical arrangement the services of six men would have been required to manipulate the volume.

The width of the back is 10 in., so when the book is opened it measures 7 ft. 10 in. across. The binding —which is not quite complete—is of red levant morocco, which absorbed a dozen large goat skins. The front cover contains the arms of the counties of England and Scotland in blue morocco leather, decorated with gold, and surrounding the Royal arms, inlaid in heraldic colors. On the back of the book the arms of the Welsh counties are depicted in manner similar to those on the front.

The giant Bible is to be used in a "Bible crusade" in London.

But sweeter than the breath of balm
Upon the summer breeze,
And sweeter than the songs of birds
Among the leafy trees;
Yes, better than the tuneful bass
Of bullfrogs in the pool,
Or happy laugh of barefoot kids
As they go home from school,—
Will be the joy which swells my breast
When I go out to look
And find potatoes on my vines
Quite big enough to cook.

A Slanderous Printer.

It wasn't his fault, it was the proof-reader's. But the doctor never forgave the editor when the paper printed this notice about him: "Doctor Johnson felt the patient's purse and then issued a prescription." It should have been the patient's "pulse."

Minard's Liniment Co., Limited

Gents,—A customer of ours cured a very bad case of distemper in a valuable horse by the use of MINARD'S LINIMENT

Yours truly,
VILANDIE FRERES.

Experience has shown that fertilizers cannot profitably be used as substitutes for manure, for the growing of clover, or for good soil management, but that their role is rather supplemental to all these rational means for the upkeep of soil fertility.

Minard's Liniment Cures Dandruff.

Mother—Joan, dear, have you been doing anything to the ink? Joan—Yes, mummy; I put some water to it to make it write weak. I've been writing a letter to daddy—and I wanted to whisper something to him! of the dairy districts of Canada.

GIRLS! LEMON JUICE IS SKIN WHITENER

How to make a creamy beauty lotion for a few cents.

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold cream. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands.

BETWEEN THE BATTLES.

Let us bury him here
Where the maples are red.
He is dead,
And he died thanking God that he fell
with the fall
Of the leaf and the year.

Where the hillside is sheer
Let it echo our tread
Whom he led.
Let us follow as gladly as ever
We followed who never knew fear.

Ere he died they had fled,
Yet they heard his last cheer
Ring clear—
When we lifted him up he
Would fain have pursued, but grew
dizzy instead.

Break his sword and his spear!
Let this last prayer be said
By the bed
We have made underneath the wet
wind in the maple trees mooning
so drear:

"O Lord God, by the red
Sullen end of the year
That is here,
We beseech Thee to guide us
And strengthen our swords till his
slays be dead."

—Francis Sherman.

Minard's Liniment Cures Burns, Etc.

The Reason Why.

The following amusing anecdote was told recently by Mr. J. H. Thomas, the secretary of the Amalgamated Society of Railway Servants.

It appears that a newly arrived batch of German prisoners was being taken by train from a certain English port to a place of detention inland, when a Hun officer, much to his indignation, found himself in a third-class carriage with a Tommy as escort.

In a very injured tone he asked:

"Why have I, an officer, to travel third-class?"

"Because," was Tommy's reply, "I've got to guard you, and they didn't think a British soldier ought to be put in a cattle truck! See?"

"The man who is afraid of burning up his wick need not hope to brighten the world."

MONEY ORDERS

Buy your out of town supplies with Dominion Express Money Orders. Five dollars costs three cents.

During recent years the export of Canadian apples to the British Isles have totaled about 1,500,000 barrels per annum.

Minard's Liniment for sale everywhere.

Do not sell breeding animals unless they can be replaced immediately with better stock. The temptation of high prices or undue fear of high prices of feed mislead the owner into the error of selling at this time.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist has'n't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

CRISIS OF WOMAN'S LIFE

Change Safely Passed by Taking Lydia E. Pinkham's Vegetable Compound.

Wagoner, Okla.—"I never get tired of praising Lydia E. Pinkham's Vegetable Compound because during Change of Life I was in bed two years and had two operations, but all the doctors and operations did me no good, and I would have been in my grave today had it not been for Lydia E. Pinkham's Vegetable Compound which brought me out of it all right, so I am now well and do all my housework, besides working in my garden. Several of my neighbors have got well by taking Lydia E. Pinkham's Vegetable Compound."—Mrs. VIOLA FINICAL, Wagoner, Okla.

Such warning symptoms as sense of suffocation, hotflashes, headaches, backaches, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and dizziness should be heeded by middle-aged women. Lydia E. Pinkham's Vegetable Compound has carried many women safely through the crisis.

The Paisley Advocate

PAISLEY, OCT. 31st, 1917

—Dorothy, the youngest daughter of Mr and Mrs W Scott, formerly of Paisley is becoming one of the best known and most popular little girl singers in Toronto. She has been singing at quite a number of recruiting meetings and soldiers' benefits. On a recent appearance she was presented with a bunch of American Beauty roses by a returned soldier.

—It should pay farmers to fatten their fowl. A bunch of 72 thin barred rocks pullets delivered to Ballachey, Laidlaw & Co. were taken in hand by Mr W Archer, and after feeding them for ten days at a cost of only $1 95 for feed, the birds gained 38 lbs, or an added value of $5 6 and a profit of $3 65 over cost of feeding. Those having fowl should profit by this demonstration.

Victory War Loan Captains

The County of Bruce has been fully organized for the War Loan Campaign. Memorial Service

"He being dead, yet speaketh," was the text from which Rev G C Little preached at the memorial service in Knox church on Sunday evening, in honor of the late Pte D J Bain. The foremost thought of the discourse was that the influence of the dead is often greater than in life. Death does not diminish a hero's power and influence. The grave is not to be looked upon as the end of life, but the beginning of the true soul's greater life. The speaker asked his hearers to go with him to that graveside in a far country across the sea and find what it says to friends and to the nation. It utters a call to a new consecration. Our boys did not go for the glory of conquest nor for pleasure to be desired, but because their hearts had been touched by the cries of suffering humanity, and the shedding of their blood imposes upon us a greater consecration to the cause of humanity in the interests of those who are suffering or those who are in darkness. We must follow new ideals, give ourselves to a larger service, show a deeper sympathy and enter upon a nobler and truer life of unselfishness—see through those sacrifices a new vision. The death of the soldier speaks to us on the great things for which the soul lives. This is no time for merry-making folly and sin, or living for the mere pleasure of the passing hours. We should be living a greater life in order that his blood shall not be spilled in vain. That death is a condemnation of the life of selfishness and vice that has been followed by too many and a protest against the licentiousness, vileness and profligacy extant. It speaks to us, too, of the changed world and asks if we have not been sobered and lifted to a higher plane. It speaks to us also of the continuity of life

The Late John McDermid

The grave covered over a prominent highly esteemed and fine old country gentleman last Friday afternoon, when all that was mortal of the late John McDermid of Gillies Hill was consigned to its last resting place beneath the sod of Kirk's cemetery. For over 63 years the deceased had been one of the outstanding men of the settlement into which he came at a period when each faced the herculean task of making for himself a home and a livelihood from lands covered with dense woods. Among the list of those who bore the brunt of that great battle for the extension of the bounds of civilization none did their part with more cheerful fortitude than the subject of this sketch. Throughout his active and strenuous career as a pioneer woodsman or more modern tiller of the cleared acres, he was progressive and aggressive in his daily duties, faithful and true, sociable, kindly and obliging to all his relations with his fellowmen. By his death there is severed one of the last visible links that connected the present day with the beginning of man's operations in this part of our province. He was a man of splendid physique, and a good representative of the class who by their combined efforts made Canada a country worth while. Mr McDermid was among the first to take an active participation in the organization of farmers for mutual advancement of their interests, the formation of an agricultural society enlisting his hearty support, and the success of the Paisley Fair as a regular event was due to the zeal of a coterie of men among whom he was always a leading spirit. For twenty years he was one of the head officers of the agricultural society here, and no one did more to extend the membership list or attend to the details of management. He also lent his services to the township board of health. In religion he was a Baptist, and a Liberal in politics. He was born on April 13th, 1823, in Islay, Scotland, a son of Alexander Mcermid and Ann McNeilds. After the death of their parents, the sons, Neil, Peter, John, Archibald and Alexander, with their sisters, Margaret and Mary, came to Canada and settled with relatives in Nottawasaga. John went to Chicoutimi, where he met and married Margaret Ann Campbell, of Boston Mills. Soon after their marriage Mr and Mrs McDermid came to Elderslie in the year 1855, and spent the balance of their lives on the homestead then taken up at Gillies Hill. Mrs McDermid predeceasing her husband on July 10th, 1894. Of their family of eleven there are three sons and two daughters living—Alex A, of Butte, Montana; John A, on the homestead; and Neil P, of Charleston, West Virginia; Catherine M, of Seattle, Wash; and Mrs Elizabeth McAlpine, of Pasadena, Cal. One sister of deceased survives him—Mrs McEwing, of Dunfroon, Ont. The funeral on Friday afternoon was attended by a very large concourse of people. The services were conducted by Rev M Neilson, of Paisley Baptist church, assisted by Rev Mr Wilson, of Salem Presbyterian church.

Another Convention in S. Bruce

We have been informed there is a movement on foot to call a Win-the-War Convention in Southbruce and the party candidates for the Dominion House who were both nominated before there was any talk of Union Govt. ought both to be asked to resign and take their chances for re-nomination. It is also suggested that both nominees drop out and that the joint nomination be tendered to Mr Michie as a Union Govt. candidate. He did much towards raising the Bruce Battalion and has been foremost in patriotic work in this County since the war began, and it would only be fit and proper that a man who would so ably represent this riding should be elected by acclamation.—Enterprise.

Philharmonic Concert a Treat

Walkerton Philharmonic Society was greeted by a large audience for their concert in the town hall here on Thursday evening, and the excellent programme was highly appreciated by all who have a love for good music. The chorus was composed of 45 voices, and their work showed the result of conscientious practice and training under the direction of Prof Leeson, who wielded the baton on this occasion. The opening number, which embraced British, French, Russian and Canadian national songs, was rendered with spirit. In the following selections, "Hail to the Dawn," by Suppe, "O Hush Thee, My Babe," by Sir Arthur Sullivan, "Believe Me, If All," by Balfe, "Lullaby," by Elgar, "Songs of the Bells," by Planquett, and "Slumber Song," by Lohr, the beauty of each composition was charmingly unfolded to the listeners, who heartily applauded each. "Old Doc Boggs," by Petrie, was a humorous number enthusiastically received. A famous English lament said, "He is a true patriot who increases and improves the music of his country." The Philharmonic Society is entitled to a degree of credit on this score. Although they may not originate new themes, they are doing a bit to interpret and rendering the productions of some of the great song writers, thus helping to improve the taste and elevate the musical ideals of their fellow countrymen. Mr C B Robinson is a cornet artist, and his solo "A Dream," was so persistently encored that he responded with a second. A vocal solo by Miss Whitehead, violin solo by Miss Schmidt, recitations by Miss Jean Norrish, Miss P Cunningham and Miss Irwin were all well received. Miss Flossie Cosens, formerly of Paisley, is the piano accompanist for the Society. The entertainment was both a musical and financial success. Knox church Branch of the Women's Patriotic League will have a nice surplus left from the $58 40 door receipts to expend for material in making soldiers' comforts. At the close of the concert the ladies served a dainty lunch for the musicians, in the Public Library room, where also a vote of thanks was tendered the visitors, Messrs S F Ballachey and H McKerracher being the spokesmen. Those Paisley car owners who transported the singers from Walkerton and back contributed very considerably to the comfort and enjoyment of the visitors, as well as to the success of the evening. By furnishing a new Bell piano Mr Peter McKinnon relieved the consternation that prevailed when the old instrument in the hall was pronounced utterly unfit for the special service required. The ladies under whose auspices the concert was held wish us to tender their thanks to all who assisted in connection with the arrangements that were carried out.

KEEP YOUR HOLIDAY HEALTH

Make it your business to always look and feel as well as you do at the end of your vacation. Sunshine, fresh air and exercise are nature's great restorers and the health gained during a holiday should carry you well along to the next vacation.

It is most important that the blood be kept cleared of impurities. This is the business of the Kidneys. One hour's incapacity on the part of the Kidneys and the blood begins to get clogged with poisons which are carried to all parts of the body—giving rise to one or more of the following symptoms:—

Rheumatism follows the crystallizing of uric acid in the muscle tissues and joints. Uric acid to the extent should be eliminated by the Kidneys.

Swollen joints and ankles indicate the immediate need for Gin Pills. Pains in the sides and back and through the groins, constant headaches, restless nights, derangements of the urinary system, stone and gravel, puffiness under the eyes and frequent chills—all these should be taken as warnings and a treatment with Gin Pills taken at once.

50c. a box or 6 boxes for $2.50, or a free sample will be sent upon request to National Drug & Chemical Co. of Canada, Limited, Toronto, or to the U.S. address, Na-Dru-Co Inc., 202 Main St., Buffalo, N.Y. 123

Farmers Handling Booze

Liquor prosecutions by Inspector White have resulted in several men of the township being called to the county town to give an explanation of certain loads of wet goods they have been getting in. These little expeditions to the express offices may afford Pachanalian sport, and excite motor-running excitement, and possibly a little financial profit on the side but the sum of all this to the fellows who are caught with the goods should be a deterrent warning to others who are inclined or tempted to indulge in that line of diversion. Last week the Inspector had four farmers on the gridiron, and they found it mighty warm business. Magistrates Tolton and Richardson heard the charges. Robert Osborne of Greenock lifted a shipment of 24 bottles of whiskey at Pinkerton station and Inspector White made him a personal visit two weeks later finding the liquid had all disappeared in that time. Osborne claimed that his neighbors had kindly assisted him in disposing of the stuff, but that didn't save him from a $200 fine. Duncan Curry, of Bruce Tp received a consignment of two cases of whiskey on Oct 6th, and ten days later there was none left. He claimed that a wedding party at his home, when his nephew was married, accounted for the expeditious licking up of the oh-be-joyful. Nevertheless, it cost Duncan $200 While going home with the cases he had driven his horses into Knox's hotel sheds at Pinkerton, and left the outfit there for 15 or 20 minutes, and a second charge may be made out of this stop-over. The Ontario License Commission is to decide whether this is an infringement of the Ontario Temperance Act. Archie Bell, of near Tiverton, was fined $25 for being intoxicated, also another $10 for driving an auto on the road while being in that condition. Alex Russel, another Greenock farmer, also had got in some booze, but the charge against him did not result in a conviction. His brother Charles, who was summoned as one of the witnesses in the case, became excited at the prospect of being taken to court, and it worked upon him so that he apparently decided to evade the ordeal by running away from it, as he has not been seen by anyone in the neighborhood for over a week.

Will Class One Provide The One Hundred Thousand Men?

It will be greatly to the advantage of Canada if the entire quota of 100,000 men to be raised under the Military Service Act can be secured from the first class; that is, from the men between the ages of 20 and 34 who were unmarried or widowers without children on July 6th, 1917.

This is almost self-evident for the following reasons:

It is admitted that, between the ages of 20 and 34, the average man is at the height of his physical strength and is most adaptable to the change of conditions from civilian life;

the military service of unmarried men and widowers without children would occasion less distress than that of most others, since they are largely without dependents. Also, it would entail less financial burden for Canada, through separation allowances, etc.

Authorities estimate that, after all proper exemptions have been allowed, Canada should be able to produce from the first class 100,000 men fit for service, so the drain upon the man power of the country will not be severe.

Members of Class One will be well advised to present themselves for examination immediately to the Medical Board in their district. Upon examination as to their physical fitness, they will be placed in one of the following categories:

Category A—If fit for service in overseas fighting units.
Category B—If fit for service overseas in Army Medical Corps, Forestry Battalion, etc.
Category C—If fit for service in Canada only.
Category E—If unfit for military service of any nature.

If not placed in Category A, the applicant will know that he is not liable for immediate service, but will go to the Post Office and send in a claim for exemption with his Medical Certificate attached, when he will receive in due course a certificate of exemption until those in his medical category are summoned for service.

Where a man, who is placed in category A, feels that exemption should be allowed, an application form can be secured from the postmaster. This form, when filled in, will be forwarded by the postmaster to the registrar of the district, and the applicant will be informed by mail as to the time and place for the consideration of his application by the Exemption Board.

Issued by The Military Service Council.

137

Hugh Clark again Nominated

North Bruce Conservative convention was held at Tara on Thursday last, when Col Hugh Clark was re-nominated as candidate for the House of Commons. There were no outside speakers present. Mr Clarke gave a review of the Military Service Act and of the union movement, and stated he was strongly in favor of both. No contentious politics were touched upon in Col Clark's speech. The convention was called as a unionist one, and everyone was invited to be present. There was a good attendance particularly from the southern portion of the riding.

CARD OF THANKS

Mr and Mrs J A McDermid wish to thank neighbors and friends for the kindness and sympathy extended to them in their recent bereavement.

Pinkerton Honour Roll

In Pinkerton Presbyterian Church hangs an Honour Roll, bearing the names of the boys of that Congregation who are at the Front. No less than seventeen names are on that roll and of these three have made the supreme sacrifice. The names are:—Herold Pinkerton, *Ernest A Reid, Dr John Reid, Rhuer Gregg, Samuel Reburn, Andrew J Bain, Edgar Campbell, John Woolfe, Gordon Garland, Lorne Reid, William Bell, Gordon Pinkerton, Henry Campbell, *Edgar Garland, *John McAfee, Russell G Birrell. The names with * are those who were killed in action.

This is the school for those who want the practical training and the good positions. Commercial, shorthand and Telegraphy departments. Free catalog. W J Elliott, Pres. D A McLachlan, Prin.

FOR A WHOLESOME SOCIAL LIFE

An accident of an unusual character took place on Friday night last at the farm of R. J. Fleming, when his fine large cement silo was destroyed. The silo was sixteen feet in diameter and fifty-one feet in height, and contained the product of thirty-five acres of corn, which is valued at least $1000. During Friday night a terrific explosion took place, which could be heard at Dunbarton, a distance of four miles, but which was taken for distant thunder. The explosion was due to the generation of gas from the fermentation of the ensilage, and which could find no way of escape. When the explosion took place the silo toppled over. No time was lost in making preparations to save the ensilage. Metal silos much smaller in size are being erected and the ensilage is being put through the cutter again, and it is hoped that the greater part of it will be saved.—Pickering News.

London Free Press: Mr. John Purvis of Holyrood, the candidate of the Liberal-Conservative Association in South Bruce, is a guest at the Grigg House. Mr. Purvis, who is in the city on a business trip, said last evening that crops in Bruce this year were the equal of any he had seen in a decade. Mr. Purvis was nominated three years ago in convention as a supporter of the Government of Sir Robert Borden and his win-the-war policy. "I am for the Borden win-the-war policy first, last and always," said Mr. Purvis to The Free Press last evening. "The people of South Bruce see the wisdom and need of the Militia Service Act and I have the greatest confidence that they will bury party politics at this crisis in our history."

If the social life of a people is not wholesome, their moral stamina will be undermined, and their physical prowess broken.

That plain truth, proved beyond dispute, alike by science and by history, is coming home to statesmen and to military and naval officers with such emphasis, indeed almost with alarm, that what the Secretary of the American Navy calls "unpardonable prudery" is no longer tolerated in the discussion of physical diseases by serious minded people. The man in the street is beginning to understand what is meant and what is involved in the campaign now under way for a more wholesome social life. In all parts of Canada, and in all thoughtful circles of Canadian society the word of warning is spoken out loud. What used to be taboo is now openly talked of, and subjects that were discussed only by "people with a fad" are now presented by men with brain and by women with a soul.

Of course it still is true that the great mass of the people do not hear and will not heed. It still is true that the first response of the public mind betokens exaggeration and hysterics. It is true that a little knowledge of the real facts is a dangerous thing. In the newspapers and in public addresses the real pros and cons of the social problem are often hidden behind personal opinions which are neither informed nor steady. Because this thing is done here, or that thing is done there, it is sometimes made to appear that no progress toward a wholesome social life is being made.

But let there be no disheartenment among social reformers. The situation in Canada is big with promise, bursting with hope. Never in all the past was the public conscience so roused as it is now, or the public mind so impatient of the platitudes of social immorality. Vampires like Stanford White and social degenerates like Harry Thaw, are called vampires and degenerates in the very cities that, ten years ago, named them in the first Four Hundred. And when Canada next guts its social breath, what Secretary Daniels calls "the false double standard" will have none to do it reverence.

And even more than that; the day is at hand, very near at hand, here in Ontario, when venereal diseases among men as well as among women, will be reported under penalty by physicians, as smallpox and tuberculosis and leprosy are to-day. And even already, especially in the United States, where facts are looked at squarely, the man in uniform who contracts venereal disease through his own social immorality is not only confined in the hospital, but his pay is stopped. In the military camps in Canada the leaders in reform are the officers of the regiments. The generals are requiring continence among both officers and men. They have little patience either for excuses or for palliatives. And for good reason. The man who has neither the courage nor the conscience to be lord of himself and master of his own body—what would he do in the front of battle?

But in a democracy like Canada the social life is one. There never will be a wholesome military life until civilianism also is made clean and pure and strong. It is a gigantic undertaking, this movement for a clean social life. It is a long campaign, longer than the campaign against Prussian militarism. But the fight is on, and there will be no turning back. The manhood and the womanhood of Canada must be redeemed from the "false double standard." Canadian citizenship must be made true to honor and purity and truth.—Toronto Globe.

THE BAPTIST RALLY AT GLAMIS

At the third annual rally of the young People's society of the Baptist churches in the Walkerton Association, held at Glamis, about 70 delegates registered from the various societies. Churches outside the Association represented were Paisley, North Bruce, Tara, Port Elgin and Willow Creek.

At the afternoon session the delegates were led in thanksgiving to God by Rev M Neilson of Paisley, in the absence of Rev J T Diagman, Mt Forest, after which the delegates were welcomed by Mr Hector McLean, President of the Glamis Union. Mr McLean gave a royal, hearty welcome on behalf of the Glamis young people, suggesting that they had large and beautiful hearts with a capacity for entertaining their sister unions, as large as the church in which they worshipped, which is by no means small, for the size of the congregation. Mr Ray Monday of Wingham responded. Rev N R McLeod of Mt Forest addressed the Societies on "Why I am a Baptist," giving many reasons for his position as a pastor in a Baptist Church. He stated that the Baptist position was an honorable one, with a history known to all, behind it. He advocated separation from Church Union on its present basis. His closing remarks was a challenge to all young people to serve God faithfully. Rev Jos Jones of Ingersoll, addressed the audience briefly on "Character Building."

The evening session from 7 30 to 9 45 was full of enthusiasm and power. It began as did the afternoon session, with a song service, led by Mr Fleming of Mt. Forest.

The Roll Call of unions and presentation of pennant to largest delegation, was a very interesting feature, Wingham Society with 80 registered delegates carried the banner for attendance. Tiverton was second largest in delegation. A "Rally Song" was then rendered by the Glamis choir. Rev Gordon Holmes, B A, of Goderich addressed the meeting on "The War and the Call to Prayer." His whole address called forth much thought and sympathy. Mrs Diagman of Mt Forest delighted the audience with a splendid solo. The closing address by Rev Jos Jones was "Personal Evangelism." His remarks were a fitting conclusion to the day's meetings.

The Young People's Society in the Baptist Churches of the Dominion have been called "Baptist Young Peoples' Union" because of the Union of the Junior and Senior Societies, which until recently were separate units. One pastor on being asked what B Y P U signified, answered, "Boost Your Pew Up," but a member of the Society answered "Boost Your Pastor Up." Perhaps the union of these two ideals, as viewed by pastor and laymen, helped to cultivate and develop the interest shown in Young Peoples' work in the large delegations from Mount Forest, Wingham, Goderich, Tiverton, etc.

—Lord Northcliffe made the statement a few days ago that the war had just begun, and after reading what the German's did to Italy's army last week, we begin to think there may be something in the distinguished Englishman's statement. "While it is possibly true," he says, "that one third of the German population has become sickened of war, the ruling two-thirds are firm in their convictions that the war is being prosecuted successfully to a victorious culmination for their government."

ILLUSION

By Henry Morton.

(Copyright, by W. G. Chapman.)

Rev. Arthur Smith and his young wife stopped simultaneously, horrified, in the market place of Travancore. A crowd of Hindus had gathered about a man who lay, with a placid look upon his face, on a bed of sharp-pointed nails.

Arthur stretching himself out as if he were on a comfortable mattress, the fakir rose up, smiling, and held out his copper bowl for alms. The rice of the populace clattered against the sides.

When the bowl was thrust out to the missionary he turned away with a frown and drew his wife's arm through his.

"Sometimes, Mary, I doubt whether these people can be civilized," he said. "What a disgusting exhibition! And they call that a holy man!"

Mr. Smith was only a year out from the theological college in Iowa. He had felt a call to act as missionary among the heathen. He was a young man of ardent mind and intensely in earnest, but a little narrow, a little incapable of entering into the life of the Indians. Nevertheless he had accomplished a great deal of good in Travancore, and of the people whom he was inclined to think unamenable there were many who spoke with good will of him.

It was three days later when he was surprised to see the fakir confronting him in his study. How the man had got in he did not know, for his native servant had not admitted him.

"No," said the missionary sternly. "You may give rice to poor fakir?" asked the man, smiling.

"I am here to heal men's souls, not to encourage such barbarous exhibitions. Do you suppose you can do any good to yourself or others by those self-inflicted tortures?"

The fakir looked at him gravely. "There are things you know nothing of, young man," he answered. "The time may come when you will be glad of me."

"I shall always be glad of you, as you call it, if I can get you to come to our meetings and give up your savage ways," said the missionary, with feeling. "Don't you feel anything within you that urges you to anything higher? Do you suppose lying on a bed of nails leads to a better life?"

"Yet your own prophet has taught that the body must be crucified," responded the fakir, in excellent English.

Mr. Smith stared at him. "Then, if you know that much, you know enough to reason," he said. "Come to our meeting next Thursday week and we'll have a talk together."

"I shall come to you next Thursday evening, and we will have a talk together," the fakir responded. "Salaam!"

Mr. Smith rubbed his eyes. The fakir was gone, apparently through the closed door.

He called his wife and told her. She was positive nobody had entered the house. She was afraid.

"I wish we'd never come; to this heathenish place," she sobbed. "These people are devils. And with the talk of an uprising I—I wish I were back in Des Moines, that I do!"

Days passed and the rumors of a native outbreak increased. The garrison, depleted on account of the war, was insufficient to overawe the fanatics who paraded the streets, threatening death to all foreigners on the occasion of the great annual festival that was to take place the following week. The Europeans were advised to leave. Smith, wavering between the double duty, at last decided to take his wife down to the coast.

They were in the midst of packing when the storm broke. A distant murmur rose into a yell. A mob armed with swords came rushing through the streets, burning and looting. The native servants had fled.

Smith hurried his wife into the little garden. A glance showed them that their escape was intercepted. As the bearer of the hated tidings of another faith, he was marked for the fury of the rioters. The crowd swept through the garden gate. At their head, his eyes alight with fanaticism, was the fakir, torch and sword in hand.

"Kill! kill!" the mob shouted.

Smith very, simply placed his arm about Mary's waist, and together they waited for the end.

With a yell the fakir raised his sword and thrust. Smith saw his wife fall, pierced through the heart. Red swam before his eyes, and he rushed upon the savage with clenched fists. But he saw the sword bright before him, felt a blow on his breast, and, unconscious of pain, realized that the fakir was withdrawing the hilt from his own body. In a swoon he toppled to the ground. And he remembered, with strange incongruity, that this was Thursday.

He heard the yelling mob sweep onward, and with his last effort he groped toward his wife, found her hand, and held it. And then consciousness forsook him.

Somebody was bending over him, stroking his forehead. He opened his eyes. He saw his wife kneeling over him.

"Thank God you are alive, Arthur!" she whispered. "Are you hurt? Try to rise."

He sprang to his feet, staring at her in bewilderment. There was not a wound upon her; and, looking down, he could see none on himself.

"Mary! What has happened?" he cried.

"I don't know, Arthur," she answered, looking at him in equal astonishment. "I thought I saw you stabbed."

"And you!" he cried in wonder. And then he realized that both had been the victims of the fakir's illusion; that the man had saved them, either by sleight of hand, or by accomplishing some one of those illusions that the fakirs perform for the entertainment of their audiences.

They fell into each other's arms. In the distance were the dwindling cries of the mob. Their house was uninjured. And, as they stood there, they saw a troop of cavalry ride down the street, driving the mutineers before them, cutting them down with their swords.

"At least, I did not desert my post," said Smith. And with sudden gratefulness to the fakir he took Mary into his arms again. They had never felt so near to one another.

Smith Looked Up With a Start.

Smith looked up with a start. He was back in his library, and before him stood the fakir, still holding out his copper bowl and whining.

"You no give rice to poor fakir?" asked the man.

Smith looked up over his shoulder. When the man had entered the room the clock had pointed to twenty minutes past ten. Now it was still twenty minutes past ten. And the sentence that he man was speaking was the same as that with which he had entered the room.

In less than a second the whole of the episode had been implanted upon his mind by the art of the beggar before him.

He sprang to his feet. "Mary!" he called.

"Did you want me, dear?" answered his wife, entering with a placid smile.

"How did this man get in?"

"Why, I just let him in. You know you said you would see anybody—"

Smith threw three pice into the copper bowl, and the fakir, saluting gravely, turned and made his dignified exit. Smith turned to his wife.

"I think, my dear," he said mildly, "that in future we shall try—try to get to know a little more about our people instead of—of shutting ourselves away from them."

Calves suffer in bad weather and a few days' exposure to cold and dampness have stunted thrifty, growthy calves.

To extinguish flames from gasoline or petroleum, pour milk over them and they will be put out immediately, for the milk forms an emulsion with the oil and prevents the fire spreading.

One of the tasks to which the explorer, Donald B. MacMillan, head of the Crocker Land expedition, had set his hand during his sojourn in the Arctic is the compiling of an Eskimo-English dictionary. The work already comprises more than 3,000 words and is growing continually.

About the House

DOMESTIC SCIENCE AT HOME

Fourteenth Lesson.—Yeast.

Fermentation, which is an important factor in the making of bread, is produced by the presence of yeast. It has been known for thousands of years that many organic bodies, when exposed to certain changes, will ferment. The dust in the air contains much fermenting organisms; also the air contains molds and bacteria, such as stale bread mold and a damp atmosphere mold, as on leather. Wine, beer and milk become sour when exposed for a certain length of time to the atmosphere above fifty-eight degrees Fahrenheit.

Ancient history shows us that early Egyptians obtained their wild yeast from the air and so started their dough. They also retained a portion of each bread-mixing to start the next. Yeast plants can be gathered and cultivated from the air by exposing a dish of fermenting sugar to the atmosphere.

Yeast is a plant of the simplest structure consisting of a chain of single cells, growing very rapidly and multiplying a thousandfold, if given proper food for immediate assimilation. This food must contain protein, sugar, mineral ash and starch.

Yeast is divided into two classes—wild and cultivated yeast. Wild yeasts have no bearing upon this subject. Cultivated yeast is now furnished in the form of compressed cakes.

These cakes must be of a reliable character and of uniform goodness, so that they will produce a healthy active fermentation. A low-grade yeast will give an undesirable ferment and cause certain changes to take place before the proper time; this will cause the bread to have a weak and flavor and also lower its nutritive value. The process of fermentation of an alcoholic nature creates a carbon dioxide gas, which when the dough is baked in an oven of 825 degrees Fahrenheit, produces a light, porous loaf of bread.

That the yeast cells may have successful growth, it is necessary that the flour be of good quality, that a temperature from sixty to eighty degrees Fahrenheit be maintained and that the dough have active manipulation at the proper periods.

The various degrees of fermentation are known as the alcoholic, the acetious and the putrefactive. Therefore, the process of fermentation which has for its object the making of bread, must be of an alcoholic nature.

Acetious fermentation, when present in the right amounts, gives a good flavor to the bread, but if it is permitted to ferment too strongly, it will check the alcoholic fermentation, which will cause a dull, heavy loaf.

The putrefaction stage is the last stage of fermentation, which results in a damp, smelly, sticky loaf of bread that is unfit for use.

Alcoholic Fermentation

The carbohydrates and sugars play an important part in alcoholic fermentation, changing the sugar to a gas called carbon dioxide, and alcohol. This fermentation is produced by yeast which feeds upon the malt matter in the flour and other ingredients added to the dough.

Salt

Salt plays an important part in the action of the yeast upon the dough. Salt which is soluble in hot and cold water, quickly absorbs the dampness from the atmosphere. For successful results use a high-grade salt, which will give the best results. The amount of salt added to the dough controls the action of the yeast. Too little permits fermentation to progress too quickly while too much has just the opposite effect. It will delay the action of the yeast beyond its proper time.

Saving Substitutes.

The following are recipes issued by the Domestic Science expert of the Food Controller's office for dishes to take the place of beef, bacon and wheat in order to conserve these foods for our soldiers overseas.

Fish Chowder.—2 cups potatoes (sliced), 1 cup onion (sliced), 1 cup fish (sliced). Cook the potatoes, fish and onions separately and drain. Make a white sauce over the fish, potatoes and onions in the white sauce, re-heat and serve hot.

White Sauce.—2 tablespoons flour, 2 tablespoons butter. Heat those in a frying pan and cook for one minute. Do not allow to brown. Add one cup of milk and stir until perfectly smooth. Season with one half teaspoon of salt and one-eighth teaspoon of pepper.

Salmon Croquettes.—1¾ cups cold flaked salmon, 1 cup thick white sauce, few grains cayenne, 1 teaspoon lemon juice, salt. Add sauce to salmon, then add seasonings. Spread on a plate to cool. Shape, dip in crumbs, egg, and crumb again, fry in deep fat, and drain.

Macaroni and Cheese.—Cook macaroni in boiling salted water for twenty minutes. Drain and pour over it cold water. Put a layer of macaroni. Sprinkle with grated fish. Repeat. Pour the white sauce over this and cover all with buttered crumbs. Bake until the crumbs are brown.

Macaroni, Cheese and Tomato.—Prepare as for macaroni and cheese, only use tomato sauce instead of white sauce. Prepare as for a white sauce, using tomato juice instead of milk.

Scrapple.—Boil hogs-head and other lean pieces of meat as shanks and liver. Cook very tender. Take out bones, grind whole, and put in water in which it was cooked, and when boiling hot stir in gently 1-5 as much cornmeal as meat. Season to taste; cook 2 hours. Pour into mould and serve fried.

Pea Soup—Marrowfat peas, 1 teaspoon sugar, 1 pint cold water, 1 slice onion, 2 tablespoons butter, 2 tablespoons flour, 1 quart milk, ½ teaspoon pepper, 1 pint milk. Add sugar and cold water to the peas, and simmer twenty minutes. Rub through a sieve, re-heat, and thicken with butter and flour cooked together. Scald milk with onion, remove onion, and add milk to pea mixture, season with salt and pepper. Peas too old to serve as a vegetable may be utilized for soups.

Cooked Cereal Muffins.—Cooked oatmeal, 1 cup; flour, 1½ cups; milk, ½ cup; egg, 1; salt, ½ teaspoon; sugar, 2 tablespoons; melted dripping, 2 tablespoons; baking powder, 3½ teaspoons (level). Add half the milk to the beaten egg. Mix the rest of the milk with the cooked oatmeal, and stir until smooth. Then combine with the dry ingredients and beat well. Last of all add the melted dripping, and beat again. Bake in greased gem pans.

Cream of Lima Bean Soup.—1 cup dried lima beans, 3 pints cold water, 2 slices onion, 4 slices carrot, 1 cup cream or milk, 4 tablespoons butter, 2 tablespoons flour, 1 teaspoon salt, ⅛ teaspoon pepper. Soak beans overnight. In the morning drain and add cold water; cook until soft and rub through a sieve. Cut vegetables in small cubes, and cook five minutes in half the butter; remove vegetables, add flour, salt and pepper and stir into boiling soup. Add cream, re-heat, strain, and add remaining butter in small pieces.

Fried Cornmeal Mush.—Cornmeal, 1 cup; water, 4 cups; salt, ½ teaspoon. Put the salt in the boiling water, and sifted cornmeal. Cook thoroughly. Pack into tins as a baking powder tin to form in a mould. To fry turn out of the mould. Cut into slices, dip in dry oatmeal and fry in dripping. Serve with syrup as a breakfast or supper dish.

Johnny Cake.—Cornmeal, 1 cup; white flour, 1 cup; sugar, 1-3 cup; sour milk, 1¼ cups; soda, ½ teaspoon; baking powder, ½ teaspoon; salt, 1 white flour, 1 cup; sugar, 1-3 cup; sour milk, 1¼ cups; soda, ½ teaspoon; baking powder, ½ teaspoon; salt, 1 teaspoon; molasses, 1 tablespoon. Mix and sift the dry ingredients twice, and gradually add the sour milk. Beat well, and bake in a shallow greased pan, in a moderate oven.

Corn Muffins.—1 cup cornmeal, ½ cup; flour, ½ cup; sour milk or butter milk, 1 cup; molasses, ¼ cup; eggs, 1; baking powder, 1 level teaspoon in the flour; soda, ½ teaspoon dissolved in the milk; salt, 1 teaspoon; melted fat, 1 tablespoon. Mix and sift the dry ingredients. Add the milk and egg well beaten. Last of all add the melted fat, and bake in a shallow pan in a hot oven.

Buckwheat Gems.—Buckwheat flour, 1 cup; milk, 1 cup; sugar, ¼ cup; white flour, ¾ cup; salt, ½ teaspoon; eggs, 1; butter, 2 tablespoons; baking powder, 2 teaspoons. Heat the sugar into the egg and add the melted butter. Add alternately the milk and buckwheat flour, then the white flour into which the baking powder and salt have been sifted. Bake in greased gem pans.

Brown Bread.—Graham flour, 2 cups; white flour, 1 cup; molasses, ¾ cup; sweet milk, 1¾ cup; soda, ¾ teaspoon; salt, 1½ teaspoons. Sift the flour, salt and soda well. Add the molasses and the milk. Pour into well greased moulds and steam about three hours.

THE BEST BOMB-THROWERS.

Cricketers and Baseball Players Are Particularly Expert.

When it comes to bomb-throwing—a very different thing from bomb-dropping—the Englishman beats the German every time, says a London weekly.

The man who has been well accustomed to shy a cricket ball straight and true to the wicket-keeper from the out-field makes no difficulty about throwing in so as to drop it nicely on its objective—there or thereabouts. In fact, the discipline of the cricket-field has exercised a wonderful influence on the adaptability of our men. They have been accustomed to accept the ruling of the umpire without demur, and they do so in the Army.

But, as a bomb-thrower, the baseball player is likely to outshine his British ally. The throwing in baseball is an eye-opener even to seasoned cricketers, not only for its extreme sureness of direction, but for its amazing swiftness of flight and wonderful length.

A Berlin paper declares that only "dreamers" expect Germany to release Belgium. Germany is the dreamer, and her awakening will be a bitter one.

ASSAM Teas for Economy

Assam teas are the strongest and richest grown. It is of these teas that Red Rose Tea chiefly consists. That is why it yields the very large number of 250 cups to the pound—at the cost of about a cent for five cups, and every cup rich, strong, delicious tea.

Kept Good by the Sealed Package

FOOD SITUATION IN ENGLAND.

Lord Rhondda Warns the Public That High Prices Are a Necessity.

In his latest open statement to the British public, Lord Rhondda, Food Controller for England, repeats and enlarges upon the warning that the consumer cannot expect a considerable approach towards the scale of prices that existed before the war.

"The consumer should understand that he must, of necessity, pay high prices," he declares, and says that he as Food Controller can do no more than "see that supplies are forthcoming as far as they are available and that the prices are not excessive."

"My policy broadly stated," he says in his statement, "is to fix the prices of those articles of prime necessity over the supply of which I can obtain effective control at all stages from the producer down to the retailer. Such prices will, as far as possible, be fixed on the principle of allowing a reasonable pre-war profit to those engaged in the production and distribution of the particular commodity. Indeed, the policy will in effect be one of determining profits at every stage, though it will take the form of fixing prices. Every effort will be made to prevent speculation, and unnecessary middlemen will be eliminated. Existing agencies—I make a strong point of this—will be utilized for purposes of distribution under license and control, and under the supervision of local food controllers to be appointed by the local authorities.

"I am anxious that producer, seller, and consumer should realize that the action which is being taken by the Department is based on definite and carefully thought out lines, and that prices are not being interfered with in a haphazard way or without purpose. While I am primarily concerned with the protection of the consumers, I have to see that the legitimate interests of food producers and other traders are safeguarded, and above all to avoid as far as practicable action which may tend to curtail the necessary supplies.

"It is, of course, impossible that in this crisis supplies can be provided to the same extent or with such regularity as in times of peace, and the consumer should also understand that he must of necessity pay high prices. My object is to see that supplies are forthcoming as far as they are available, and that the prices are not excessive—I am glad to be able to say that the general position of our essential food supplies is satisfactory, but I cannot urge too strongly on every one the absolute need for economy in the use of all foodstuffs."

He Passed.

At a college examination a nervous-looking candidate had been instructed to write out examples of the indicative, subjunctive, potential and exclamatory moods. His efforts resulted as follows:

"I am endeavoring to pass an English examination. If I answer twenty questions, I shall pass. If I answer twelve, I may pass. God help me!"

A laugh is just like sunshine,
It freshens all the day.
It tips the peak of life with light,
And drives the clouds away.

MIXED RAGS

Your Red Cross Guild and Soldiers Comfort Funds can be substantially increased. Interesting and profitable employment for young and old. Good prices paid for mixed colored rags, sewn and made into balls, in lots of fifty pounds or more. What have you to offer? Write to-day.

NORRIS-PATTERSON, LTD., MAIL BUILDING, TORONTO

STABBING THE PUMPKIN.

A Sort of Ball Game Played by South African Natives.

A traveller tells of a primitive sort of ball game that the natives play on the steep South African hills. A green pumpkin takes the place of a ball; it is rolled instead of being thrown. The object of the sport is to stop the rolling pumpkin by transfixing it with a long, sharp stick or spear.

The men of the two teams line up alternately in a single row, and the captain of each side takes his turn in rolling the pumpkin. As the game goes on and the men shift in the line, each captain tries to favor his own side by rolling the sphere in a wide circle so that it will move away from the intervening opponent and toward his own men wherever they become grouped. There is no scoring, but a system of promotion and abasement instead. The man who misses his throw goes down one place; the man who grazes the pumpkin without stopping it holds his place; but the one who succeeds in arresting its progress advances two places in the line. The game ends when the best players have progressed to the top of the line, and the rest no longer have a chance, because the pumpkin is stopped before it reaches them.

Within the past decade a small iron hoop has taken the place of the green pumpkin. That, of course, is more economical, for it can be used the year round. It moves faster, requires greater skill on the part of those who stop it, and makes the pitcher more important. By hurling it so that one edge or the other will strike the ground first, he can throw incurves and outcurves with the ease of a professional baseball player. A favorite device when the opposing team are approaching too near is for him to send the hoop with all his force so that it will just graze their toes and then circle out to easy striking distance when it has passed the enemy.

Amaryllis make splendid window plants. Set the bulbs about half their depths in the earth in the pots and let them start growth in the window garden.

PRACTICAL FARMING

THE CARE OF THE DAIRY CALF

By W. F. Taylor

The dairy calf should be developed for the purpose for which she was born into the world. It is highly important that this purpose should be in the mind of the man who cares for her. One reason why so many men fail in the proper growing of their calves is that they do not realize their possibilities. Many calves are not worth feeding; the best feeder in the world could not make profitable cows of them. The first demand on behalf of the dairy calf is that it should be well born, but if the breeding is right, then it is deserving of good care, and the higher appreciation its owner has of its possibilities the better he is prepared to do justice by it along all possible lines of development.

Whole Milk Essential

The calf should first have whole milk. It has been proven beyond any question that no other fat in the world except that found in eggs will take the place of the fat in milk. If the milk is very rich, however, a little skim-milk may be added from the first and in any event after two or three weeks the new milk may be gradually substituted with skim-milk. It is best, however, to give a little new milk in the ration until the calf is six or eight weeks old. Many men are inclined to give too much skim-milk. There is a great difference in the amount of milk that different calves will consume with profit, but the Jersey or Guernsey calf should receive no more than eight or ten pounds per day for the first six weeks and after that the allowance should be very slowly increased with the eye of the feeder always on the calf to see that it does not get too much. Now bear in mind that the allowance of milk herein suggested is for the average calf. There may be one found now and then that will consume a good deal more and pay for it in rapid growth, but these are the exceptions. It is good practice to feed the calf three times daily until it is three weeks old. The daily allowance of milk divided into three feeds will give better results than when the little animal is fed but twice.

Starting With Hay and Grain

As soon as the calf shows a desire for roughage it should be given a little good hay, preferably clover or alfalfa. Soon after a little dry grain may be placed in a box where the calf can eat it. Sometimes calves manifest a desire for grain at first, that will lead them to eat too much of it, in which case they are apt to refuse it entirely and to give the feeder a good deal of trouble. Only a very little grain should be given the calf at first and the allowance should be increased very slowly, always being sure not to give the calf too much. Care should be used also not to feed more hay than the animal will consume in from one to two hours. The hay the calf does not eat does it no good and while it is not so bad to feed hay to excess as to feed too much grain, it is entirely useless to do so and should be avoided.

Feed Grain Dry

It is important that the calf should eat its grain dry. It is not bad practice to scald a little linseed meal and put it into the milk, providing we let it settle to the bottom of the pail and allow the calf time to eat it after drinking the milk, but it is not necessary and it consumes time that may just as well be employed in some other way. Allow the calf to drink its milk straight and eat its grain at its leisure, taking plenty of time to masticate it and the saliva will be mixed thoroughly with the grain, insuring much better digestion. When the calf becomes accustomed to the grain there is no harm in giving it all it will clean up with a relish, but until that time, comes constant care should be exercised. Almost any of the grains grown on the farm are good for a calf. There is nothing better than corn and the calf will eat it whole quite as well as in any other way. Indeed, I have seen calves shell corn from the ear, eat it and thrive as well as any calves could. If we wish to feed it in this way, there can be no objection to it whatever. Experiments demonstrated that there is great loss in the feeding of whole corn to older cattle, but the loss was very slight when the calves consumed the grain. Whole oats, too, are excellent, wheat bran and middlings are both good. In fact, as we have said, nearly all the grains grown on the farm are adapted to this purpose.

Best Roughage For Calf

By the time the calf is six weeks old, we may begin to feed ensilage, very gradually at first, using care to see that it is free from mold. In a little while the calf will be able to consume quite a quantity of ensilage and the amount will increase as time advances. The grain fed to the calf should always depend in some degree upon the kind of roughage consumed. There is no better roughage than alfalfa hay. It is easily digested. The leaves of the alfalfa seem to contain a principle indispensable in the development of the young animals and not present in other roughage, but alfalfa hay alone is not good for a calf. Taken in connection with skim-milk the ration is too narrow, that is to say, the amount of protein as related to the carbohydrates and fat is in excess of the demands of the animal. This condition is corrected by the feeding of ensilage and grain like corn, rich in carbohydrates.

Keep Claves Growing

Now these calves should be kept growing all the time. They should not be crowded like calves designed for baby beef, but they should be kept growing. They should be fed plenty of good feed in which the nutritive ration is right. If calves come in the fall, the grain may be omitted in the fore part of the summer after they are accustomed to grass pasture, but the time in which a calf changes from a winter ration composed of skim-milk, grain and ensilage roughage eaten in the shelter of a comfortable stable, to pasture grass consumed too often in wind and rain, is a critical time and the change should be made gradually. The calves should be turned out daytimes at first and sheltered at night and some grain should be fed until they are accustomed to the out-of-doors, then if the pasture is good, the grain may be omitted as we have said. The Jersey or Guernsey heifer may freshen at two years or a little older. The Holstein may well postpone the beginning of the milking period until two years and a half old.

Watch the Individual Cow

If freshening is to occur during the winter, a substantial grain ration should have been fed for some time previous. Remember, the thing we want to do is to develop this young cow so that she can yield milk in a profitable quantity. If we have fed her liberally the second winter and she has been on good pasture during the second summer, she is a beautiful animal. Now, if we wish to feed her grain about three months before she freshens and gradually increase the ration until she is consuming four or five pounds of grain per day, with ensilage and good clover, the machinery for the production of milk will have been fully developed. For a few days after freshening, we are going to be very careful with her. For three days we will give her no grain at all and then only a little, very gradually increasing the amount as the days go by. Now the quantity of grain that she will consume after the first three weeks have passed, will depend upon the amount of milk she gives. A pound of grain per day for every three or four pounds of milk produced, according to the richness of the milk, is a very good rule. Still there are many exceptions to this rule. When roughage is very cheap, and grain is expensive, it is profitable to feed an excess of roughage and a smaller ration of grain. Always watching the individual cow to see that she is not over-fed. At the same time weigh and test the milk that we may know what she is actually doing and thus be able to feed her enough to produce the milk and maintain her body.

Now, this is the theory, the success in its application will depend upon the man. The longer I live, and the more I see of dairies, the more do I value the individual man in the success of any program of development. It is a great thing to be able to develop a dairy. The man who can do it is worthy of confidence and respect.

All weak trees and evergreens will be benefited by fertilizing with well rotted stable manure.

HOW TO TRAP FURS
MORE MONEY
FOR THE FURS YOU TRAP
FUNSTEN
The largest fur house in the world tells you how we pay more. Write for our price list on Raw Furs, Coon, Muskrat, Skunk, Opossum, Fox and other furs. Trappers get big profits this year like you'll never get again. Don't sell your furs until you get our price list. Our new book will tell you how to trap, handle and ship furs to get the highest prices and biggest profits. Also gives prices on guns, traps, smokers, etc. Send for it today.
FUNSTEN BROS. & CO.

Poultry

Market Calendar.

Roasters (crate fed), young ducks, young geese, and some young turkeys should be marketed in November.

By systematic fattening is meant the periodic selection of those birds which are most mature and the apportionment of the fattening periods to meet the market requirements.

Bran and rolled oats, well soaked in milk, provide one of the cheapest of poultry feeds.

A supply of gravel for grit and sand for dusting should be secured now for use by the poultry in winter.

The flock will be in better health and more eggs will be secured if the hens are provided with some sort of green food in winter.

Plenty of fresh table scraps, liberal amounts of bran and shorts, and green feeds, should make up a large part of the diet of poultry this fall in consideration of the high cost of grains, but the scraps should not contain an excess of salt.

"Send me a ton of coal." "What size?" "Well, a two-thousand-pound ton would suit me, if that's not asking too much."

You may be deceived
some day by an imitation of
"SALADA" B114
and possibly you will not detect this imitation until the tea-pot reveals it. Demand always the genuine "Salada" in the sealed aluminum packet, and see that you get it, if you want that unique flavour of fresh, clean leaves properly prepared and packed.

The Great National Highway

By Frederick Wright, Editor of The Canadian Municipal Journal

We have for some time past been urging the building of a national highway across Canada, and we are pleased to note that our efforts are encouraged by many of our contemporaries. The special reasons we give why such a trans-continental road should be built are: First, it would find employment for our returned soldiers at a time when our industries will be dislocated and consequently the communities not able to assimilate three or four hundred thousand men. Second, it would be another practical link between one municipality and another, and one province and another. Third, it would create a tourist traffic that cannot help but be a boon to those municipalities through which the road would pass. Fourth, it would tap many of our natural resources that now lie dormant, but waiting to be developed. Fifth, it would be the best incentive to those parts of the Dominion, where a road is only a name. The Sixth, though not the last reason; for we could give many more, is that such a highway would be the best monument that the people of Canada could build in memory of those splendid sons who have given up their lives in her cause on the fields of Flanders. Such a road would be a real peace monument. The mile stones would bear witness to many thousands, who came after us that Canada had done her duty at this time of democracy's trial.

But such a national road would cost money. Our experts consider that it would take 3,500 miles of new road to link up the Pacific and the Atlantic Oceans, and would cost in round figures $76,000,000. A huge sum, but none too large for such a purpose. We have already suggested that the cost be divided into four parts, and borne by the Federal authorities; the Provincial authorities; those municipalities through which the road would pass; and by public subscriptions in the following proportions—one-half by Federal money, one-quarter by the Provinces and the municipalities, and one-quarter by public subscription. The whole of the work to be under a commission, made up principally of engineers, who should have the absolute control of the route and the manner in which the road should be built—materials, etc.—with one exception and that is that the whole of the work be done by returned soldiers under military discipline, but civilian pay.

This is a great task that we suggest to the people of Canada, and one that some might think inopportune at this time, when every dollar is required to finish the war, but we believe that we would be remiss in our duty, if we failed to remind our fellow citizens that there is the aftermath. One thing is certain, the larger part of our present industries, which are munitions, will stop. And what then? Tens of thousands of family bread-winners will be thrown out of employment, and surely it would be suicidal to increase this large army of out-of-works by another large army of out-of-works, which would really be a fact if the returned soldiers are disbanded on their arrival in Canada. What then can we do with the returned soldiers to whom we as a nation are under special moral obligation? One of the answers to our mind is to put the men in the building of such a national road as we have urged, and thus use them in a great work at once healthy and profitable to themselves and the nation.

The Sunday School

INTERNATIONAL LESSON
NOVEMBER 4.

Lesson V—Defeat Through Drunkenness (World's Temperance Sunday)—I Kings 20. 1-21
Golden Text, I Kings 20. 11.

Verses 1-11. Benhadad proposed terms of surrender. Ahab was ready to accept the first proposal (verses 2-4), but the second was so humiliating (verses 5, 6) that the king, with the full concurrence of others and people, rejected it (verses 7-9). Whereupon Benhadad threatened the complete destruction of the city, to which Ahab replied: "Let not him that girdeth on his armor, boast himself as he that putteth it off" (verses 10, 11).

12. At this point of the story the lesson text begins. The defiant message of Ahab infuriated Benhadad, who gave orders for an immediate attack upon the city. Drinking—Here, as in verse 16, the implication is that the drinking incapacitated the king for intelligent action. In his drunken condition the king would be more easily stirred up by the irritating words of Ahab. Kings—The thirty-two vassal kings aiding Benhadad against Israel (see verses 1, 16); they were the chiefs of cities or small districts subject to Damascus. Pavilions—Literally, booths, probably the group of tents, or, the camp. Set—A technical military term, meaning, to prepare for an attack, either by the formation of storming parties or by the placing of battering engines (see margin), or both.

13-15. Measures of defense. Prophet—Like Isaiah, Jeremiah, and other later prophets, this unnamed messenger of Jehovah acts as an adviser of royalty. It is worthy of note that the prophet Elijah, the outstanding figure during the reign of Ahab, does not appear. Ahab—The son of Omri, and the most prominent member of his dynasty; he was king of Israel from about B.C. 875 to about B.C. 853. It is not clear to what period of his reign the events here described belong. Jehovah—The deliverance will prove that Jehovah is in truth the God of Israel; he is the saviour of his people now as he has been in the past. Young men—The personal attendants, picked men, of the district leaders. The districts are the divisions of the kingdoms referred to in 1 Kings 4, 7ff. Begin—That is, marshal the forces for the attack.

16-21. Defeat of the Aramaeans. Noon—That is, during the intensest hot period of the day. In the Orient the middle of the day is a time of rest; hence an attack at that hour would be unexpected and, consequently, throw the enemy into confusion. Drinking—In their drunken stupor the leaders were in no condition to devise adequate plans to meet the attack. Benhadad—This name, meaning "Son of (the god) Hadad," is borne by three kings of Damascus named in the Old Testament (compare 1 Kings 15, 18; and 2 Kings 13, 24). Since Hadad was a popular deity, personal names containing his name as an element are not uncommon. Sent—The text should be changed so as to read: "And they sent and told Benhadad." The initiative was taken by the observers near the city wall. Take them alive—The arrogant boast of a drunken man who could not understand why he should not have his own way. The thought expressed in verses 19-21 seems to be that the Aramaeans gave their attention to the small band of picked men who went out of the city first. When the main army appeared, the attackers were taken by surprise and utterly defeated. Syrians—Or, "Aramaeans;" a group of Semitic tribes which settled near the upper Euphrates as early as the middle of the second millennium B. C. The Old Testament is concerned chiefly with the western Aramaeans, who had their political center in Damascus. The conflicts of the Israelites were chiefly with this western group. The modern name, "Syrians" is derived from "Syria," which has been the name of the country for centuries and millenniums.

How To Have Good Teeth.

If parents desire their children to have sound and strong teeth, they must begin to take precautions long before it is time for any teeth to appear. Babies, like the rest of us, can only build up their bodies from such material as is given them. If a baby's food is deficient in quantity or quality, that deficiency will cause defects in teeth and hair and nails, as well as a lack of bodily vigor.

The breast-fed baby has by far the best chance of having the right sort of bone substance, and therefore of having good teeth. The disease known as rickets is a form of malnutrition that interferes with the proper growth of the bones, and the presence of rickets sometimes first manifests itself by delay in the appearance of the teeth. If, therefore, a child that otherwise seems to be fairly well, does not begin to cut his teeth at the usual age, he should be taken to a physician, for probably he is not getting the proper diet.

Scurvy rickets is allied to ordinary rickets, but is less common. It is also a disease of wrong feeding, and means that the child does not have enough fresh vegetable food. It also affects the formation of the teeth by making the gums spongy and inclined to ulcerate. Fresh fruit juice, such as that of oranges, and a little mashed potato in the child's milk will work wonders with this disorder.

Absolute cleanliness of the baby's mouth and gums and of everything that he is permitted to put into his mouth is very important. Until a child is old enough to be taught to cleanse the mouth by rolling a mouth wash round in it, his mother or his nurse should make a small, clean pledget of cotton and gently but thoroughly wash the gums with a mild antiseptic tooth wash. As soon as the child can be taught to hold and to use a small toothbrush, give him one and teach him to use it every night and morning and, if possible, after each meal. The night brushing is most important of all, for germs and particles of food lodge between the teeth and have time to do much mischief during the long hours of sleep.

Sugar is bad for the teeth because sugar turns to an acid in the mouth, and that acid works on and injures the enamel coating of the teeth. It would be an excellent thing if all people, adults and children alike, were careful always to brush their teeth thoroughly and to use a mouth wash after eating candy.

Children should be taken regularly to the dentist, and a decayed temporary tooth should never be permitted to remain by the side of a permanent one, lest it infect the sound tooth.

Vegetables properly prepared tempt the appetite. When they are soggily cooked or poorly seasoned, much of them will be left on the table.

Your Problems

Conducted by Mrs. Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

Florence:—1. Florence Nightingale was an English nurse who won nation-wide fame for her unparalleled work among the soldiers in the Crimean War. She was in general superintendence of all the hospitals in Bosphorus, and had at one time 10,000 wounded under her charge. When she returned to London a fund of $250,000 was raised for her benefit. This was spent in founding a home for training nurses. Miss Nightingale was decorated by King Edward VII. and immortalized by poets. She died in 1910, at the age of ninety. 2. The population of the earth is about 1,691,751,000.

Housekeeper:—1. A little over 20 per cent. of the food matter in a can of salmon is protein or tissue-building. More than 23 per cent. of the food matter in a can of sardines is protein. Both of these fish canned contain 12 per cent. fat. 2. Probably the following table will be of value to you. It might be pasted on a card and hung in the kitchen.

4 quarts make a gallon.
8 quarts make a peck.
4 saltspoonfuls of liquid make one teaspoonful.
4 teaspoonfuls of liquid make one tablespoonful.
4 tablespoonfuls of liquid make a quarter of a cup.
3 teaspoonfuls of dry material make a tablespoonful.
16 level teaspoonfuls of dry material make a cupful.
8 heaping tablespoonfuls of dry material make a cupful.
2 cups or 4 gills make a pint.
4 cups of liquid make a pound.
4 cups of flour make a pound or a quart.
2 cups of solid butter make a pound. Butter the size of an egg equals 2 ounces or ¼ cupful. One heaping tablespoonful the same.
2 cups of granulated sugar make a pound.
2½ cups of powdered sugar make a pound.
3 cups of meal make a pound.
1 pint of milk or water equals a pound.
16 ounces make a pound.

Soldier's Sister:—1. There are many things to choose for your brother besides the knitted things or the comfort bag. For instance, an electric flash-light, a khaki air pillow, a pair of military hairbrushes or a trench mirror for shaving. 2. The best remedy for sore throat is hot water. It should be applied outside and inside; outside, by means of fomentations for fifteen minutes or half an hour twice a day; inside, by a gargle of hot water, as hot as can be used, from fifteen minutes to half an hour until relieved. Drink plenty of hot water, in order to induce profuse perspiration. If there is fever cool the skin with sponge baths. Keeps the feet warm. If the symptoms are severe apply foe in a bag to the outside of the neck and give the patient little pieces of ice to swallow. A few hours of this treatment will effect a cure in simple cases. The inhaling of steam is a most efficient means of relieving pain and inflammation. The application of oils and grease of all kinds to the throat is useless notwithstanding the popular opinion.

Bedtime Stories

Dannie's Gum.

The afternoon session was nearly over when Miss Stuart, the teacher, saw that Dannie Luce was chewing gum again.

"Dannie Luce!" she exclaimed. "Take out that gum this instant!"

Dannie promptly obeyed. He looked and felt very sheepish as he did so, for all the other pupils smiled, and some of them giggled aloud. But he did not throw the gum into the waste-basket. He tucked it carefully into a pocket for use after school.

When the closing bell finally rang, most of the pupils promptly hurried homeward. Three or four boys—Dannie among them—were slower in starting than the others, and they were lingering near the door when Miss Stuart came out. She had an errand to do and was in a hurry to catch a car on the avenue near by. As she came down the steps she took a coin from her purse; but she was in such a hurry that the coin slipped from her hand and rolled through a grating in the sidewalk.

Miss Stuart gave a little cry. "That was all the money I had with me," she said, "and I must go downtown! Will one of you boys lend me five cents till to-morrow?"

All the boys felt eagerly in their pockets. Their hands brought out almost everything except money.

While the others were hunting for money, Dannie had run to the grating and was on his knees, peering down through it. Then he jumped up, and his eyes were shining.

"I see it, Miss Stuart," he cried, "and I can get it, too! I've thought of a way!"

He ran back into the schoolhouse and brought out a long pointer from one of the blackboards. And what do you suppose he did next? Miss Stuart opened her eyes wide, as she watched him. He took from his pocket the forbidden piece of gum, set it in his mouth and stuck it on the small end of the pointer. Then he lay flat on the iron grating and pushed the pointer, with the gum on the end of it, far down into the hole below. An instant later he pulled the pointer carefully back again—and there was Miss Stuarts' coin sticking to the gum.

How they all applauded, and laughed, too, and Miss Stuart loudest of all, as she thanked Dannie and praised him for his quick wit.

But Dannie could not help saying, "And now you see, Miss Stuart, how lucky it is for you that I chew gum!"

"Yes," laughed the teacher as she started toward the avenue, "but in school hours keep it in your pocket where it will be handy for such uses as this."

Horse Sense

More Veterinary Notes.

"Quidding" of hay, or pain (toothache), shown by holding the head to one side when drinking cold water or chewing feed, slobbering, or foul smell from the mouth, usually indicates a split or decayed back tooth. It should be pulled with forceps, or punched down into the mouth through a hole made in the bone of the face above the root of the tooth by means of a bone augur (trephine). Persistent discharge from one nostril, with or without bulging of the bones of the face below the eyes, often is due to a diseased molar tooth which must be removed.

When the front teeth greatly overlap the lower teeth, causing "parrot mouth," the horse can not graze properly. Correct this, in curable cases, by notching deeply with a sharp file-angle file across the front of the upper teeth at the proper height; then nip off the over-lapping portions by means of strong, sharp pinchers, and file smooth.

The lower jaw, on the floor of the mouth (bar) between the first incisor and the first molar tooth, may be injured by the bit in young or hard-mouthed horses. The jaw-bone may be chipped or splintered by the bit. A raw sore forms and gathers food and decaying saliva, which soon gives off a foul odor. Probing of the wound discovers exposed diseased bone which flakes off (exfoliates) and should be removed. This is best done by means of a bone scoop or bone forceps in ten to fourteen days from the time of discovery.

A discharging sore (fistula) may form under the jaw on the edge of the bone. The diseased bone, due to fracture, must be removed, else healing will not take place. Cleanse the sore in the mouth and the external sore and pipe (sinus) by syringing with a two per cent. solution of permanganate of potash twice daily, and swab with tincture of iodine on alternate days until healed. Allow soft feed. Use a rubber or leather-covered straight bar bit. Do not use an overhead check. Similar discharging sinuses, farther back, are often due to diseased lower molar teeth which must be extracted. Fistula of the salivary duct is located near by.

TWELFTH CON BRUCE

Fall ploughing is the order of the day.

Mrs Brackenbank of Walkerton visited her friend Mrs Alex (Ex Reeve), McGillivray for a few days.

Mrs Millan has gone to Harriston to visit her daughters.

Mr and Mrs Alex McLeod attended the recital of the latter's cousin, Miss Mary Davidson, of Saugeen on Thursday.

Mr Bert and Miss Ellen Dunlop had a business trip to Owen Sound last week.

Miss Annie McGillivray of Toronto is visiting her friend Miss Esther McGillivray.

Mrs Donald McGillivray was called to Port Elgin to see her sister who is very low at present.

Mr and Mrs Harvey Neilly attended the shooting match on Thursday in Greenock.

The Union Sunday school held in the red school house was closed Sunday last, for the winter months. There was a very good attendance. Rev and Mrs Creighton, Misses K McKenzie, Miss M Stanley and Mr F Kennedy of Paisley were present. Rev Creighton delivered a very nice address. Solos were sung by Miss M Stanley and Mrs John A Howe.

Mr and Mrs George Gilchrist were visitors at John Cumming's last week.

PINKERTON

The marriage of Mr Wm Garland to Miss Mary Downey of Tiverton was solemnized on Saturday last. The happy couple left on the afternoon train for Toronto and on their return will reside on the groom's fine farm near the village.

Mr and Mrs Albert Fisher, who have been visiting at Mr T Birrell's, returned to their home in Pontiac, Mich.

The Sacrament of Lord's Supper will be dispensed in the Presbyterian church here on Sunday next. Preparatory service will be conducted by the Rev Mr Storey of Cargill, on Friday.

Despite the disagreeable climatic conditions, a large number attended the W. M S Thankoffering on Friday evening. Mr Cole gave an interesting lecture on Missions and a splendid musical programme was given.

Mr Tom Garland of Toronto attended his brother's wedding on Saturday.

Miss Alma Rieder was called to Paisley on Saturday to attend Mrs Malloch who is seriously ill.

Mr Joe Anstead returned from the West last week and has resumed his business in the village.

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Office help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places and they need training.

NORTHERN Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circulars free on application.

C. A. FLEMING, F.C.A., Prin.

Had Terrible Pains in Kidneys and Back.

Dear Mr. Editor—I want to write you about "Anuric." I was very sick, could hardly be up; I was in bed most of the time. Had terrible pains in my kidneys and back, so much so that I had to scream sometimes when I was sitting down and wanted to get up, the pain was so great. I had tried a well-known kidney medicine but it didn't help me. I heard of Dr. Pierce's Anuric Tablets so I thought I would try them. I took only one box of the Tablets, and my back is now free from pain and I can work and take care of my family. I feel I cannot say enough for this medicine. Sincerely, Mrs. Wm. Keller.

Note: This "Anuric" is adapted especially for kidney complaints and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine and urinary troubles. The physicians and specialists at Dr. Pierce's great Institution, at Buffalo, N. Y., have thoroughly tested this prescription and have been with one accord successful in eradicating these troubles, and in most cases absolutely curing the diseased kidneys.

Patients having once used "Anuric" at Dr. Pierce's Invalids' Hotel, have repeatedly sent back for more. Such a demand has been created that Dr. Pierce has decided to put "Anuric" in the drug stores of this country, in a ready-to-use form. If not obtainable send one dime by mail to Dr. Pierce for trial package or 60 cents for full treatment.

Dr. Pierce's Golden Medical Discovery is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to make rich, red blood, which feeds the heart, nerves, brain and organs of the body. You feel clean, strong and strenuous.

HIS HEART BADLY AFFECTED

"Fruit-a-tives" Soon Relieved This Dangerous Condition

633 Gerrard St. East, Toronto.—"For two years, I was a victim of Acute Indigestion and Gas In The Stomach. It afterwards *attacked my Heart* and I had pains all over my body, so that I could hardly move around. I tried all kinds of Medicine but none of them did me any good. At last, I decided to try "Fruit-a-tives". I bought the first box last June, and now I am well, *after using only three boxes.* I recommend "Fruit-a-tives" to anyone suffering from Indigestion".

FRED J. CAVEEN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Rubbers

All kinds, and to fit all shapes of shoes for Men, Women and Children

F. CARTER & SON

Bring us your Butter Eggs and Poultry

ELORA ROAD NORTH

Mr J S Campbell arrived home from the west last week bringing a large herd of cattle with him.

We are pleased to hear that Mr Andrew Miller our former citizen is now connected with Paisley by the Bell phone.

Miss Lillie McDougall is visiting at Lucknow.

Mr George Morton of Tara is visiting Elderslie friends.

Sometimes by the light of the moon we can see one of our Elora Road boys driving his dappled grey steed in a northerly direction. There is nothing like an occasional trip of this kind to break the monotony of farm life.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

GLAMIS

Miss Kate McKinnon, who has been visiting at her home on the 10th, left on Tuesday for Chicago.

Mrs Donald Gilchrist, of Detroit, is visiting at her home on the 2nd.

Miss Sarah McKenzie, who spent some time at her brother's, returned to Markdale.

Mr and Mrs D B McDonald and the former's mother, of Tiverton, motored up on Sunday and spent the day at Mr and Mrs Joe Ferris'.

Mr and Mrs Stocks and two sons, and Miss Grey, of Port Huron, Mich, motored up and spent a few days at the home of Mrs Stocks' brother, Mr R J Nesbitt.

The Free Methodists will hold their quarterly meetings on Friday, Saturday and Sunday. Rev Mr Eagle, of Hamilton, will conduct the services.

There will be a Bible Society meeting in the Free Methodist church on Thursday night.

Mr John A McKenzie, of Kincardine, was a caller in our burg last week.

Mr and Mrs Geo Chartreau, of Riversdale, Sundayed at Mrs Catherine McKinnon's on the 10th of Kincardine.

The Red Cross Society will meet on Friday night to pack boxes for the boys from around here who are overseas. Those who are interested will notice that the date has been changed from Thursday night to Friday on account of the Bible Society meeting being held that night.

The beef ring is closed now for the season. All interested met at Mr Kirkstown's for the final settlement on Monday night.

The sum of $300 was raised in Glamis and vicinity for the British Red Cross.

Several of our young men went to Waghorn and Owen Sound for their medical examination last week.

An accident that might have proved serious happened down the boundary on Monday. Geo Groves, Sidney Johnston and Mr Ian McLennan were riding in a buggy when the hold-back of the harness broke, throwing the buggy forward on the horse causing it to kick. Sidney was struck on the chest, Mr McLennan on the wrist and George also received a mark. They escaped well, considering the way the rig was smashed.

Why does Canada Raise Money by Selling Bonds?

BONDS are issued payable in ten or twenty years, as the case may be. It means that repayment of the money will be spread over ten or twenty years instead of being raised by taxation to meet current expenditures.

To raise by taxation all the money as fast as it is needed to carry on Canada's share in winning the war, would be an unbearable burden upon the people.

It would mean that more than a million dollars a day would have to be raised right now.

But to raise money by selling Canada's Victory Bonds means that those of the next generation who will benefit by the sacrifices this generation is making;

—who will share in the freedom this generation is fighting for and largely paying for—will also pay their share.

* * *

And when you buy Canada's Victory Bonds you make a first-class business investment in a security that is absolutely safe, likely to enhance in value after the war, and bearing a good rate of interest.

You help the country by keeping open the British market for Canadian products and this helps the general welfare in which you share.

* * *

And again, every Canadian who buys a Victory Bond becomes a financial partner or backer of Canada in the war.

When you buy a Canada Victory Bond you give a personal pledge that you are going to help to win the war.

Every man and woman in Canada can help to win the war by buying Canada's Victory Bonds. And Canada wants the personal, individual interest and co-operation of every man and woman in the country.

The buying of Victory Bonds by the whole people unites them in a determination to win the war.

Every purchase of Canada's Victory Bonds is a blow for freedom against the tyranny of German Kultur.

Every bond sold is a new guarantee that Canada is in the war to the finish, until victory is with the Allies and the world has been made safe to live in.

Every bond you buy is a new pledge that Canada will remain true to herself, the Empire, the Allies and to freedom's cause.

So it is both patriotic and good business to

Buy Canada's Victory Bonds

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.

MAXWELL

Nine Miles on a Gallon

Most Miles on Tires

$1045

F. O. B. WINDSOR

There are visions—now and then—in business and industry.

The Maxwell motor car is a wonderful vision that has been made real.

The fixed purpose of the Maxwell builders was in the beginning, and is now, to produce a car which would be, in the highest sense, efficient, durable, economical, comfortable and standard in equipment.

Many years experience in production on a vast scale has taught the Maxwell manufacturers two things.

One is that such a car as they have always made their aim—a car in which efficiency, durability, economy, comfort, beauty and standard equipment are all present—cannot be built for less than $1045 with materials at their present prices.

The other lesson is that, for more than $1045, they could not give you anything more than the Maxwell now has—except greater size or luxuries, pure and simple.

In other words they are convinced—and they have convinced us—that they have found the great MIDDLE LINE where you get dollar for dollar in ABSOLUTE-VALUE.

D. A. LYON, Agent, Paisley

W. H. DAVISON

SECOND CON ELDERSLIE

Wonder who is the proudest dad, Harry or Geordie.

Murdoch Campbell, who was seriously injured by a fall about three weeks ago, is recovering slowly.

Born—On Oct 16th, to Mr and Mrs Geo Hope, a son.

Born—On Oct 27th, to Mr and Mrs Henry Priebe, a son.

Mr and Mrs Alex Campbell moved into their commodious new dwelling last week. It is second to none on this con. and their many friends here wish that they may both long be spared to enjoy its comforts.

Mrs C Smellie has been laid up for the last few days.

Threshing is the order of the day now. There are two machines busy on this con.

D Walks and Jas Henderson are both adding to the improvements of their farms of smoking artesian wells.

Mr and Mrs A Lillico received word last week from their son, Pte Arch Lillico, of the 54th Batt, who is now on leave for a couple of weeks in Scotland. Pte Lillico was gassed on May 4th, and has not recovered enough as yet to go back to service, but expects to train at Witley Camp soon.

A prayer meeting will be held on Thursday night next in Manley's school.

Alex McGregor had the misfortune to lose a working horse from lockjaw.

Grandpa McDonald feels almost six foot in his socks these days. In fact, he would almost like to aspire to the position held by the veteran John A. As he rocks the cradle and sings a soft lullaby he forgets all the wonderful acts of the Conservatives and all the blunders of the Liberal party. A new era is dawning upon him, and in the distance he imagines he sees a seat in the new Parliament building at Ottawa filled by his grandson as member for Bruce.

AUCTION SALE

—OF—

Farm Stock and Implements

The undersigned has received instructions from HENRY FARRER Lot 10, Con. 6, Brant, to offer for sale by public auction on his premises, on

Wednesday Nov. 7th

commencing at 1 o'Clock p.m. the following:

CATTLE—1 cow 10 yrs old, 1 new 7 yrs old due April 15th, 1 Hereford cow 7 yrs old, due June 5th; 1 cow 6 yrs old, due Nov 1st; 1 cow 5 yrs old with calf at foot, 1 Hereford heifer 2 yrs old, 2 yearling heifers, 2 yearling steers, 2 calves 4 months old. A number of these cattle are pure-bred Hereford—registered. HORSES—1 aged Clyde mare, 10 yrs—3 more pure about 4 year old. POULTRY—About 40 hens.

Terms—All sums of $10 and under, cash. Over that amount 12 months' credit will be given on furnishing approved joint notes or 5 per cent discount off for cash on credit amounts. All will be sold without reserve, as the proprietor is giving up farming.

H. C. PEARCE, Auct.

Tax Sale of Lands

NOTICE is hereby given as directed by the Assessment Act, R.S.O. 1914, Sec. 135, that a sale of lands for arrears of taxes will be held at the hour of 12 o'clock noon, at the Council Chamber in the Township Building, in the town of Walkerton, on Friday, the 23rd day of November, A.D. 1917, unless taxes will be collected for sale by public auction the taxes and charges are endorsed, and the following described lands in the Township of Greenock, viz: Part of lot 25, Kloy St., Plateau, being that part of said lot conveyed in instrument registered in the Registry Office of the County of Bruce as No. 13 Greenock.

A complete list of lands to be sold for taxes is published in the issue of the "Ontario Gazette" of [illegible] inclusive, and in the "Hepworth Promoter" July 5th to October 25th inclusive, 1917, a copy of which may be obtained on application from the undersigned.

If it be required to hold an adjourned sale it will be held on Friday, November 30th next, at the above mentioned place and hour.

NORMAN ROBERTSON, Treas. Co Bruce

—There were 6,450 claims for exemption filed with the registrar of Military District No 1 at London up to Wednesday last. Only 26 of these were ready to serve. All others applied for exemption.

"Everybody Welcome

Cormack—Bell

A pretty wedding took place at the residence of Mr and Mrs Josh Bell, in the town plot east of the village, when their eldest daughter, Della, became the bride of Harold Cormack, only son of Mr and Mrs Andrew Cormack, Elora road south. The ceremony was performed by the pastor of the Methodist Church, Rev A J Crighton, in the presence of a small company of immediate relatives. The rooms were bright with lovely chrysanthemums. The wedding march was played by the bride's sister, Miss Hettie Bell. The bride who was given away in marriage by her father, looked charming in a wedding gown of white crepe de chine with pearl trimmings and carried a bouquet of white roses. After a dainty luncheon, the bridal couple left on a short honeymoon trip to Toronto and other points. On their return they will reside on the Cormack homestead. Mrs Cormack travelled in a smart tailored navy blue suit with hat of midnight blue.

—Comfortable room wanted in central part of town for lodging for one person. Require at Advocate office

—FOR SALE—Two brood mares due to foal in May, 1 good yearling and 2 spring colts, all agricultural horses. Will sell reasonable. D A Lyon, Paisley, or Geo McTeer, 20th Greenock.

—During the year 1918 the Farmers Son promises to be more profitable and interesting to those engaged in agriculture than at any time during the past twenty-six years of its products. "Notes and Views from the Farm" by W [illegible] for twenty years one of The Sun's editors, will continue this most pleasing and profitable part of the paper. The farm markets will be given extra and special attention by Mr Crane and Mr Thurston, while many others will contribute, from week to week, topics of interest to those actively engaged in farm work. One Dollar to 1st January, 1919, is a small price for The Sun, a paper that has so long and faithfully served the farming interests. You cannot do better than subscribe at once.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

A Successful Shower

133 pairs of socks and 16 trench towels were donated on Oct 29th to the W P L sock shower. The League wishes to thank the township ladies who contributed.

A CITY ON WHEELS

By Olive Melville Parsons.

(Copyright, by W. G. Chapman.)

"Too bad!" uttered Pierre Maclay and stood regarding an untoward mishap in dismay.

A find wheel had come off the light wagon he had been driving. The whole body of the vehicle seemed jarred out of place and as the box landed in a rut he saw that he was not enough of a mechanic to adjust the difficulty.

"Pretty nearly the wilderness," he soliloquized, "and something better than thirty miles to Malden. Back the route to Warrenton it's an equal thirty. What am I to do?"

Maclay removed the horse, tethered him and set at work to remedy affairs. In a very few moments, after a close inspection of the vehicle, he declared dubiously:

"I give it up. No tools, no blacksmith within reach, I'll have to abandon the wagon and do the rest of the journey on horseback."

He stood ruefully summing up the situation, his hands thrust deep in his coat pockets, when he started at the sound of an unexpected voice, clear as a bell, musical and friendly. It revived his drooping spirits magically quick.

"In trouble, stranger?"

Over the soft grassy trail a great covered wagon had come noiselessly upon him. Occupying its front seat, clad in sensible khaki costume, was a young girl with a rosebud face, bright eyes clear as crystal and fearlessness and human interest in her entire manner as she halted a great staunch span of horses.

"I declare!" involuntarily exclaimed Maclay—"this is a pleasant surprise. I was getting gruesome in my forlorn position and you can probably tell me exactly where I am marooned."

The girl sprang down nimbly from the wagon seat. She advanced to the wreck and viewed it with a practical searching eye. Her hand was small but sinewy. She pulled aside the dropped axle with a strength and celerity that was amazing. She looked over the wrenched hub of the wheel critically.

"If you care to carry the tools from our wagon," she observed, "I think I can soon mend things somewhat."

Maclay stared, marveled, but followed her with a polite bow. She went around to the end of the big wagon she had driven and opened a door. Maclay was further bewildered. The capacious space within was fitted up like a room. It had bunks at the side, a folding table, stools hinged to its side, an oil stove and a wardrobe. His fair companion opened a heavy box. She took from it a portable jack, several other tools and some pieces of metal. She handed them to Maclay. Then, armed with a hammer, she led the way back to his broken vehicle.

Ruefully Summing Up The Situation.

"Now, then," she remarked in a brisk businesslike way, "you try and lift the end of the wagon box while I set the wreck under it."

She had rolled up the sleeves of the jacket she wore. She pushed back fugitive golden ringlets under the close cap she wore. The air rang with the true rapid strokes which she delivered upon the bent axle. She replaced the cracked hub iron with a new one. She tightened up dislocated odds and ends. She worked like a beaver—and also as an expert.

"There! that will last you till you reach a better workman," she observed, in a satisfied tone and with a pleasant smile.

"A better workman!" cried Maclay spontaneously. "Why, you are a wonder! Are you some good fairy, devoting your admirable energies toward succording the unfortunate in distress?"

A ringing laugh greeted the fanciful words. The bright eyes half mischievously, half triumphantly glowing youth and beauty and comradeship into his own, made Pierce Maclay glad for the breakdown.

"Oh, dear, no!" declared the girl. "I am only plain Laura Wooster. We all have learned to work down at our place—or did," and the sweet face shadowed.

"Your home"—began Maclay.

"We have no home," came the speedy interrupting response. "We are seeking one now."

"We?" insinuated Maclay.

"Yes, eighty of us. I am afraid you do not understand. There are nineteen other wagons. They will be along soon. You see, my father is Robert Wooster. He built the wagon plant at Chester, put in all his money and brought all our eastern neighbors out here—a happy family. Last week the plant burned down. Father could get no insurance way out here away from fire protection. All we saved was some wagons. We knew enough to make comfortable houses of them just like this one. Father feels a moral responsibility in caring for his workers. So, we are tramping, as you may call it, till we find just the place where they will encourage a willing industrious group like us to locate and help build up the community."

"Eighty of you?" spoke Maclay, with new animation. "Why, that is just what I am looking for. Dear young lady, I must see this enterprising father of yours."

"He and the others will soon be along," replied Miss Wooster. "I drove ahead to sort of blaze the way. There is the first of the wagons now. There is father. Yoo-hoo!" and the young sprightly voice rang out in a mellow hail. Maclay drew aside as several vehicles came into view. They all halted. It was near the noon hour. In a few minutes Miss Wooster approached Maclay with a sun-browned sensible looking man.

"Father," she introduced, "this is the young man I spoke to you about. He said a strange thing that may be interesting to us. Anyhow, we must show him what a good dinner we strollers know how to enjoy."

"Your daughter has explained your situation," spoke Maclay at once. I hope our accidental meeting is as fortuitous as I have hoped. I come from Warrenton and I was on my way to Malden to try and induce the furniture factory there to remove to our town. The employees number only twenty, though. We have a big vacant building at Warrenton. In fact, I own it. We need new industries and we are disposed to encourage and finance them.

"That looks pretty attractive to me," spoke Mr. Wooster.

"The main reason just now is that, if we can get a working factory and fifty or more new residents, the county seat choice will fall on Warrenton."

"We make a pretty thrifty city on wheels," said Mr. Wooster. "The prospect looks decidedly favorable. I should like to consider it."

Warrenton stared hard when "the city on wheels" came rolling into the public square. Pierce Maclay trundling them. Warrenton hurrahed enthusiastically, when it was known that the new contingent increased the population of the little struggling burg to a point that awarded it a selection as the county metropolis.

Some of the machinery back at the burned out town was found in condition for utilization. Young Maclay secured the capital co-operation of the local bank and the well-to-do citizens. His own pleasant share was to build some twenty neat cottages for the workers.

In the course of a year his construction views expanded. This time it was a more pretentious house that he planned.

For it was to be a real home, and its mistress was the bright energetic girl who had brought to him "the city on wheels."

INVALID SOLDIERS' LEAGUE.

Convalescent Soldiers at Edmonton Form Model Organization

The Invalid Soldiers' Welfare League is a newly formed organization in the Edmonton Convalescent Home which promises to become a model for similar leagues in all the convalescent homes of the Military Hospitals Commission.

There are many phases of life to be carried on in the homes, and the patients here hit upon the idea of forming an organization which would provide machinery for promoting athletics, social life and maintaining a canteen, as well as a bond of interest common to all the men in the home.

The membership is constantly changing, of course, as cases are discharged and new ones come in, but every man while he stays belongs to the league. The aim is simple—"For the welfare of the men in the convalescent home and hospital"—and the appeal is direct. The returned Tommies like the idea.

There are three chief committees; one is in charge of athletics and arranges games, field days, and all sports; the social committee has charge of all the picnics, concerts and movies; and the canteen committee of the smokes, refreshments, etc.

The supreme proof of its usefulness comes when it lends money, to the amount of $100, to any man going out into civil life needing a lift, if he can give proper security, and every dollar loaned to date has been repaid.

This is a boon to the man who lived on a salary before he enlisted and whose family used up his small savings in his absence.

In the Edmonton Fair the boys cleared $2,000 on a show they staged. Each man who worked was paid $2 a day; and ten per cent. of the profits were turned over, as is their custom, to the widows and orphans fund of the Great War Veterans.

GAY HALLOWE'EN.

Among the wigwam shocks of corn,
I met the crisp October morn.
With pumpkins high I piled my load
And thought of children as I rode.
I saw instead of yellow piles,
A wagon-load of saw-tooth smiles,
With glowing eyes and fearsome flare,
And candles gleaming everywhere.
I saw a laughing, motley crowd,
With Jacks held high and shouting loud.
I heard the calls of girls and boys,
And smiled at thought of coming joys.
The jolliest crop of all the year,—
Gay Hallowe'en at last is here!

PROTECT CROP SAVERS.

Our Insectivorous Birds Should Not Be Slaughtered.

On September 10, scare heads in the newspapers announced that frost had caused damage in the United States to the extent of probably $50,000,000, the grain markets became excited, and prices advanced. Why? Because it was unusual.

Every year in the—United States, $800,000,000 loss occurs through the depredations of insects. This is a conservative estimate, made by experts. Such an announcement, however, creates no interest either in the grain market or newspapers. Canada suffers proportionately. It but another of the enormous wastes which we are content to put up with, as we do with the heavy fire waste, and feel that, with our bountiful harvests and rich natural resources, we can afford to be extravagant.

If some means existed to overcome early frosts, no time would be lost in putting them into effect. Not so, however, with the continued loss by insects. Our insectivorous birds, far from receiving protection, have been promiscuously and continuously slaughtered, to the detriment of our field crops.

Canada and the United States have recently passed enabling acts giving effect to the Migratory Bird Treaty for the protection of insectivorous birds. To many this protection is looked upon as a curtailment of liberty. In reality, however, it is a means of putting money into each citizen's pocket, and everyone, both by example and influence, should do everything possible to protect our feathered friends.

Dairying with hogs on the side is now, and is likely to be for some time, one of the most profitable lines in Ontario farming.

About the House

DOMESTIC SCIENCE AT HOME

Fifteenth Lesson—Rye, Graham and Health Breads.

Nature provided man with grains containing valuable nutriment necessary to maintain life. Man, craving luxury, discovered a process of milling or refining the meal which is made from the grains. By grinding grain into white flour, which is a process of refining, much of the vital element is removed.

The vitamines and mineral elements so very necessary for human structure of teeth and bones and bodily welfare are lost.

The human body requires sixteen elements for its daily well-being. These elements are found in mother nature, the earth, the grains and the vegetables. The loss of any one of these plays havoc with the body; by discarding several more, their loss is plainly seen.

Now is the acceptable time to return to the foods of our grandidads, namely, to eat whole meals. Bread made from whole wheat forms an ideal ration; it furnishes protein, carbohydrates, some fats and mineral salts, and a portion of the bulk that has an point that awarded it a selection as the county metropolis.

The absorbent qualities of whole wheat make it necessary to lessen the flour when making bread.

Rye flour contains slightly less gluten than wheat flour; this gluten is of a tough character. A portion of wheat flour is necessary to produce a good loaf. In many parts of Europe it is the necessary staff of life, and is known as black bread. In the old country the bread is frequently baked in batches sufficiently large enough to last a family from six to eight or from eight to ten weeks.

Graham flour is flour made from whole wheat. The outer coat and some of the bran are removed. It finds favor with many persons who dislike entire wheat bread.

Gluten bread is made from wholewheat flour. The starch is removed by washing. The residue is then dried and is finally prepared into flour. It is used in special cases of diabetes, kidney, liver and intestinal troubles.

Whole-Wheat Bread

Two cups of water, one tablespoonful of sugar, one teaspoonfuls of salt, two tablespoonfuls of shortening, one yeast cake, five cupfuls of wholewheat flour. Dissolve the sugar and shortening in boiling water. Cool to eighty degrees Fahrenheit, then add the salt, yeast cake and flour. Knead for fifteen minutes. Put in greased bowl to rise for three hours, in a warm place, free from all drafts, about eighty degrees Fahrenheit in temperature. Now mold into two loaves. Place in well-greased pans and return to place to rise for one hour. Bake in an oven of 325 degrees Fahrenheit for fifty minutes. Remove from oven. Brush the tops of bread with melted butter, then lay on a rack to cool.

Rye Bread

Two and one-half cupfuls of water, two medium-sized potatoes. Peel the potatoes, then cut in thin slices and boil until soft. Rub through fine sieve. Now cool to eighty degrees Fahrenheit. This amount should measure two cupfuls. Place in a bowl and add: two tablespoonfuls of sugar, two teaspoonfuls of salt, two tablespoonfuls of melted shortening, one yeast cake, two cupfuls of white flour, one and one-half cupfuls of cornmeal. Place the ingredients in bowl in the order given. Beat well, to mix. Set sponge to rise for one and a half hours in a place about eighty degrees Fahrenheit. Then add three cupfuls of rye flour. Knead well for fifteen minutes. Return to place and let rise for two hours. Mold into loaves and let rise for forty-five minutes. Bake in a moderate oven for fifty minutes. Caraway seeds may be added if desired.

Gluten Bread

One cupful of water, eighty degrees Fahrenheit, one tablespoonful of sugar, one teaspoonful of salt, one-half of yeast cake. Mix in the order given. Crumble in the yeast cake and add sufficient gluten flour to form a thick batter that will drop from the spoon. Beat well for ten minutes, then set to place of eighty degrees Fahrenheit for one and one-half hours. Beat for five minutes with spoon. Pour in well-greased pans. Set to rise for one and one-quarter hours. Bake in hot oven, 350 degrees Fahrenheit, for forty minutes, reducing the heat to 300 degrees during the last twenty minutes.

Milk may be used in place of water in the above recipes.

In northern Europe barley flour is used in making bread. Try using one and one-half cupfuls of barley flour in place of all-white flour. The bread has a delicious nutty flavor and is particularly healthful bread for children. If unable to obtain the barley flour or meal, use the cream of barley cereal; first cook it into a stiff mush. Add two cupfuls of this to the bread sponge.

How To Save The Fats.

Frying foods on the menu will require much care and forethought to have it properly balanced, if one is to keep down expenses and eliminate waste.

Fats, at this season of the year, are among the most valuable food units. They furnish heat and energy to the body. But fats are also scarce in the markets and cost the housewife a proportionally high price.

Ways to Utilize

Carefully trim off all pieces of fat that accompany meat. Cut fat into small pieces or put it through the food chopper. Place in a saucepan containing sufficient cold water to cover and cook slowly until the fat, when pressed in a sieve, will yield no moisture. Strain and stand the liquid aside to cool. When cold remove the cake of hard white fat on top. This fat may be used in place of butter for cake and cooky making and also for frying. Beef fat may be combined with other fats in proportion of one part of beef fat to one part each of mutton and pork. Melt it and then strain. This can be used for trying, etc.

Do not waste a single bit of fat. Personally exercise the food before it is stirred away. Remove all the surplus fat. Persistently drain all fat from the pans used for sauteing (frying). Use a spatula to remove it as much as possible.

Set aside the saucepan and kettle containing the water in which meats were cooked. Let the water cool and then remove all the fat. Clarify it by placing it in a saucepan containing an equal amount of water and one-quarter teaspoonful of bicarbonate of soda. Let this come to a boil. Boil for five minutes and then strain and cook. Lift the cake of fat from the water and put it in a cool place until needed. This fat may be used for pastry, cookies and frying.

Eliminate the use of butter in sauce. Butter is a fat that is not suitable for cooking purposes. This is because the butter, when heated to a temperature that will cook food, burns, thus setting up a decomposition in the fatty particles, which renders it unfit for food purposes, and if it is used it will frequently products intestinal disturbances.

Butter is not necessary in the making of sauces. In July, 1914, the Culinary Society of Paris decided that it would be a wholesome economy and a scientific advancement to prepare all cream sauces without the use of butter.

In order to thoroughly explain this method, it will first be necessary to classify cream sauces as follows:

Thin cream sauce, such as is used in cream soups, purees, au gratins, etc.

Medium cream sauce, such as is used for vegetables, fancy sauces, etc.

Heavy cream sauce, such as is used for molds, cutlets, etc.

The Proportions

It should not be necessary for the housewife to turn to a cook book or a recipe each time that she wishes to prepare a sauce, if she will place this recipe on her kitchen cabinet door, next to the flour bin.

One and one-half level tablespoonfuls of flour for thin cream sauce.

Two and one-half level teaspoonfuls of flour for medium cream sauce.

Five level tablespoonfuls of flour for heavy cream sauce.

To each half-pint cupful of milk or water.

How to Prepare the Sauce

Use a saucepan that is absolutely clean for making sauces. The outside of the pan is as important as is the inside, for if dust or scorch marks are apparent on the outer surface of the pan this will have a tendency to scorch the milk, when large quantities are cooked.

Place the flour and cold milk in the saucepan and now take a wire beater or egg whip and beat the milk and flour smooth. Place on the fire and bring quickly to the boiling point, beating hard all the time that the sauce is cooking. Cook for three minutes after the boiling point is reached at a very low temperature; that is, if using the gas, turn it off and let the sauce cook on the hot burner for this length of time.

Now the constant beating has blended the flour and milk into a rich creamy sauce that would be impossible to obtain under the old method of using butter, flour and milk, and then just stirring it until cooked. Remember that the secret is the constant beating.

Try this method and eliminate all the fats from sauces and gravies. By this you are doing your bit in helping to conserve the food element, which is important to our nation as are our soldiers, our sailors and our guns.

Old Tea Looks All Right

Old tea and fresh tea, poor tea and good tea, all look alike. No wonder a woman often gets a bulk tea she doesn't like.

Red Rose Tea in the sealed package is always fresh, always good, always worth the price on the label.

Kept Good by the Sealed Package

DREAM UNFULFILLED.

Though Germany Has Gained Much She Has Lost Still More.

Three years ago Germany began this war for the conquest of Middle Europe. What has she gained? What has this gain cost her?

She has gained by her arms the territories of Belgium, Luxemberg, Serbia, a small but rich section of northern France and parts of Lithuania, Poland and Rumania—a total of a little less than 204,000 square miles. She has lost:

Excerpt for an insignificant corner in southern Africa, all her colonies, over a million square miles.

Virtually all her shipping not bottled up in Bremen and Hamburg, a loss estimated in tonnage at 3,600,000.

Of the flower of her youth, more than 2,000,000.

In cash, nearly $30,000,000,000 to be added to her national debt.

Before the war, though unpopular as a people, Germany was honored among all nations for her intellectual scholarship and her industrial scholarship and her industrial efficiency. She has lost irretrievably this respect and won in its place the mingled hatred and contempt of the civilized world. Scarcely a considerable neutral nation is left except those whose safety compels their neutrality.

No one thinks Germany can retain her gains. No one imagines that she can recover her losses. It is not strange that some of the German people are seriously discussing among themselves the question whether it is not time to change their business managers.

We have two classes of unfortunates in this old vale of tears and laughter, those who can't get their minds on their work and those who can't get theirs off it.

BABY'S OWN SOAP

For Nursery Use

you cannot take chances on Soap. Four generations of Canadians have enjoyed the creamy, fragrant skin healing lather of Baby's Own Soap—the Standard in Canada for nursery use, on account of its known purity.

Baby's Own Is Best for Baby—Best for You.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

Habit is as strong as death.

CATCHING COLDS.

As our forebears, who first got the knack of building houses, found them comfortable, conducive to ease if not to dignity, they became enervated by constantly rebreathing their own pulmonous exhalations mingled with those of their family, their boarders, and such of their animal friends which they could not bear to see suffer in the raging elements without. Then coughing and sneezing, by which particles of germ-laden material was disseminated, helped infection along considerably. In short, people "caught colds."

Next in order, in the race's evolution came the fetish about night air; so that sleeping rooms were kept hermetically sealed. Bedroom windows are even now, despite all the fresh air propoganda, nailed down come November, and kept so (when properly they should have been nailed up) until March or even April. And yet, winter and summer, what air has the good Lord given us to breathe, at night, if not night air.

Then people came more and more to overburden themselves with clothes, in which they could collect germs, that would thus be added to the assortment already existing in the house. True, most germs cannot live for any length of time outside the living animal "host." And yet one cannot be sure that the germs in one's clothing are always dead ones. And let him who thinks his overcoat is germ-free because it is well brushed, turn it vacuum cleaner on it, and note the result!

QUESTIONS AND ANSWERS.

Blow From a Cow.

About 6 weeks ago our cow struck me with her horn on the left side of the bridge of my nose, "knocking me out." I have suffered since with a pain that extended from the place struck up over the eye and brow and through the eye ball. Do you think there could be any damage, could an abscess be forming without some discharge from the nose or signs from the outside. I am taking — for the pain; am I taking too much.

Answer—Have a doctor skilled in the nose and throat examine you at once. Such an ailment lasting six weeks without recovery is like to mean an abscess in the frontal sinuses—not necessarily a grave condition, but one which may well become so if neglected. There may be pus pocketed in those sinuses and not yet appearing at the nostril. The drug you mention may relieve but never cure such a condition. I cannot judge if you are taking too much; but overdosage is like to depress seriously the vital processes.

Reducing Lips?

Can you tell me of a treatment that will reduce my lips and mouth? Would pinching the lips reduce them? Do tell my something and make me happy.

Answer—Sorry; but I know of no treatment I could guarantee. The remedy you mention would be likely to increase, to have the effect the opposite of that which you desire.

SHORT-TERM AMBITION

"One of the reason why so many girls and women fail to attain real success in business," said a successful business woman the other day, "is short-term ambition. I have girls in my business who have worked splendidly for three, four or five years, making themselves steadily more valuable. Then upon reaching some particular position, they've stopped short. I have several who are not worth a bit more than they were five years ago. On the contrary they are worth less, for in business quite as markedly as anywhere else in life decay sets in when growth stops. Sooner or later those girls, although they are doing their work without blunders or noticeable failure, will be compelled to give way to girls who have life ambitions—girls who are eager and interested, alert to make both themselves and the business in which they are engaged continually more valuable."

If girls would only understand that! We see it so clearly in all departments of life! The minister who is not constantly gaining new visions of truth and making new applications of truth to life soon wearies his congregation. The physician who does not keep up with new discoveries and methods finds his patients turning to other and more progressive doctors. The business man who is not constantly on the alert to study every new suggestion soon finds himself outdistanced by competitors.

There is a sadder failure still. The mother who does not make it the great purpose of her life to keep in touch with her children as their interests broaden comes sooner or later to the heart-breaking hour when she discovers that she has lost their confidence—that she is left behind.

Failures all, pitiful, tragic failures, because they had short-term ambitions, because the goals to which they looked forward were so far short of—eternity!

Daffodils in Pots.

Daffodils in pots should not be forced. Procure the best possible bulbs.

The pots should be well washed and a few pieces of broken crocks placed in the bottom for drainage and over these place a few pieces of charcoal. For soil use composted soil with a good sprinkling of sand, say, about one-fifth. After the pots have been partially filled with soil, set the bulbs an inch apart and all but the extreme tips covered with the soil well firmed, so as to leave three-quarters of an inch of pot above the soil to hold water.

As soon as the bulbs are planted set the pots away in a cool dark place for about eight to ten weeks, in the meantime not permitting the soil to dry out.

If the leaves are light in color shade for a day or two, giving full light gradually, finally moving into the full sunlight and heat of the ordinary living room. The cooler the temperature the better—about 65 degrees being best.

Print Name in Water.

It was a British post who sang something about a name "writ in water," but it remained for a clever Japanese actually to print his name in the colorless liquid. Travelers from Osaka, Japan, tell of a merchant there who has a man write his advertisements in water on the roadway by means of sprinkling cart with a perforated revolving drum. The drum revolves with the wheels and as it does so traces oriental characters along the thoroughfare.

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Subscriber:—I have about an acre inclosed for hog pasture. This has been well manured and plowed and I should like to know what to plant to get the best pasture for the coming year. Would you advise me to sow rye or rape in the spring, or is there something better?

No better crop can be sown for early hog pasture next spring than rye seeded as soon as it can be gotten in, if possible, sowing this fall. Then the ground can be seeded to clover in the rye, and some late pasture provided, also good pasture for the following season. Rape could be sown on this ground early in the spring and would make good midsummer pasture. It would be turned into about six weeks after sowing if weather conditions were favorable, and would make good pasture for two or three months thereafter. There are many forage crops which can be satisfactorily used for this purpose, but in a case like this the rye would afford an opportunity to get the land seeded to clover, which would also provide pasture for the following season.

L.H.:—I have ten acres of corn that was just in the milk when the frost came. Would you think it safe to feed this to cattle and sheep this winter, (from shock), or would it be better to let the hogs eat the corn, and cattle clean up the fodder? If not, what would you advise? I have no silo.

There will be no danger in feeding frosted corn from the shock to either cattle or sheep at least, provided some other forage is given them in the ration, as clover or alfalfa hay. The frosted corn fodder fed from the shock will be in very much better condition to feed then where the fodder is subjected to repeated heavy freezes, as is the case with standing corn.

A.I.:—I have 19 August pigs to get ready for market as soon as I can. What would you advise me to feed, barley, ground, or wheat and oats ground together, feeding in a self-feeder?

Barley is an excellent feed, but for best results should be fed in combination with other feeds such as middlings, where available for growing pigs. Barley would be a much cheaper ration when combined with middlings than would wheat and oats ground together. Sound wheat should not be fed to pigs under present conditions from either an economic or patriotic standpoint, since all the available supply will be needed for human consumption, and the pigs can be grown as well on coarser and cheaper feeds. Barley should always be ground for pigs, and would be better fed in combination with other feeds in a self-feeder, since it is not as palatable as a mixed ration.

Getting Winter Eggs

By A. Gallagher

We are told that "eggs are going sky high" before long. And while they may be somewhat exaggerated, yet we have to admit that prices are on the upward trend. Not only egg prices, but grain prices and, in fact, prices of nearly everything else.

A good many poultry keepers are asking themselves the question: "Will it pay to keep hens for winter eggs and feed high-priced grain?"

The above question must be answered by the individual himself, or by someone who understands local conditions. But so far as we are concerned, there is no question as to whether it will pay or not. We know by long experience that winter eggs are profitable and with ordinary success we still hope to come out "ahead of the game."

Plenty of Feed Essential

There is no magic in getting eggs in winter. But a good many things must be considered. To begin with, it is essential that the fowls kept be healthy and of suitable age, i.e., neither too old nor too young. Old hens, as a rule, put on flesh instead of laying eggs, while small, late hatched pullets or those that were stunted in growth, will lay no eggs during the winter months.

We have tried a good many different kinds of chickens, but have at last settled down with the good old Silver Laced Wyandottes and Leghorns. We have plenty of house-room and always keep the two varieties separate during the winter, when all of our poultry is kept housed much of the time. Now, we don't mean to say that our selection of chickens is the best. We find that they suit our purpose best and believe this to be a step in the right direction. No one is likely to succeed with fowls he does not like.

Keep Pullets Separate

Don't let the young pullets roost in the same house where the hens are kept, until they get used to the rest of the flock. There are always some backward pullets that cannot "hold their own" with the older birds. For those, we have a house and yard where they are kept for a few weeks, separate from the others. Of course, they must have good care and plenty of feed.

Remember, these so-called backward pullets are not the culls, but good thrifty pullets which seem rather timid and, for some reason, are unable to get their full share of the feed. A variety of grains and other things are necessary. Practically the same ration is required for growing pullets as that which is necessary for laying hens.

Also, moulting hens. The latter require a liberal ration. Plenty of feed and good, dry roosting quarters should be provided if the hens are expected to come through the moult and be ready for business, before cold weather sets in.

Buttermilk is Valuable

Buttermilk is very beneficial, both as an egg producer and growth promoter. It also helps the moulting hens to grow feathers. Bear in mind that the latter are under a strain so to speak. Their vitality is being taxed to the limit. The late moulter is very frequently a heavy layer and while she is growing a new coat of feathers, she is, at the same time, laying up egg material for the future. We keep sour milk before the fowls most of the time, but sweet milk should never be used because it takes a load off feet on the bowels. Be careful to keep the milk trough as clean as possible.

There is doubtless a great deal of soft corn in many parts of the country at this time. Be careful about feeding this immature grain to poultry. New corn, at best, is none too safe. In former years, we have suffered severe loss by feeding poultry new corn, especially turkeys. If new or soft corn must be used, we now boil it.

This same rule holds good with other things, such as musty grain, cull bean, etc. If any of these are not too badly spoiled, they may be made suitable for poultry feed by thorough cooking. This sort of feed can be used as a mash by adding bran or something similar. Right here we want to speak a word of caution in regard to the use of crushed corn. When the cob is crushed with the corn it should not be used as a poultry food. The crushed cob is practically indigestible, somewhat similar to sawdust. We have known of a number of cases where poultry have died from eating "cob meal." They simply can not see the difference between cob meal and corn meal.

A Wheatless Ration

While wheat is one of the best egg-producers known, when fed along with corn, we have cut it out of the ration entirely, on account of the cost as well as for patriotic reasons. Instead, we use bran and hulled oats. This, with a little corn meal added, makes an excellent morning mash. Sometimes we use boiled vegetables instead of oats.

When the hens are kept housed, as they must be, when the weather is severe or snow is deep, it is essential to vary their ration. We sometimes add raw cabbage (chopped) to the mash. A little salt or a dash of cayenne pepper helps to give it a "tang" that is greatly relished. Green stuff, or a substitute for same, should be provided. Pure water, with the chill removed, should be kept within reach.

Don't fail to provide some sort of place where the hens can get all the exercise they need. We have regular scratch sheds attached to each house, but in former years the floor of the poultry house answered very well.

Every fall when dry leaves are plentiful, we store large quantities to be used as scratch material. Rye in the sheaf, or other unthreshed grains are used, also. Small grain, such as kaffir or even millet, will answer to make the hens work, but will not take the place of corn.

Fall Feeding Important

Sharp grit is an important factor. Again let us impress upon the minds of beginners the importance of a generous ration, right now, for both old and young. Don't wait until winter to begin feeding for eggs. The fact is, chickens are more often under-fed than over-fed, at this season of the year. If judgment is used in the selection of feeds, it is next to impossible to over-feed a moulting hen or a growing pullet.

As to hopper feeding, don't do it unless the fowls have been accustomed to it, from the time they were hatched. Otherwise, they seldom know when to stop eating.

A warm mash in the morning, with scratch-feed and "grains" through the day and a full feed of warmed corn at night (never feed frozen corn) will give better results as a rule. We usually allow one quart of shelled corn for every ten fowls. A large handful for each hen is a safe rule, but may be varied.

My mother says if I sit up
And read this way at night,
I'll soon acquire a shiny dome
Like old Professor Bright.

Horse Sense

Many men insist on feeding silage to horses so as to reduce feed costs. Many men have fed silage to horses for years with success. Many men have poisoned horses by feeding them accidentally moldy silage.

Right there is the trouble. Horses are so valuable and so easily killed by damaged feed that caution has repeatedly been urged in the use of silage. On the average farm it is better not to feed it at all than to feed it and lose even one horse. Those who are determined to feed silage should follow a rigid system of closely scrutinizing every forkful as it is taken from the silo. When a little moldy pocket of silage is discovered it must be rejected. Silage should be thrown down by daylight so that inspection is easy.

Of course the general quality of the silage must be as perfect as possible, and that is determined by care and thorough tramping as the silo is filled.

Get ready for the War Loan.

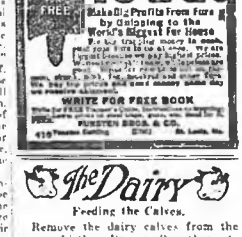
Gillette Safety Razor

He'll Appreciate Your Good Judgment As Well As Your Good Will

if for Christmas, 1917, you send him a Gillette Safety Razor! That's the gift that is valued Overseas for *itself* as well as for the sake of the sender. Few articles of personal equipment are so welcome, for the Gillette is known up and down the Allied lines, by Canadian, Briton and Anzac, Frenchman, Italian and American, as the one sure passport to a clean and enjoyable shave.

Even if he has already had one, the man in whom your hopes centre will be glad to get another Gillette Safety Razor. For under active service conditions, equipment so sought after as the Gillette strays easily and often, and he may now be trying to worry along again without one. So whatever else your box may contain, don't forget a GILLETTE SAFETY RAZOR—and a good supply of blades.

If you prefer, we will take your order, through your dealer or direct, and deliver the razor of your choice from our nearest depot Overseas. Ask your dealer about this when he shows you his Gillette assortment.



Standard Sets and "Bulldogs" cost $5.00—Pocket Editions $5.00 to $6.00—Combination Sets $6.50 up—at Drug, Jewelry and Hardware Stores.

Mails are congested—shipments slow. Send his Gillette early!

Office and Factory: Gillette Building, Montreal 274

Trap for FUNSTEN To Day

The Dairy

Feeding the Calves.

Remove the dairy calves from the cow at birth. Do not allow them to suck, unless weak or unable to drink, or unless the cow's udder is severely caked. Mother's milk for the first four days, at the rate of 8 to 10 pounds divided into three or four feeds, is essential. Feed whole milk for the first ten days, then start replacing part of the same with skim milk, so that when the calf is one month of age it may be receiving in two feeds daily twelve pounds of skim milk, plus a tablespoonful of finely-ground scalded flax-seed jelly.

At three weeks old feed a small quantity of whole oats in the manger. Fine clover hay and clean water might profitably be kept before them from this time on.

During the next fifteen weeks gradually increase the skim milk to 16 to 20 pounds daily. Add to the flax-seed jelly other constituents to make a cream substitute as follows:—Fine ground flax 1 part, fine ground oats 2 parts, ground corn 2 parts. Feed in the milk divided into two feeds daily at the rate of one-eighth pound at the start and increase to 1 pound.

Replace the whole oats at four weeks of age with a grain mixture of equal parts bran, rolled oats and ground corn. Start the calves on one-eighth pound per day and increase gradually to 1½ pounds daily at twenty weeks of age, when the skim-milk may be gradually cut off and this grain ration increased proportionately.

Do not expose your calves to heat and flies, but during extreme heat keep them in a dark, cool box until four months of age, after which they may have a night paddock. If fall-dropped calves keep in a clean, bright, comfortable, warm box stall. Feed a limited amount of roots or a mixture of roots and ensilage. Feed salt in limited quantities regularly, and water as required.

ELECTING NEW PARLIAMENT

The Dominion elections are announced to be held on Dec. 17th with the nominations on Nov. 19th. With only 42 days from now in which to place candidates in the field under Union Government auspices, the probability is that there will be quite a number of constituencies fight it out on the old lines.

The two parties succeeded in getting together to the extent of forming a cabinet in which the responsibilities are practically divided upon Conservative and Liberal shoulders. Throughout the English-speaking provinces there will be very few candidates take a stand in direct opposition to the enforcement of conscription. Nearly every candidate nominated on a win-the-war platform will announce himself as win-the-war man, and where two are in the field, it will be a matter for the electors to choose between them and their decision apart from the war problem will not always result in the election of the most desirable man to send to Ottawa in this critical time. It is not party standard bearers we want just now—not politicians, but patriots—to transact our national business.

The War Time Elections Act provides that the Premier shall designate the candidate in a riding who is to be regarded as the Union Government candidate. This provision is made for the guidance of soldiers overseas who are to vote in this election. The soldiers are to mark their ballots for or against the Government, and the votes are to be duly apportioned to the candidates later. This may work out fairly or not, so far as the apportioning of the soldiers' votes is concerned. The electors at home could make a choice between two union government candidates, one a Conservative and the other a Liberal, while the soldiers' ballots would all be counted for the candidate approved by the government.

Conscription Liberals' Policy

A convention of Liberals of Ontario who support conscription and Union Government was held at Hamilton on Friday, when a policy was partly clearly outlined by Hon Frank Carvell, Minister of Public Works; Hon C S Newburn, Minister of Militia; and Hon N W Rowell, President of the Privy Council. The convention is reported to have been an impressive one, with about 400 delegates present from all parts of Ontario.

Resolutions were passed declaring in favor of the enforcement of the Military Service Act, also conscription of wealth and productive forces for the vigorous prosecution of the war to a successful conclusion; endorsing the formation of a Union Government; and pledging support to any candidate supporting Union Government who shall be the choice of a joint or fusion convention of both or all parties in a constituency.

General Newburn in his addresses declared that he never wanted to get into public life, and he will not get into politics. He pointed out that Canadian army casualties up to Oct 27th made a total of 198,056 officers and men since the outbreak of the war, and these figures show the need for more men. We cannot get more by the voluntary system, and should have had the selective draft long ago. At least 10,000 men per month should be sent overseas as re-inforcements if the Canadian corps was to be maintained intact. The general told in a clear, forceful, business like way some of his immediate plans for improvement in Canada's military administration. He intends getting rid of officers and men who have remained in Canada doing little more than drawing their pay. The Canadian militia is not a charitable institution, he says.

Mr Rowell made a strong appeal for support of Union Government, and impressed the urgency of the war's needs. In no country at war has party government been able to unite the whole nation so as to get the people to accept legislation absolutely necessary to throw the whole country's energies into the war. Party government had to give way and the parties have had to get together in France, New Zealand, Italy, Serbia, England and Roumania. Speaking of Liberals uniting with Conservatives, Mr Rowell pointed out that at the time of Confederation George Brown and his colleagues had to face the question whether he should enter a government with his hated antagonist, Sir John A Macdonald, to help bring about confederation, or whether he should refuse. The Liberals of Quebec were then united in opposition to confederation and to coalition. For his action then George Brown was charged with having betrayed his principles and his party, but to-day every Liberal and every patriotic Canadian recognizes that there is no finer chapter in all Canadian history than the service rendered by George Brown and the Liberals at that time. They face a much more critical situation to-day, when they are called upon to decide whether they shall sink party differences and join in a Government to insure the vigorous prosecution of the war.

Hon Frank Carvell, in discussing the war's needs, said, "All that a man has to do is to realize what has been occurring to the men who have gone down, to think of the carnage which has gone on, and to think what would happen if Germany won, and then ask himself if there is any other way that the war can be won except by getting men. I don't believe there is a man in Canada to-day who hates the war, or the word conscription, any more than I do, but we are up against conditions nobody ever knew of before in Canada," he declared. "It is merely a question if we shall do our duty to civilization and humanity or if we shall not. We cannot do it in any other way than by getting men." Mr Carvell said he would not offer any apologies for joining the Union Government, nor try to whitewash away those things he had said were wrong in the Borden Government. "I want to try to leave the past, start anew and unite in war effort. We are going to fight the thing to an end, and the Union Government is going to win out. . . We are going to leave the tariff till after the war. . . After the war I will explain my views on the tariff, and explain them in no uncertain tones." In thinking over the difference between his position and that of Sir Wilfrid Laurier respecting conscription, Mr Carvell says he always came back to the question, "Suppose the referendum should be defeated, what then?" Canada would be in the same position as Russia. . . If the people do not endorse Union Government it will practically mean that Canada will quit the great cause for which we are fighting. . . The very fact that so many are claiming exemption is one of the greatest reasons which justify the Military Service Act. . . Britain has raised five million men and is saving civilization simply because her statesmen had the nerve and courage to say to the people, we are up against a condition where we need men and are going to get them."

South Bruce Politics

Mr John Purvis, Conservative candidate in South Bruce, has withdrawn from the field. Mr R E Truax, the Liberal candidate, has stated that he will oppose the suspension of the Military Service Act, if elected, this statement being made to the executive of the Liberal Association, at a meeting in Walkerton on Tuesday. The Conservatives are moving for a fusion convention at Walkerton on Nov 12th. There is a feeling that an election should be avoided in this county by returning Truax in the south and Clark in the north by acclamation.

"I FEEL LIKE A NEW BEING"

"FRUIT-A-TIVES" Brought The Joy Of Health After Two Years' Suffering

MADAM LAPLANTE

35 St. Rose St., Montreal. April 4th.

"For over two years I was sick and miserable. I suffered from *constant Headaches, and bad Palpitation of the Heart* so badly that I feared I would die. There seemed to be a lump in my stomach and the Constipation was dreadful. I suffered from *Pain in the Back and Kidney Disease.*

I was treated by a physician for a year and a half and he did me no good at all. I tried "Fruit-a-tives" as a last resort. After using three boxes, I was *greatly improved* and twelve boxes made me well. Now I can work all day and there are no Headaches, no Palpitation, no Heart Trouble, no Constipation, no Pain or Kidney Trouble and *I feel like a new being*—and it was "Fruit-a-tives" that gave me back my health".

MADAM ARTHUR LAPLANTE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Don't forget we are giving reductions on nearly everything in the store. You have an immense stock to choose from.

All kinds of Farm Produce Wanted.

Ballachey, Laidlaw & Co.

Can You Feed More Live Stock?

If so, you will be interested in conditions under which freight charges will be paid for you on car lots.

The Ontario Department of Agriculture is anxious that the splendid crops harvested this fall should be used to best advantage. In many cases this can be done by feeding a few more head of cattle or sheep for breeding purposes. The Department therefore calls attention to the announcement of the Federal Minister of Agriculture offering to pay freight shipments on car lots from eastern stock yards to country points.

Please note these facts:

Individually or in co-operation with your neighbors you can purchase a car load of heifers or ewes, or both combined, and have them shipped from any eastern stock yard to your station without any cost for freight charges. You will be required to make a declaration that the stock is for breeding purposes only.

Any farmer or drover can purchase a car load of cattle for feeding purposes on the Winnipeg market and have them shipped to any country point in Ontario upon payment of only one half the usual freight charges.

Feeding at the Toronto Stock Yards available at reduced rates, and expert assistance is at disposal of farmers.

"Every effort should be made to bring the surplus stock of some sections to the surplus feed of others. All indications point to a steady demand for the meat supplies of this country for some time to come."—Sir William Hearst, Ontario Minister of Agriculture.

The District Representative will assist you in organizing a co-operative car for your district, if desired, or in giving any other information.

N. C. McKAY, District Representative

Ontario Dept. of Agriculture, Walkerton, Ont.

The Military Service Act, 1917

DON'T DELAY!
Do It TODAY

THE MILITARY SERVICE ACT is passed; the Proclamation issued October 13th. It is now the bounden duty of every man in Class One to report for service or claim exemption. This includes all bachelors and widowers without children (not otherwise excepted) who were 20 years old on the 13th October, 1917, and whose 34th birthday did not occur before January 1st, 1917.

What To Do

Go to your Post Office and ask for the form for reporting for service or for claiming exemption. The form contains clear instructions for filling in. Do this not later than NOVEMBER 10th.

Beware of the Last Minute Rush

With so many thousands of reports and claims to be dealt with, the rush of Class One Men will grow heavier day by day. You will waste less of your time and serve your own best interests if you avoid the inevitable rush on the last days.

The law is being enforced with the Government and the People firmly behind it. Obey the law. Do it today.

VILLAGE COUNCIL

Council met on Thursday, Nov 1st, members all present. Minutes of last meeting read and signed.

The following communications were read: From the Clerk of the Peace, certifying that the reeve, clerk and assessor had each performed his duties as selector of jurors for 1917; from the Organization of Resources Committee, urging active assistance towards the success of the forthcoming war loan, known as Canada's Victory Loan; from E. P. Heaton, Ontario Fire Marshal, advising as to the prevention of fires and enclosing copy of suggested by-laws in that connection; from Canadian Underwriters' Association, stating that unless a nightwatchman's services were restored the rate of insurance would be increased.

Houston—Logie—That this council lend its influence to the local committee to further in any way possible the sale of the bonds of Canada's Victory Loan to the citizens of this municipality.—Carried.

Pearce—Houston—That since the work on North Street, contributed to by grants from council and townships of Greenock, Bruce and Saugeen, in accordance with resolution passed by this council on 1st February last, the sum of $100—amount promised by Paisley—be paid to Reeve Steele, a member of the committee in charge of the work for disbursement to parties entitled thereto.—Carried.

Logie—Sparrow—That the clerk is hereby instructed to communicate with the Canadian Fire Underwriters' Association regarding rate of insurance in the event of a nightwatchman's services being dispensed with.—Carried.

Pearce—Sparrow—That Donald Sutherland be appointed sexton for Paisley cemetery. His duties, in addition to grave digging, for which he shall be paid at the rate of $3 each irrespective of size, by the parties employing him, shall be to cut all weeds and grass on the grounds twice annually, the first cutting to be on or before the 15th of June and the second cutting by the 15th of August in each year, weeds and grass to be removed from the grounds, his salary to be $25 per annum.—Carried.

Houston—Pearce—That the following payments be made: Murdoch Keith, $45; Weighmaster, $22 15; J H Meurer, $35; Municipal World, $1 25; Reeve, $4; Clerk, $4; Assessor, $4; Fire Co's fees, $16; Paisley Public Library, $75; F F Pearce, $176 25; Paisley Electric Light Co, $49 35; John Shaw, $1; Wm Sparrow, $4; Wm Ranken, $5; J R Laidlaw, $2 50; the Reeve, $100.

PRESENTATION TO MR. AND MRS. A. CORMACK

About eighty friends and neighbors assembled, unbidden at the home of Mr and Mrs And Cormack, Flora road south, on Monday evening of last week, to have a parting social evening with them before their removal to their new home in Paisley. Mr J M Hopper was appointed chairman. The following address was read by Mr D Watson, and the presentations were made by Messrs John Maxwell and Elsworth Watson:

To Mr and Mrs Andrew Cormack

It was with feelings of the deepest regret that we, your friends and neighbors, learned that it was your intention to leave the county and take up your residence in Paisley. You have been with us now for a great many years, and in that time both of you and your entire family have earned and deserve a warm place in our thoughts and hearts. It is not our intention to make this occasion a formal one, but before leaving for your new place of abode we have felt that we would like to take the privilege of meeting here tonight to express in a small measure the good will which we bear towards you. We have obtained this morning chair and rocker and we ask you to accept them not only as a simple gift but for the proof that it gives you that we all think well of you and are so sorry to lose you from our midst. Nor have we forgotten Miss Reta, and we have obtained this jardiniere stand which we hope she will accept as a token of our kindest regards. We also convey to you our very best wishes for your future, and we hope that your sojourn in your new place of residence will be filled only with blessings for many years to come. While we regret to lose you, yet we have the consolation of knowing that your new location will not entirely separate you from your old connections and that you will be able to return from time to time, and we trust look back upon your life here with memories only of the most pleasant. Signed on behalf of your friends and neighbors—John Maxwell, Elsworth Watson, David S Watson.

Mr Cormack briefly and appropriately replied to the address, following which an impromptu programme was gone through. Speeches were made by Messrs J B McBride and Thos McBeath. Vocal solos and songs were rendered by Mrs H Lyon, the Misses Bell, the Misses Porter, Mrs W T Hopper and Mr W T Hopper. Miss Mary Spong gracefully danced the Highland fling. The balance of the evening was given over to music and dancing, the party breaking up in the small hours of the morning.

PRESENTATION TO TEACHER

A very pleasant afternoon was spent at Jackson's school-house, S. S. No 8, Greenock and Elderslie on Wednesday, Oct 31st, when the residents of the section assembled with the pupils to spend a few social hours with their teacher, Miss Galbraith, before her resignation came into effect. With Master Roy Teeple as chairman an excellent programme was furnished by the pupils of the school. At the close of the programme Miss Galbraith was called to the front, where an address was read by Bertie Ritchie, and the presentation of a beautiful wrist watch made by Edith Davidson, Miss Galbraith, though much surprised, made a fitting reply.

Dear Miss Galbraith—It was with mingled feelings of surprise and regret that we learned of your intention to sever your connection with our school, of which you have been the very efficient teacher. You have always displayed an interest in everything which was for our welfare and when sorrow entered our homes we found in you a sincere friend, ever ready to sympathize. As a slight token of appreciation on our part, and as a parting remembrance, we ask you, Miss Galbraith, to accept this wrist watch and as it marks the flight of time may it serve to enable you to recall only happy memories of your associations with us. In conclusion we assure you the trustees, and all others with whom you have been associated in the section, unite with us in wishing you wherever you may be placed in life, excellent health, every happiness, and that you may continue to enjoy the high degree of success which has attended your work in the past. Signed on behalf of the school—Clara McMorran, Ola Megraw, Annie Ritchie.

Lunch was then served by the ladies of the section and the pleasant afternoon brought to a close by the singing of "God Save The King."

A GREAT DRAWING TEAM

By Augustus Beidle

A good drawing team is just as much of a joy to the man that owns it as it used to be to the bush-lot lad. We talk a good deal—some of us—about the great horses we used to handle the ribbons over in the bush, lifting out great loads of elm logs, sometimes 1,500 feet or 2,000 sometimes more, according to the man who was telling it, from the stump to the skidroad and the concession line.

Certainly some of those teams could draw and surely some of their drivers did love to be able to talk about it. But there are more good average hauling teams in the country now than there were in the bush days. Farmers have gone in for specializing on cars, cats and roadsters, because they understood that a poor team is bad economy when work has to be done in a hurry. Getting stuck with a load in the field is a dead waste of time and of temper. We used to be stuck often in the old days with some of those poor teams picked up any old way at an auction sale. But a good span of Clydes or Percherons nowadays—a real pair of mortice-agaisted working horses with stack loads. The only thing that happens in that line with such horses is broken harness or a snapped doubletree.

Of course a good deal depended on the driver as it does now. One of the best drawing teams ever known in an Ontario county would pull like a tractor engine for the boss, but when it came to the hired man they sweated and jumped in the collar like a pair of balky Texas steers. When the boss pulled the line over them and yelled "Get down together"—they got down, those Bob Hunters, and lifted the load—heavens, how they could lift it! No matter what the load was, grain or logs or gravel, it came out of the hole onto the high road, just by the simple knack of getting down together.

Just now the greatest hauling team ever known in Canada are engaged in lifting the biggest load that a team ever stood in front of. The load is

$100,000,000 of Canadian Victory Bonds.

That's a tremendous load. The load is there all right. Canada has the money, twice as much, ready to pile up for victory. It's a matter of lifting the load. It's a matter of what team is to do it, and who will be the driver.

What's the best team for this job?

The Canadian Farmer and the Government of Canada.

If those two can't lift a great part of that load, you might as well leave it alone.

Who's the driver?

A great boss named Victory.

Victory! VICTORY!

Letters from the Soldiers

From a Nurse in France

Miss Ida Anstead, daughter of Mr and Mrs W C Anstead of Paisley, wrote the following interesting letter to her sister, Mrs Bert Warder, of Wiarton. It will be remembered that Miss Anstead gave up a splendid position as principle of the Training school for Nurses in connection with the state Hospital at Ogdensburg, N Y, to take up Red Cross work at the front. Her only brother, Corp W A Anstead, was with the transport section in France for three months, but is back in England again.

Somewhere in France

Dear Margaret—I have not had a letter from home since I left New York. I have written a great many letters home and asked them to send them on to you. I wonder if you have received them. You have no idea what an awful feeling one has have away off here not hearing from home, and to be unable to send a telegram, special delivery, or anything. I am anxious, too, to get in touch with Willie for I suppose he is in France again. This is a very interesting place and our post is very attractive in every way. The weather has been very fine until just now and I believe the rainy season is on for it rains very frequently. The ocean voyage was very interesting and exciting, too, and I have seen a great deal of the country as we have travelled quite a little. Last week I was in Paris. Just think of it. The old place is full of historic wealth and is so different from New York. I've been studying French and French History which makes the places much more interesting. I have postal cards of all the places and altho' I am not permitted to mail them I can tell you about them some day. I am so happy that we came over when we did, it gives us a chance to get used to the change of climate, etc, for it is very different. I am already wearing flannels and have heavier ones tucked away for later on, and am already wearing bed sox and a bed wrapper. What do you think will become of me in Jan. or February? But it is the dampness which gets into one's hide and makes the difference. Censorship is quite strict with us which makes letter rather difficult. I mean I cannot say very much regarding our surroundings, or what I see. I suppose you Canadians are feeling rather proud of U S since so many troops are over here and you know they mean business. Doubtless you get much more war news than we do here. Newspapers are not plentiful.

Thursday, 11, 17. Two letters to-day, one from mother, the first I've had and she's received all of mine. It makes me so happy for I am so far away now, I could not run home now as I did when they were ill last winter. I suppose you have had a wonderful time in London. Do you hear from Will? Send me his address, I guess mother forgot it. She said that he was in London, so of course in that case my seeing him is out of the question at least just for the present. Last evening we had a concert given by some very nice French people, singing and music on the violin and cello. The soloist was from the Grand Opera in Paris and we all enjoyed it very much. My position has been kept open for me and my assistant is taking my place until I return. Who knows when that will be?

You will be interested to know that Miss Wilson, of Woodstock, is on the unit. She is not my room-mate this time. Mrs. Wright, the mother of one of my friends in Ogdensburg, asked me to send her a list of articles needed for one comfort here and she will send them through one of her societies. You would laugh to see the list. Her idea is to make boxes and send them for Xmas to as many girls as possible. One of the things I asked for was a float tub and little wash board. These are quite necessary, as to date we are required to do our own laundry or pay for it, which former I prefer as far as possible and have found toned clothes a needless luxury. My room mate and I have fixed up our little "chambre" quite nicely with cretone, etc. Our rough wooden washstands we have joined together with two boards and covered with a curtain which leaves a space between for shoes, etc. Oh! it is fun washing in cold water a la septembine morning, but its all in a day's work. I've had one beastly cold and tho't I was in for Thc, sure but have made an excellent recovery. At present roommate is passing through a similar seige.

Now, my dear, I'm just pining for one of your long letters and hope you have already returned good for evil and have one en route. My address is L. S. A. Base Hospital, 9th American Expeditionary Force, France, and you need only use a two cent stamp. Mother said that you had some Advocates for me. I shall be happy to receive them.

MONEY BREEDS

The funds of the Dominion Life are accumulating at 8 per cent. interest, and those of the average company at 5½ per cent. Do you know that an annual deposit of $100.00 at 8 per cent. will amount to $4945.29 in 20 years, at 5½ per cent. to only $3678.62? Does it take a mathematical genius to comprehend why

DOMINION LIFE

Another Bruce Soldier Tours Auld Scotia

Jas. Brown, of the Canadian Cycle Corps at Seaford Camp, writes to his father, Mr Geo Brown, 8th Bruce, describing his trip to Scotland:

We got our pass last Friday afternoon, and as we got a free trip, I went to Edinburgh. The first place we went to was Walter Scott's monument. We were allowed to go up the top, which is reached by a winding stair. It is 200 ft high, and commands a splendid view of the city on a clear day. You have likely seen pictures of it. The monument cost the city £15,000. It contains a beautiful sculptural figure of Sir Walter Scott. The next place we went to was the museum and art gallery, which contains many sculptures and foreign paintings which were well worth seeing, and consists of the art of many schools and also modern paintings. The next place was Edinburgh Castle, where every visitor goes who happens to be in Edinburgh. The oldest part is St Margaret's Chapel, the oldest and smallest chapel in Scotland, where many children were baptized up until the war began. Here also is the state prison where Argyle was confined before his execution, as were also several women on account of their religious convictions. There is also a battery which was used many years ago and which goes off at one o'clock daily. Here is "Mons Meg," an old piece of artillery which took part in the restoration of the Scots. We also saw Queen Mary's apartments and rooms in one of which James I of England was born. I saw the window where he was lowered safely to Mary's friends during the troublous times of her reign. The banquet hall contains many old flags, coats of arms, spears and sword. Here also is the gun carriage which bore Queen Victoria's dead body from the Isle of Wight to London. We were not allowed to see the crown jewels as they are stored away for safe keeping from the Zeppelins. There were seven gates before we entered the castle, and the walls of Argyle's prison were seven feet thick, so there was little chance of escape. After dinner we went down High Street and were shown through the old Parliament House where the Scots had their parliament. Here also are the court houses where criminal and civil cases were tried. Close by is the place where John Knox was buried, and a monument to Charles II. Not far from the monument is the "Heart of Midlothian," marking out a prison where a hanging was deemed an entertainment. Beside this is St Giles Cathedral which I will tell you about later. From there we went to John Knox's house to which he died and where many of his relics were kept. The lower story is kept as a bookshop for a bookseller. On leaving this we went to King's Park which is a very beautiful park and has a high hill in it. The highest point is Arthur's seat which is 822 ft above the sea level, so you can imagine what a view one could have on a good day. That was all for that day except going to a theatre. Sunday morning we went to St Giles Cathedral which dates from the ninth century. It was here Janet Geddes threw her stool at the minister's head when she thought they were introducing the Roman Catholic religion. We heard the minister of Paisley Abbey. It is a different place for a minister to preach in, as his voice becomes mixed up with the echoes due to the numerous pillars and castles. It was here the Scottish kings used to worship and their chairs are still there. In the afternoon we went down to Holyrood Palace, the home and birthplace of many Scottish monarchs. The oldest part is the abbey where several of the kings and queens as well as other nobility are buried. It has housed Queen Victoria, George IV and King Edward while they were on their visit to Scotland. In the palace is a beautiful art gallery which contains the portraits of the Stewart kings. Here also is Lord Darnley's room in which is the bed of bonnie Prince Charlie. A private staircase leads from here to Queen Mary's apartments, which are well preserved to this day. Near her bed is the supping room where she was once having tea with Rizzio when Lord Darnley's men came up the private staircase and murdered him. After leaving the palace we went up Calton's Hill to see Nelson's and Burns' monument. Here also is part of the monument erected to commemorate the battle of Waterloo, but as only one-fifth the amount was subscribed the building wasn't completed. On Monday forenoon I took the train for Paisley where I spent a couple of hours visiting the abbey and museum. In this abbey Bruce and Wallace each worshipped, and here Wallace received a great deal of his education. The oldest part was built about the twelfth century, but of course has been repaired since. I also visited the museum which is well worth seeing. Tuesday I spent in Glasgow, having stayed at the Y M C A over night. The first place I went to was St George Square where most of the monuments are erected. I was also shown through the municipal building which has the finest staircase in the world. I then went to the cathedral which was erected in 1181 and which is being repaired again. On leaving the cathedral I went to the people's palace on Glasgow green in which is a lovely winter garden, conservatory, art gallery and museum. On the green is a large monument to Lord Nelson and a beautiful fountain called Doulton fountain. Near by is St Andrew's Episcopal church, the oldest in Scotland. On Tuesday night I came back to Edinburgh. Wednesday forenoon I started back and stopped off at Gateshead where I went to see the Thompsons. I thought Tom Thompson and his wife were the only friends I had over here, but I found that his mother was living and that he also has two married sisters in Gateshead.

Farm For Sale

LOT 7, Con. 13, Elderslie—100 acres, all under grass. Good buildings and orchard. Apply to D. FORRESTER, Barrister, Paisley.

Valuable Farm for Sale

100 ACRES—Lot 18, Con 9, Bruce Tp. Conveniently situated, suitable for either stock or grain farming. Water abundant on the farm. Apply on the premises for further particulars and terms, or address R. PARKER, prop. R R No 8, Tiverton P O.

Stray Heifer

Came to the premises of the undersigned, on Oct. 4th, one yearling heifer. The owner is requested to prove property, pay expenses and remove the animal. Wm D M HAY, Greenock.

Heifer Lost

STRAYED from the premises of the undersigned Oct 3rd, a dark red yearling heifer. Any information as to the animal will be thankfully received. Mrs D M HAY, Greenock.

All Christmas parcels intended for soldiers overseas must be in post office before November 15 or they will not reach the men at the front until after Christmas. Postoffice officials wish to impress upon relatives of soldiers the necessity of sending parcels as early as possible, to insure their arrival in time for the Christmas season.

ANTHRAX

The disease of anthrax occurs among sheep, horses, cattle and other herbivora or grain eating animals. No animal of any of these classes is capable of resisting anthrax infection providing suitable conditions obtain. The disease is also liable to attack human beings although it does not appear epidemically in man. Many cases have been reported where men have died as a result of contracting anthrax from the skinning of an infected animal or from handling the wool or skins of animals that have died from the disease.

This information is brought out in Bulletin No. 23 of The Health of Animals Branch of the Dominion Department of Agriculture entitled "Anthrax." The bulletin is written by Dr Chas H Higgins, Pathologist, and deals with the subjects of occurence, methods of infection, soil infection, diagnosis, etc. It is pointed out that the carcass of the animal that has had the disease should be destroyed by fire, care being taken that all discharges and litter about the animal be burned with it, even to the halter it has been wearing. Under no circumstances should the animal be skinned, as this is a most dangerous procedure. Neither should it be dragged over the farm. Deep burial is sometimes resorted to, but it is not nearly so satisfactory as burning.

Veterinarians, farmers and others who have reason to suspect the existence of anthrax are compelled, under the Animal Contagious Diseases Act, to promptly notify the Minister of Agriculture, the Veterinary Director-General, or the nearest Veterinary Inspector.

Prevention of Eye Trouble.

Prevention is better than cure.
It is cheaper.
It is possible when cure is impossible.
Eye trouble may be avoided by the timely use of glasses, averting discomfort, suffering and permanent impairment of sight. We are properly equipped to adjust glasses and guarantee satisfaction.

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

W. H. DAVISON

—Mr R. J. Ball, ex-M.P., who was nominated two years ago as the Liberal-Conservative candidate for South-East Grey, announces himself as a supporter of the Union Government under Sir Robert Borden, and has asked to have the Executive of the Conservative Association called together, in order to consider the question of his resignation as an old party candidate and permit him to take the field in the interest of the Union Party. Mr. Ball has strongly supported all war-time measures and has done everything possible to assist the boys at the front.

LAURIER'S MANIFESTO

Would Suspend Military Act and Submit Referendum

Sir Wilfred Laurier places his policy before the country in a document addressed to the Canadian people On the all important question of participation in the war, Sir Wilfred claims that "a fundamental objection to the government's policy of conscription is that it conscripts human life only and does not attempt to conscript wealth, resources, or the services of any persons other than those who come within the age limit prescribed by the Military Service Act." The first duty of a Laurier administration would be to "find the men, money resources necessary to ensure the fullest measure of support to our heroic soldiers at the front and to enable Canada to continue to the very end to do her splendid part to win the war." To this Sir Wilfred adds: As to the present Military Service Act, my policy will be not to proceed further under its provision until the people have an opportunity to pronounce upon it by way of a referendum. I pledge myself forthwith to submit the act to the people, with my followers to carry out the wishes of the majority of the nation as thus expressed.

Other planks in Sir Wilfrid's platform are: To form a National Government composed of the ablest men of the country to carry out this policy; to make the welfare of the fighting forces of the country the first consideration; to stop profiteering even if it becomes necessary to establish government control of munition factories; to take drastic steps to reduce the high cost of living; to increase, double and quadruple the output of all that may be necessary for fighting and marching armies; to remove the excess tariff wall which contributed to the high cost of commodities, including the war tariff against imports from Britain; to remove the tariff on agricultural implements and other essentials for greater production; to organize and carry out a strong appeal for voluntary recruiting, which has not had a fair trial; to eliminate the danger of a "disjointed Canada at this critical hour of our history;" to reopen and review the Canadian Northern deal; to promote a strong and aggressive policy of immigration in order to build up the country after the war; to replace returned soldiers in civil life and enable each man if possible to become self-sustaining; to provide more adequate measures for the care and comfort of soldiers' dependents as a national obligation, not through the medium of public benevolence or charity.

PUBLIC NOTICE

A convention of electors of South Bruce who are supporters of the Union Win-the War Government (including women entitled to vote), will be held at the town hall, Walkerton, on Monday, the 12th day of November, at 2 p m, for the purpose of nominating a candidate for the riding to support the present Union Government. All such supporters are invited to be present. Women entitled to vote under the Military Franchise Act are especially invited. Signed—David Graham, Duncan McKinnon, Thos Powell, Calvin Crawford, Alex D Robb, Jas Rushton, Robt Russell, R H Baker, Arch Campbell, Arch Tolton, M Sinkler, W D Halliday, Jas Leggett, W G Sires, David Robertson and others.

Employers Liable

Employers of labor must ascertain who among their employees, are within class 1 of the Military Service Act, i e, who are 20 to 34, unmarried or widowers without children. Employers are liable to a penalty or imprisonment for failure to make such enquiry, or having in their employment for more than seven days after Nov 10th men of Class 1 who have omitted to comply with the terms of proclamation, or for engaging the services of such men, or retain in their service men who are deserters. For their own protection employers should demand on or before Nov 10th, from their employees within class 1 the production of a receipt from the postmaster showing that they had signed either a report for service or a claim for exemption.

H. PFAFF & SON

The AUTOMOBILE

Cooling System Needs Care Now.

"The great danger in summer is over-heating and the great danger in winter is over-cooling," says an expert. "A few hints at the present time, just as winter is approaching, should be noted.

"Few motorists realize why an automobile engine does not pull well when cold. It must be understood that it is a heat engine and that it is the expansion of the burning gas in the cylinder which furnishes the power. The more this gas expands the more push or power the piston receives. The heat necessary for this expansion is produced by the burning of the mixture of gasoline and air after it is compressed in the cylinder. The temperature of the resulting flame is between 2,000 and 3,000 degrees Fahrenheit. Naturally this causes an enormous pressure on the piston, but if any of the heat is lost and so is not used in expanding the gas the resulting pressure drops, with attending loss of power. When the engine is first started the cylinder head and walls are cold, likewise the valves and piston head and the water in the cooling system. Most of the heat units must be lost in warming these parts, and so the engine lacks power.

"This explains why the engine does not develop its full power until it has been run several minutes. The greatest efficiency is obtained when the engine is hot. Even with the most efficient systems the power loss approximates fifty per cent., which, unfortunately, is unavoidable with the internal combustion type motor.

"To prevent excessive loss at the start some systems use thermostats to control the water flow, preventing it from passing into the radiator until it has warmed the engine to the proper temperature. Others use a set of adjustable louvres in front of the radiator to allow sometimes more and sometimes less air to pass through the radiator. This may be an automatic control by thermostat or may be controlled by the driver from the seat. All these systems are designed to heat the engine rapidly at the start and so save time and gasoline.

"It is evident that over-cooling prevents the engine from developing its full power, thus wasting gasoline. In hill climbing the loss of power becomes more serious. If the car cannot make it in high gear the intermediate is used, running the engine at a more rapid rate than in high gear and so wasting still more gasoline. Apart from this it delays the progress of the car, which is sometimes important.

"Here is where a car with adjustable louvres has an advantage over one not similarly equipped. In cold weather the louvres may be very nearly closed, thus taking away a minimum amount of heat, watching carefully, of course, to see that no steam comes from radiator cap or over-flow tube. If the radiator is not provided with adjustable louvres use a piece of sheet metal, cardboard or pasteboard, cutting off half or more of the radiating surface. Some drivers attach the strip in front of the radiator, but this detracts from the appearance of the car. Place it back of the radiator, but do not wire it to the tubes, as it will start them leaking sooner or later. Usually there are holes in the strip on which the hood rests which, may be used or holes may be made there without harm. The metal strip is apt to be noisy, cardboard is too readily broken, so that aluminum would seem to be the best material. It may be obtained at large hardware stores.

"To prevent freezing is also important. There are many anti-freeze preparations on the market, but they are said to contain chlorine, which attacks the solder in the radiator, causing serious leaks to develop. Glycerine is sometimes used, but it rots the rubber hose at top and bottom of the radiator. Alcohol is the only substance which does not harm any part of the system, but it has its disadvantages. It lowers the boiling point and evaporates readily, so that more has to be added from time to time. Use about one-third alcohol for the climate of Ontario. Add another pint occasionally. If water is added do not fill radiator to overflowing, as the expansion of the water will cause it to overflow, wasting more alcohol. Of course, any leaks must be repaired immediately.

"Keep the car in a warm garage over night not merely to prevent freezing, but to make starting easier. Also blanket the radiator carefully, covering every part, as that is most likely to freeze."

FEEDING GERMANY BY CARD

AMERICAN OBSERVER TELLS OF CONDITIONS.

Workman Still Goes to His Bench With a Full Dinner Pail But Children Are Suffering.

Leather is so expensive in Germany that only the upper class burger will be able to have real leather shoes this winter and starch is twenty marks a pound. But in spite of all this no German will go to work with an empty dinner pail.

The German Food Commission is the most uncanny thing in all the world. Like magic it produces a substitute for any article that is scarce, says an American newspaper woman who returned from Germany three months ago. The commission has it figured so that the nourishment shall be divided proportionately each week, and it also has figured out just what each person shall receive, for everybody does not receive the same amount of food. For instance, a man or woman that does manual labor gets more bread than a man or woman that works in an office. Persons more than sixty years get more cereals, and the ill get more butter and eggs. These persons get what they call "Zusats" cards, besides their regular cards.

Every one in Germany is getting thin, but still the German dieting system proves that much wornout statement that "we eat too much," for nine out of every ten Germans have never been so well in their lives as they have been since the cards have been introduced. You feel spry, active and energetic and the annoyance is mental rather than physical, for one is constantly thinking of things to eat.

Growing Children Are Suffering.

The ones that are really hurt by the blockade are the growing children and the thing that they lack and long for is sweets. Before the war one never realized what an important role candy played in the game of life. The Food Commission recognizes this and very often chocolate and puddings are provided for on the cards of children under sixteen years of age.

While the food prices have been soaring all over the world the prices in Germany are almost down to normal level, for everything that you buy on the cards is extremely cheap and everything that is any good is sold on the cards. Everything that is sold "ohne Karte," or without a card, is either no good or so expensive that the ordinary person cannot afford to buy.

The food situation is not the same all over Germany. In Berlin, Dresden, Hamburg and Leipzig they have less than in other places. Bavaria, the Rhine country and East Prussia are far better off, and in some of the small villages they do not even have a bread card.

The police see that every one gets his share of food. If a woman holds a servant girl's rations from her the girl can report it to the police, and the woman is fined. In a boarding house when the potatoes are passed around the landlady tells you whether you can take two or three potatoes, or one big potato and one small one. The food conditions are not always comfortable, but the food commission believes it has the things divided off so they will last for years.

"Send me a ton of coal." "What size?" "Well, a two-thousand-pound ton would suit me, if that's not asking too much."

ACCURACY IN BOMB-DROPPING.

Aviator Must Make a Careful Calculation Based on Speed and Height.

The difficulty of dropping bombs from an airplane with accuracy of marksmanship is manifest when one considers the fact that the bomb, after the aviator has released it, does not fall directly downward, but, still driven by the momentum of the flying machine, keeps on in the same direction and speed.

Suppose that the airplane is travelling sixty miles an hour. In the first second after being dropped the bomb travels forward eighty-eight feet while falling sixteen feet. In the next second it moves forward eighty-eight feet and falls sixty-four feet, and so on, descending in a parabolic curve. Thus, when it reaches the earth it is a long way from the place at which it was aimed unless proper allowance has been made by the aviator.

Obviously, to reach its mark, the bomb must be dropped several seconds before the flying man arrives above the target, the time allowance required depending on the speed of his machine and its height in the air.

Was It the Cow's Fault?

Supposing that you keep a cow giving five thousand pounds of milk in a year, for which you receive seventy dollars cash, how much profit does that cow make? This is not a riddle, but simply a query that every dairyman should be in a position to answer. Leaving aside the "higher accounting" side of revenue and expenses per cow—those persistent items of rent, interest, taxes, depreciation, etc.—and taking only income from milk or fat, and cost of feed, are you then in a position to say definitely that each cow you keep does make a good clear profit above feed cost?

Whether the feed is valued at forty or eighty dollars, whether the income is fifty or one hundred and twenty dollars, is there such profit that a fair return is made to you for the labor expended? For if revenue and expense just balance showing you no margin of profit at all, there must surely be something wrong; your labor has to be paid for.

Milk and feed record forms may be had free on application to the Dairy Commissioner, Ottawa, so that the profit made by each cow may be ascertained. Perhaps some cows would show profit if fed better; some won't. Many men in all provinces on the cow testing register at Ottawa show thirty and sixty dollars clear profit per cow above feed cost. You may have made more than that, if you made less, was it entirely the cow's fault?

An Insult To Royalty.

The ideas of the world change; what is unwelcome to-day becomes welcome to-morrow. There is an interesting bit of evidence of that in an amusing complaint, long forgotten and now brought to light by the Manchester Guardian.

When postage stamps first came into use in England, some persons declared that the effigy of majesty was too sacred to serve as a label for letters.

"Have you seen the stamps yet?" wrote one ardent loyalist in 1840. "This is the greatest insult the present Ministry could have offered the Queen."

King Ferdinand of Sicily took the matter so seriously that he had a special postmark made in the shape of a frame so that the officials could cancel the stamps without striking his portrait.

Experimental Arithmetic.

Schoolmistress—Well, what's the matter; has Johnny got the toothache?

Angry Mother—No, Johnny hain't got the toothache! He's suffering from your fool teachings. You told him he was to tell how long it would take him to eat twenty apples, if it took him one and a half minutes to eat one apple—and he's got stuck on the fifteenth!

What Keeps Us Warm?

We are accustomed to think that the sun warms the air, but it doesn't to any great extent—at all events, not directly.

Wash tea leaves before you use them to sprinkle over a carpet. If used just as they come from the tea pot they are likely to stain anything with a light ground.

WARTIME HYMN.

O Lord of Hosts and God of Love,
Ruler of earth and Heaven above,
In Jesus' name for help we plead;
Great are Thy mercies, great our need.

Dark clouds of war above us lower;
Grant us the aid of Heavenly Power;
We will not fear what may betide
If Thou, O God, be on our side.

Not for vain glory do we go
To war against the ruthless foe;
Fighting for righteous cause and just,
In Thee we put our hope and trust.

Free us from vengeful hate, we pray;
Vengeance is Thine; Thou wilt repay;
Thou will help them who suffer wrong;
Nor give the victory to the strong.

Our soldiers on the battle plain,
Our sailors on the perilous main—
May they be true of heart to fight
As serving Thee and in Thy sight.

Support the dying, Lord; and bless
The widows and the fatherless;
Bind up the broken hearts that mourn
For them who never will return.

Comfort the wounded in their pain;
The prisoners with Thy grace sustain.
Not unto us, but unto Thee
Shall be the praise for victory.

May they who govern us fulfil
Their task according to Thy Will.
Speed the glad day when wars shall cease,
And all the world may be at peace.
Amen.

W. C. Bennett.

Traffic in Oleomargarine.

A despatch from Ottawa says: An Order-in-Council has been passed upon the recommendation of the Food Controller allowing, on and after Nov. 15th, the manufacture and sale in Canada of oleomargarine and its importation free of duty. Suspension of the prohibition of its manufacture, import or sale is a war measure only, and will apply while the present abnormal conditions continue. The conclusion of such period is to be determined by the Governor-General-in-Council.

The recommendation of the Food Controller was made because the high cost of production and the demand for export were putting the price of butter so high that many people were unable to purchase it. To reduce the price arbitrarily would have been unfair to the producer. The Food Controller states that the dairy interests will not suffer by reason of the sale of oleomargarine in Canada.

A Conflict of Authority.

A Dutch journalist, Mr. J. M. de Beaufort, tells in his book Behind the German Veil of an amusing incident that interrupted a drive with a German staff captain through Johannisburg on the Prussian-Polish border.

In front of a house stood two soldiers, a private in the Landsturm about forty-five years of age and a beardless lieutenant. They seemed to be in hot argument, and suddenly the Landsturm man shook his fist in the officer's face.

The captain stopped the car, called the private to him and bawled:

"Man, have you lost your senses—threatening a superior officer? Do you know that you can be shot for that?"

"At your orders, sir," replied the Landsturm man jumping to attention. "He may be my superior officer, but he is also my son!"

Ashamed Enough.

Robert's mother was wont to close her reproaches with, "I'm ashamed of you as I can be," and the word ashamed, therefore, was constantly in his ears.

One day, after he had eaten up his little sister's candy, his mother said to him:

"Robert, did you eat Dorothy's candy when I distinctly told you not to?"

"Yes, ma'am," said Robert, in a tone of triumph, "and I'm just as ashamed on myself as I can be, so you needn't be ashamed of me at all!"

In most climates and with rich soil, the amount of grain sown to the acre should be larger than under arid or semi-arid conditions. Lodging will result from too thin seeding on rich, well-watered soil.

A delightful friendship is that which exists between the Royal House of Britain and the ill-starred Empress Eugenie. Queen Victoria was very fond of the Empress, and very recently the King and Princess Mary paid her an intimate little visit.

NEW USE FOR CELLULOID.

In Treatment of Wounds Received on the Battlefield.

One of the latest of the many interesting and novel accessories to the treatment of wounds received upon the battlefield is the celluloid dressing. In addition to protecting the injured part, it prevents the bandages from adhering to the wounds. Ordinary bandages are likely to cling, not only making it difficult to remove them, but also inflicting unnecessary pain, and, if the adhesion is pronounced, appreciably retarding the process of healing. The celluloid device, however, entirely obviates these disadvantages.

The dressing, which is somewhat like the shield used for protecting the arm in vaccination, is perforated with small holes so that it resembles a finely meshed sieve. The surgeon treats it antiseptically, places it over the wound, and then applies the ordinary bandages in the usual manner. The perforations in the celluloid allow the pus to escape, and the surrounding cotton absorbs it. When the bandage is removed, the shield falls clean from the injury, which has been subjected to no aggravation.

Wounds so protected heal more quickly and have a cleaner appearance than those treated in the ordinary way. The shield also affords a considerable measure of comfort to the patient by saving him the pain that pressure upon the wound causes; the celluloid sheath is sufficiently strong to act as a guard. Another advantage that seems to assure its extensive use as a surgical dressing is the fact that it has proved well adapted to the process of saline irrigation in the treatment of wounds.

WAR OFFICE TAKES OWN FILMS.

British Battle Pictures Will Be Sent to Allied Countries.

To its thousand and one activities the British War Office has now added the ownership and management of a British film business. The entire control of the issue of what is known to the moving picture world as the "Topical Budget" has passed into the hands of the Army Council for the duration of the war.

By the unwritten law of Whitehall, the War Office cannot "go into business," so the difficulty of owning and controlling this film business was obviated by the appointment of a committee of practical men, responsible to the War Office.

Starting as a strictly national survey of war's doings, the War Office "Topical Budget" has blossomed forthwith into an international concern by a system of interchange with the Allies, so that now it presents to the British public scenes from every front on which the Allies are fighting, except the Russian.

British pictures will be distributed through the War Office to France, Italy, Portugal and all over the British Empire as well as to the United States. Neutral countries, too, are to be organized for the distribution of these same pictures, and in return certain pictures from neutral countries will be sent to London for distribution through the British Isles.

The official film photographers will not confine their work to the front. They are also to take pictures of all national events, naval, military or otherwise, happening anywhere in the British Isles.

Asset in Camp Dishwater.

Lieut. Gordon B. Black, formerly of the "Western Lumberman" staff, Vancouver, was recently promoted from the Canadian headquarters staff at Shorncliffe to the position of assistant to the Director of Timber Operations in Great Britain and Scotland, with the rank of captain, which was conferred in recognition of the high efficiency introduced by him in the task of supplying the needs of the various Canadian hospitals in England. Capt. Black writes that the conservation of food in the foresters' camps in England and Scotland is a live issue, as instanced by the fact that a new arrival was sent to the guard house for twenty days for throwing away a "hunk" of bread instead of placing it in the receptacle provided for food remnants. As a further instance of the saving methods in vogue, Capt. Black notes that the dishwater in all forester dining camps is skimmed twice. The grease thus saved is sold to the Imperial Munitions Board each week, the monthly revenue amounting to a handsome total.

NEW HART HOUSE CORPS FORMED

WORK OF MILITARY HOSPITALS COMMISSION.

Organized to Keep the Crippled Tommies Working at the "Cure-Machines."

A Voluntary Workers Corps, made up of young Toronto women who wish to do their bit in aiding the recovery of the boys who have been disabled in service overseas, has been formed by Dr. E. A. Bott, head of the functional re-education work being carried on by the Military Hospitals Commission at Hart House, Toronto.

These young women will be taught the use of special corrective machines and when they have been trained, will be given the charge of patients who must be encouraged to keep at the apparatus work as part of their treatment.

There are numerous machines at Hart House, scientific wonder-workers in performance, but so simple in appearance as to deceive the man who associates scientific apparatus with finely polished steel and delicate springs.

Slow But Sure.

Men who have been discharged by the surgeons are sent here to limber up stiffened joints, to restore muscles and put their limbs back into working shape when surgery has done all that it can to restore them.

Long practice on these machines is required and the patient's interest is apt to lag and his courage fail before recovery is complete unless someone works with him. It is to do this sort of work than the voluntary workers have been enlisted.

Cheerfulness All Important.

The therapeutic value of a cheerful spirit is recognized in every hospital, but nowhere is it more to count than in the curative workshops of Hart House where a man's own endeavors are vitally important to his recovery.

There are at present over many men receiving treatment at the institution. The personnel of the establishment is constantly changing, of course, as cured cases are dismissed and new men come for treatment.

The work is largely divided into the apparatus room, but in the gymnasium where the cases of flat feet, etc., are treated, there are curative games, and class work for men with afflictions in common.

Special Game Rooms.

Such games as squash racquets, basket ball, tether tennis, and ping pong have a distinct therapeutic value for the treatment of arm and leg cases, and special rooms are provided for each. In these several men work together and competition keeps alive the enthusiasm for which a man working alone needs the stimulating interest from an assistant.

When Man Is Most Efficient.

In The American Magazine Dean Herman Schneider of the School of Engineering of the University of Cincinnati says:

"A man is most efficient when he is doing the work that gives him the greatest satisfaction. From the lowest to the business executive every man should get three things out of work—a decent living, development and discipline and satisfaction in the doing.

"If your job gives these to you give back to it the best work of your hand and brain. If it fails to give you these face the fact that you are a misfit and seek your appointed place. You have no right to let life remain separated from its two handmaids—liberty and the pursuit of happiness."

Napoleon's Mistake.

Napoleon was a master of flaming sentences as well as of the science of war. This sentiment, uttered at St. Helena, and quoted by James M. Beck in an article on the war, might be emphatically echoed by the allies to-day: "I made the mistake of my career, when I had the opportunity, that I did not remove the Hohenzollerns from the throne of Prussia. As long as this house reigns and until the red cap of liberty is erected in Germany, there will be no peace in Europe."

The Doings of the Duffs.

Watch Your Sneeze!
It may be the forerunner of bronchitis or a bad cold. It is nature's warning that your body is in a receptive condition for germs. The way to fortify yourself against cold is to increase warmth and vitality by eating **Shredded Wheat**, a food that builds healthy muscle and red blood. For breakfast with milk or cream, or any meal with fresh fruits.

Made in Canada.

Design for Fall Suit

The suit of many pockets has a charm all its own. This coat may have four of them, what more could you want? McCall Pattern No. 8041. Misses' Coat Suit. In 4 sizes; 14 to 20 years. Price, 20 cents.

This pattern may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

SEED GRAIN AND POTATOES.

Dominion Cerealist Will Distribute Samples From the Ottawa Experimental Farm.

By instructions of the Hon. Minister of Agriculture a free distribution of superior sorts of grain and potatoes will be made during the coming winter and spring to Canadian farmers.

The samples of grain for distribution will consist of spring wheat (about 5 lbs.), white oats (about 4 lbs.), barley (about 3 lbs.), and field peas (about 5 lbs.). These will be sent out from the Central Experimental Farm, Ottawa, by the Dominion Cerealist, who will furnish the necessary application forms.

A distribution of potatoes in samples of about 3 lbs. will be carried on from most of the Experimental Farms, the Central Farm supplying only the province of Ontario.

All samples will be sent free by mail. Only one sample of grain (and one of potatoes) can be sent to each applicant. As the supply of seed is limited, farmers are advised to apply very early.

There's Superior Flavor To **POSTUM** as a table beverage.

A package from the grocer is well worth a trial, in place of tea—especially

When Tea Disagrees!

THE TANK'S ELDER BROTHER.

Three Hundred Years Ago a Similar War Engine Was Devised.

Jules Verne in "Twenty Thousand Leagues Under the Sea" gave an inkling of the present day activities of the submarine boats. H. G. Wells predicted the work of the air raiders, and now a historical delver comes forward with the statement that the tank had a forerunner in the sixteenth century. John Napier, Laird of Murchison, the mathematician who invented logarithms, devised a war engine something after the style of the tank.

Napier confided to Bacon's elder brother certain "secret inventions" for the purpose of confounding "enemies of God's truth." They included burning mirrors and a chariot of metal double musket proof, the motion of which was controlled by those within and from which shot was discharged through small holes, "the enemy being shaned and uncertain what defence to make against a moving mouth of metal."

This description sounds much like the early type of tank and the "confounding" of the enemy, as predicted by Napier, was to have been accomplished by the tanks of the British when they first appeared among the Germans. Napier's engine never went into action, for the Scottish inventor directed that his weird instrument of war be kept secret unless necessity compelled its use. Napier, who was born in 1550, died in 1617.

BLOOD-MAKING MEDICINE

It took centuries for medical science to discover that the blood is the life. Now. It is known that if the blood were always abundant, rich and pure, very few people would ever be ill. It was not until the end of the 19th century that an instrument was invented for measuring the red part of the blood. Then doctors could tell just how anaemic a patient had become, and with medicine to make new blood the patient soon got well.

All the blood in the body is nourished and kept rich and red by the food taken daily, but when, for any reason, a person is run down and cannot make sufficient blood from the food to keep the body in health, then a blood-making medicine is required. The simplest and very best of blood-makers suitable for home use by anyone, is Dr. Williams' Pink Pills. When a course of these pills is taken their good effect is soon shown in an improved appetite, stronger nerves, a sound digestion and an ability to master your work and enjoy leisure hours. For women there is a prompt relief of, or prevention of ailments which make life a burden. As an all-round medicine for the cure of ailments due to weak, watery blood no medicine discovered by medical science can equal Dr. Williams' Pink Pills.

You can get these pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

THE LAND OF HEART'S CONTENT

(Newfoundland, the oldest British Colony, has given a large proportion of her manhood to the Great Cause, and out of her small population has suffered comparatively heavy losses. The regiment has gained honor in France and in Gallipoli, and the Newfoundland R.N.R. has played no small part at sea.)

There lies a Land in the West and North
Whither the bravest men went forth,
And dashed not by fog nor ice
They reached at last to a Paradise.
Full two thousand miles it lay
Washed by a sea of English grey,
And they named it Newfoundland at sight;
It's rather the Land of Heart's Delight!

* * * *

Ah! Men must know you to understand.
Have seen the cliffs of your rugged land,
Have seen the mist come rolling down
The hills that gaured the glistening town,
Have seen the schooners creeping in,
And smelt the homely smell within
The fishing port asleep,
And in the rivers flowing free
Through the spruce woods to the sea
Have known the pools at break of day
Where silver-coated salmon play,
And seen the tangled river's brink
Where caribou come down to drink,

And beaver's build and creep.
All this is shared with those who fell.
It is the Land they loved so well.
For many a soldier lying low
In some French village-battle glow,
Seen before his blood is spent
The sunset over Heart's Content.
—P. E. Goldsmith in London Times.

Practising Economy.

Donald McAllister, a Scottish farmer, was going to town for a day or two, and his daughter Maggie had a weary time listening to the hundred-and-one instructions he gave her as to care and economy.

"Mind the coal," "Don't waste any food," "Don't sit up burning light," &c.

Finally he set off, but in a moment he was back with a parting admonition:—

"An', Maggie, there's young Angus. See that he dosena wear his spectacles when he's no readin' or writin'! It's needless wear an' tear!"

ASPIRATIONS OF YOUTH.

Higher, higher will we climb,
Up the mount of glory,
That our names may live through time
In our country's story;
Happy when her welfare calls
He who conquers, he who falls!

Deeper, deeper let us toil
In the mines of knowledge;
Nature's wealth of learning spoil;
Win from school and college,
Delve we there for richer gems
Than the stars of diadems.

Onward, onward, will we press
Through the path of duty;
Virtue is true happiness,
Excellence true beauty.
Minds are of supernal birth,
Let us make a heaven of earth.
—James Montgomery.

Minard's Liniment Cures Garget in Cows

Quite Candid.

Teddy had been invited out to tea. He wanted to have the afternoon off from school, but his mother would not hear of it. As his bedtime was 7 o'clock he had rather a short visit, and as he was leaving his hostess said cordially:

"I'm so sorry you've been able to stay such a little while, dear."

Teddy remembered his mother's injunctions to be polite on all occasions, and answered, sweetly: "Oh, it's quite long enough, thank you."

MURINE FOR YOUR EYES Granulated Eyelids, Sore Eyes, Eyes Inflamed by Exposure to Sun, Dust and Wind quickly relieved by Murine. Try it in your Eyes and in Baby's Eyes. No Smarting, Just Eye Comfort. **Murine Eye Remedy** At Your Druggist's or by Mail. Murine Eye Salve, in Tubes, 25c. For Book of the Eye, Free, Write Murine Eye Remedy Co., Chicago.

Swedish Stores of Pulp.

No less than 200,000 tons of wood pulp are said to be stored at Swedish ports awaiting sale or shipment. Much of the pulp held in storage has been bought and paid for by British dealers, but cannot be delivered owing to the Swedish embargo on shipments of wood pulp to that country. American buyers have abandoned their efforts to purchase wood pulp in Sweden. The Swedish Government now requires a guarantee that Swedish pulp exported shall be used in the country to which it is first shipped.

It is a good plan to get bulbs in the ground without further delay and in pots for window culture.

PAIN? NOT A BIT! LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house.

Children's Belief in Fairies.

To the children fairies stand for all the wonderful and unpredictable possibilities of life, for all the magic of it, its charm of unexpectedness, says the Atlantic Monthly. A child is a bit puzzled by the inevitable; in the fairy world it does not exist. In that world he slips away from the world of grown-ups, with its endless consequences remorselessly hounding the gay, irresponsible little child doings. He loves the grownups and it is not from them that he wishes to escape, but from their world, their difficult, unyielding world.

THE FALL WEATHER HARD ON LITTLE ONES

Canadian fall weather is extremely hard on little ones. One day it is warm and bright and the next wet and cold. These sudden changes bring on colds, cramps and colic, and unless baby's little stomach is kept right the result may be serious. There is nothing to equal Baby's Own Tablets in keeping the little ones well. They sweeten the stomach, regulate the bowels, break up colds and make baby thrive. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Mubilizing.

"Look sharp!" said the pencil,
"All right," said the rule—
"With my best foot put forward.
I'm ready for school!"

"Fall in!" cried the blankbooks,
"Right dress," bawled the pen;
"Forward, march!" cried the rubbers,
"We're needed again."

A druggist can obtain an imitation of MINARD'S LINIMENT from a Toronto house at a very low price, and have it labeled his own product.

This greasy imitation is the poorest one we have yet seen of the many that every Tom, Dick and Harry has tried to introduce

Ask for MINARDS and you will get it

That Held Him.

"Dear Clara," wrote the young man, "pardon me, but I'm getting so forgetful. I proposed to you last night, but really forgot whether you said yes or no."

"Dear Will," she replied by note, "so glad to hear from you. I know I said 'no' to some one last night, but I had forgotten just who it was."

Ah! That's the Spot

Sloan's Liniment goes right to it. Have you a rheumatic ache or a dull throbbing neuralgic pain? You can find a quick and effective relief in Sloan's Liniment. Thousands of homes have this remedy handy for all external ills because time and time again it has proven the quickest relief.

So clean and easy to apply, too. No rubbing, no pain, no inconvenience. Just a few drops on the affected parts and relief comes. If you once use Sloan's Liniment, you will never be without it.

Generous sized bottles, at all druggists, 25c., 50c., $1.00.

Sloan's Liniment KILLS PAIN

Not Quite Certain.

Six-year-old Phyllis was a lively youngster who brought a note from mamma to grandmother one day.

"Will you come over this afternoon, dear?" asked grandma.

The little one stopped to think a moment, then answered:

"Well! don't you 'spect me and don't you unspect me; I may turn up and I may not," And away she flew.

MONEY ORDERS

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

Horses and mules are estimated annually to consume 27 per cent. of the American corn crop.

Minard's Liniment Cures Colds, &c.

The world's finest bronze statuary is cast in sand found in France that contains about 80 per cent. silica and 20 per cent. alumina.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to transform rough, red hands.

CUTICURA HEALS BAD DISFIGUREMENT

Very Itchy. Burned at Night. Could Scarcely Sleep. Healed in One Week.

"My face became very red and swollen and I developed watery blisters. These first got very itchy and used to burn so that at night I could scarcely sleep. Later the blisters broke out forming hard scales and my face was badly disfigured. Then I used Cuticura Soap and Ointment and in about a week's time the Ointment scales and scabs were healed. I was completely healed." (Signed) Lloyd Brady, Breckenridge, Que., May 25, 1917.

Skin troubles are quickly relieved by Cuticura. The Soap cleanses and nourishes, the Ointment soothes and heals.

For Free Sample—Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

City Eye Specialists Tell How To Strengthen Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to learn that Bartons and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and many who once wore glasses say they have thrown them away, one straight week using it. "I was almost blind. Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for a few days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eye strain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the flattering leaves on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Beck, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and ophiphora. Her eyes when put suggested had the dull, suffering appearance common to such cases. Having run out of her medicine a friend suggested Bon-Opto. She used this treatment for not only overcame her distressing condition, but strange and amazing as it may seem, strengthened her eyesight that she was able to dispense with her distance glasses and her near sight and presbyopia left her, in this instance I should say 'straight way' using it." I have since verified the efficacy of this treatment in a number of cases and have found the eyesight improve from 25 to 75 per cent in a remarkably short time. I can say this works more quickly than any other remedy I have prescribed for the eyes."

Dr. ——, specialist of wide experience, says: "I have treated in private practice a number of serious eye troubles with Bon-Opto and am able to report ultimate recovery in both acute and chronic cases. Mr. B. came to my office suffering with an infected eye. The condition was so serious that an operation for enucleation seemed imperative. Before resorting to the operative treatment I prescribed Bon-Opto and in 24 hours the secretion had lessened. Inflammatory symptoms began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme conversant strabismus (cross eyes) escaped the surgeon's knife by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instil Bon-Opto after removal of foreign bodies and apply it locally to all burns, blears and spots on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is restored more quickly, lessen the number of cases of disordered glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions produced a surprising service. I found my eyes for insensibly strengthened, so much so I have put aside my glasses without discomfort. Several of my colleagues have also used it and are delighted as to its results. In a few days, under my observation, the eyes often astigmatic cases were so improved that glasses have been discarded by the patient."

Eye troubles of a far reaching may be wonderfully benefited by the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many have saved their sight that have cared for their eyes in time.

Note: A city physician to whom the above article was submitted, said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituent ingredients are well known to ocularists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or blight glasses. I can highly recommend it in case of weak, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, wind, dust or wind. It is one of the very few proprietary items I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including general stores; also by G. Tamblyn and T. Eaton & Co., Toronto.

WOMAN SICK TWO YEARS

Could Do No Work. Now Strong as a Man.

Chicago, Ill.—"For about two years I suffered from a female trouble so I was unable to walk or do any of my own work. I read about Lydia E. Pinkham's Vegetable Compound in the newspapers and determined to try it. It brought almost immediate relief. My weakness has entirely disappeared and I never had better health. I weigh 165 pounds and am as strong as a man. I think money is well spent which purchases Lydia E. Pinkham's Vegetable Compound."—Mrs. Jos. O'Bryan, 1755 Newport Ave., Chicago, Ill.

The success of Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, is unparalleled. It may be used with perfect confidence by women who suffer from displacements, inflammation, ulceration, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, dizziness, and nervous prostration. Lydia E. Pinkham's Vegetable Compound is the standard remedy for female ills.

TWELFTH OF BRUCE

Guess we are having Indian summer these days.

Quite a number from here attended Mr John McArthur's sale.

A meeting was held in the school house on Friday night to wind up the beef ring for this year.

We are sorry to say that Mrs Duncan Beaton's baby is very sick with pneumonia at present.

Mrs R Grant, Miss May and Master George from Paisley were visitors at Mr. John Cumming's.

Mr Ed Barnes Sundayed at his home here.

Mrs D McGillvary has the sympathy of the community in her recent bereavement.

ELORA ROAD NORTH

Some of our young men have been down to Harriston for medical examination. We must congratulate most of them upon being placed in Class A and so bringing credit to their community.

Mr W A Miller has gone west on a business trip. Mrs Miller is visiting at Owen Sound until his return.

Miss Lily Beech was home from Toronto for a few days.

A Hallowe'en Social was held at Mr Andrew Rowand's by the Dunblane Red Cross Society last Wednesday night. There was a large crowd in attendance and the affair was a success from almost every point of view.

TURNERS

Mr Hall of Guelph has returned home.

Mrs Eby of Elmore is visiting her son Mr Louis Eby.

The many friends of Miss Daisy Pollock will be glad to know that she is improving after her operation.

Mrs A Pace spent a few days with her daughter Mrs R Pollock.

Mr A Munro has his new elevator in working order now and it is quite a change for the farmers to be throwing the grain down the hole and lifting it up to the bins.

GLAMIS

The Red Cross Society met on Friday night and packed thirty boxes for overseas.

Mrs Carr of Paisley spent a couple of days at Jos Cunningham's.

Rev Mr Reith went to Toronto on Thursday, accompanied by his little niece who was spending a few weeks with them.

Mr Bell of North Bruce was the speaker in St Paul's church on Sunday in the absence of the pastor, Rev Mr Reith.

Mr Walker and sister, of Teeswater, were visitors at Mr Henry Purdy's on Sunday.

Mrs Francis of Toronto is visiting at the home of her brother Mr Angus Campbell, also at Mr Murdoch McKay's.

The Free Methodists held their quarterly meetings last week and part of this week Rev Mr Eagle, district elder of Hamilton conducted them.

Mrs Cartwright of Milton who was a guest of the Misses Howson for sometime returned to her home.

The Women's Mission Circle were disappointed in not having Rev Mr Holmes of Goderich at their thank-offering meeting. Owing to the state of the roads he was unable to get here. Rev Mr McClung gave a good address on missions, also Mr McCauley.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

PINKERTON

Mr R L Garland of the G T R staff at Palmerston, spent Sunday at his home here.

Mr and Mrs H D Pitcher of Toronto visited at Mr Adam Reids' last week.

The Bradley Shooting Club held their annual "shoot" last week. Horace Moffat and Lloyd Pinkerton were the opposing captains, the former's side winning by six points. In the evening the contestants met at the home of Mr Isaac McFadden and spent an enjoyable evening, dancing and card playing.

After a lingering illness of some years, Miss Jane Cruickshanks passed away at the General Hospital, Guelph, on Sunday, Nov 4, after a serious operation had been performed. The deceased was 51 years old. The funeral took place from the home of her brother, Mr John Cruickshanks to Douglass Hill Cemetery, conducted by Rev Mr Gale.

EBENEZER

Pte's George and Wilbert Martin have been home on their last leave before going east for further training.

Mrs J H McFadden is visiting friends in Toronto and Hamilton.

Reeve Case and Robt. Oswald and C J. Halliday of Chesley, of the Elderslie S. S Ass'n Executive, made a visit to Ebenezer school on Sunday. Pres. Case and Mr Halliday gave inspiring addresses on the importance of keeping up the attendance and the organization of classes in the schools.

Mr Calvin Crawford, of the 12th con., bought up a carload of potatoes last week, shipping from Dobbinton. Quite a few from here sold him some of their bumper crop of tubers.

Children Cry
FOR FLETCHER'S
CASTORIA

WILLISCROFT

Mrs Brill and Miss Harrison, of Port Elgin, were visiting at D H Sparrow's this week.

Mr Louis Davis has taken unto himself a helpmate in the person of Miss Olive Robb. The marriage took place in Toronto on Oct 27th, and the happy couple have taken up their residence on the Davis homestead. Everybody in the old settlement wishes them every happiness and prosperity through life.

—Walkerton Council has passed a new Traffic By-Law which makes it an offence for any horse or vehicle to remain standing on the streets of the town longer than twenty minutes, unless loading or unloading goods. Business men of the town are protesting against such restrictions. They fear that farmers will go to other towns to trade rather than be obliged to observe regulations that cause their rigs off the streets in such a short time.

EXEMPTION TRIBUNALS

MILITARY SERVICE ACT 1917

For the Attention of Class One Men

The location of The Exemption Tribunals in this district is as follows:—

Tribunal Ont. No. 34—Paisley
Ont. No. 33—Walkerton
Ont. No. 29—Port Elgin

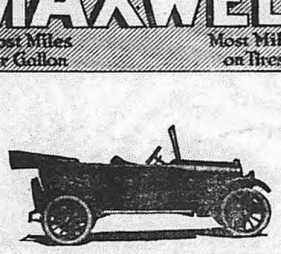
These Tribunals will commence to deal with claims for exemption on November 8th.

All claims for exemption must be made not later than November 10th.

Those who make or have made their claim for exemption in writing through the Post Office will receive notice by registered letter of date on which their claim will be dealt with.

Those who neglect to make use of the Post Office must present themselves in person at a Tribunal on November 8th, 9th or 10th, and they will then be informed as to when their claims will be dealt with.

Reports for service must be made on or before November 10th through the Post Office.



Severe penalties are provided by law for failure to report for service or claim exemption as above.

Issued by
The Military Service Council.

MAXWELL

Most Miles per Gallon — Most Miles on Tires

$1045
F. O. B. WINDSOR

Straight and sure—like an arrow that flies from the bow and imbeds itself in the bull's-eye—

So have the Maxwell builders fixed a price for their product—$1045—which makes it possible for them to say:

"Below this figure there must be something lacking which we have put into the Maxwell—efficiency, durability, economy, comfort, beauty or standard equipment.

—and above this figure we could give you no greater practical utility—only larger size or richer and fancier furnishings."

This is the scientific fact—proved and demonstrated by one of the giants of the motor car industry in years of production on an immense scale.

And we stand firm on this finding of the Maxwell builders.

We believe the Maxwell to be the BEST MOTOR CAR INVESTMENT possible today.

What Will Canada's Answer Be?

OVER in the sodden trenches amid the bursting shells and the roar of artillery where Canada's boys are fighting and dying.

—they are waiting for Canada's answer when the sale of Victory Bonds begins.

CANADA'S soldiers expect that we at home will put up the millions they need to keep on fighting,

—the millions they must have to win Victory for freedom, home and Canada.

What answer will Canada make?

What answer will you make?

Shall it be said that Canada spares not her sons from the sacrifice of battle, yet withholds her dollars to give them victory?

Rather will it be said that Canada once more, for the fourth time in three years, cheerfully puts up her millions upon millions for the cause of freedom, righteousness and justice.

Canada's answer must be,

—that the Canadian hand to the plow of Victory holds steadfast and firm.

—that Canada is in deadly earnest when she says the "last man and the last dollar."

That is the answer Canada will give to our boys in the trenches, our kinsmen in Britian, and our Allies everywhere.

That is the answer we will give to the Huns who thought and said that Canada would desert the Empire before she would fight or pay.

Every bond you buy is an answer. Let the millions of answers from Canada's loyal men and women make a chorus of Victory to ring around the world.

Canada's Victory Loan Campaign opens on Monday, November 12

GinDills
FOR THE KIDNEYS
SUCCEEDED

Where Travel and Change of Climate Failed to Restore Health

Hamilton, Ont., Apr. 10th, 1917.

"About four years ago I wrote you of my condition from Muscular and Inflammatory Rheumatism and Kidney Trouble and my efforts through travel and change of climate to rid myself of these painful ailments, and how I only found relief in Gin Pills after spending a lot of time and money in foreign lands.

"Since then Gin Pills have been my sheet anchor. I find in advancing years a tendency of the kidneys to get out of order more easily than formerly but a few doses of Gin Pills puts them right and wards off other and more serious trouble. When I remember what I endured through Kidney Trouble and Rheumatism and the freedom from these which I now enjoy, I feel it not only a duty but a pleasure to recommend Gin Pills for Kidney and Bladder Troubles to my thousands of personal friends throughout Canada to whom I am well known as a commercial traveller of over forty years' active service."

(Signed) W. G. REID.

217

Gin Pills sell for 50c a box or 6 boxes for $2.50 at all good dealers. Sample free if you write to National Drug & Chemical Co. of Canada, Limited, Toronto 1or to United States address, National Drug & Chemical Co. of Canada, Inc., 202 Main St., Buffalo, N. Y.

—Soldiers give their lives, others are only asked to lend their money. Buy Victory Bonds.

The Death of Miss Davidson

On the 19th of October, death entered the home of the Davidson family, and claimed as its victim, Mary Davidson. Deceased has resided at Aberfoyle for over half a century. Her father, James Davidson, was one of the first settlers on the banks of the Saugeen, where the family now have a picturesque home on the upper end of the 4th. Miss Kate Beaton of the 12th of Bruce, shared with him the ups and downs of pioneer life, and to them were born 12 children, four boys and eight girls, nine of whom still survive. All were home when their sister died except Peter in Victoria, Mrs McKenzie in Calgary. Miss Susan was in Calgary, but was able to be here for the funeral. Deceased was possessed of a very amiable disposition and leaves behind a memory that will long be cherished by all who had the privilege of her acquaintance. Her parents died a few years ago. The funeral on Thursday was largely attended. Dr. McDougall conducted the services at the house and grave.—Times.

Three Days More to Fill Out Cards

Men between 20 and 34 years have just three days more to comply with the Military Service Act by filling out their service cards. It does not matter whether a man is sick or well, whether he has undergone medical examination or not, failure to fill in and return one of the cards will bring the penalty all the same. The time for repenting for service or applying for exemption expires on Nov 10th. After that date the man who has failed to return a card will be in the position of a soldier absent without leave. The penalty is a fine of from $15 to $500, after payment of which one is still liable for service. After Nov 10th it will be the duty of the military representative to discover and report all who have failed to comply with requirements of the Military Service Act. Don't blame him. He is himself in the position of a soldier who must obey orders. Ignorance of the law will not be an excuse. The best course for any eligible man is to properly fill in and return a card. That is the only way to avoid serious trouble.

Of all overworked women probably the housewife is the hardest worked. She has so much to attend to, with very little help. Her work can be lightened if she knows the value of system and she should try and take a short rest in the daytime. A physician who became famous almost around the world, Doctor Pierce, of Buffalo, N. Y., the specialist in woman's diseases, for many years practiced medicine in a farming district. He there observed the lack of system in the planning of the work.

If it is a headache, a backache, a sensation of irritability or twitching and uncontrollable nervousness, something must be wrong with the head or back, a woman naturally says, but all the time the real trouble very often centers in the organs. In nine cases out of ten the seat of the difficulty is here, and a woman should take rational treatment for its cure. The disorder should be treated steadily and systematically with Dr. Pierce's Favorite Prescription.

For diseases from which women suffer "Favorite Prescription" is a powerful restorative. During the last fifty years it has banished from the lives of tens of thousands of women the pain, worry, misery and distress caused by these diseases.

If you are a sufferer, get Dr. Pierce's Favorite Prescription in liquid or tablet form to-day. Then address Dr. Pierce Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.

Yonge and Charles Sts., Toronto

We are constantly asked to fill positions at from $15 to $100 per month, and others at from $1,200 to $2,000 per annum. It pays to get a business education if you can, and the right kind such as may be had at all times in this school. Right now is an excellent time to commence a course. Get a free catalogue.

W. J. ELLIOTT, Prin.

—Since the United States decided to enter the war, some of the railways of the republic are paying a debt that they probably never expected to be called upon to pay. As in Canada the U S government gave some railways vast tracts of lands as a means of raising the capital necessary to build them, but stipulated that in return the roads should always transport troops and army supplies either free or half rates. It is estimated that under that agreement the government will save fifty millions in transportation charges in the present year alone.

—A subscription to our Victory Loan is not a sacrifice. It is everybody's duty.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

FREE WAR MAP

A good war map helps one to follow and understand the war news. The Family Herald and Weekly Star of Montreal offers a fine war map in four colours about 2 1-3 feet x 3¼ feet in a neat cover free of charge to all who subscribe to that great paper at $1.25 a year. The map alone would cost as much as the whole charge in most stores. The Family Herald is greatly improved this year and is wonderful value. It is a credit to Canadian journalism. It should be in every Canadian home at the price offered, $1.25 a year, with the great war map free.

—Mr and Mrs Wm Walker are home from a trip to the west.

—Miss Lottie McKinnon, 10th Elderslie, is home from Edmonton.

—Mrs H McKerracher is in Toronto visiting her sister, Mrs Adams.

—Miss Mina Burrell, of and E derslie spent a week with friends in town.

—Mr Wm Dent signed up with the 49th Battery of Artillery at Guelph last month.

—Miss Walsh, of Chatsworth, is the new teacher in Jackson's school (No 8) Greenock.

—Mr W J Goheen of Pontypool, purchaser of the Putnam residence, was in town last week.

—Dr Jas Brown and Miss Mina Brown came up last week from Toronto to visit at their home at Lockerby.

—Mr John Nelson, of Vancouver, was a week-end visitor at the home of his brother, R J Nelson, V S, Greenock.

—Harold Ross, son of A. J. Ross, hardware merchant of Wingham and formerly of Cargill, has joined the aerial corps.

—Mrs. Buchanan, Inkerman St., gave $2.00 to the Red Cross collection, but was credited with only 50c in the list printed.

—A large portion of the Victory Loan will be expended in purchasing food and supplies for our Armies, from the farmers of this County.

Methodist Church

Sermons will be preached next Sunday by

Rev. E. J. Flagg, M.A., B.D.

of Moorefield, at morning and evening services

—Mr and Mrs J L Gilpin of Owen Sound are visiting at J A McNeill's, Lockerby. Mr and Mrs M O Foster and Miss Olive, Mr and Mrs C Langford of Owen Sound were visitors on Monday.

—Mr Herman Boettger has bought the J W McKinstry farm, on the corner of the Goderich road and 2nd con. Sungeen. He gets possession in March, and intends going on the property.

by the Rev. V. L. Shantz (Chesley), commencing

Sunday, Nov. 18th

Song Service each evening at 7.30

Everybody Welcome

Memorial Service Postponed

As Rev Mr Crighton will be at Moorefield on Sunday, the memorial service in honor of the late Corp Pearce will not be held until Sunday evening, Nov. 25th.

Appendicitis Operation

Mr John W. McPhee, son of Mr Angus McPhee, Elora road north, was taken to Walkerton hospital a few days ago, and operated upon for appendicitis, by Dr. Hall and Dr. Gege. It will be remembered, the patient came down from the west a few weeks ago after enlisting with the flying corps, but was rejected as physically unfit.

Soldier Home

Pte Gordon Daniel, son of Mr Jos Daniel, Queen St north, arrived home on Tuesday night. Gordon has been off duty for some time owing to his health breaking, under the hardships of soldier life, and is now on furlough. He was on the transport service at the front. Those of our citizens who knew he was on the way were anxious to give him a hero's welcome, but it was learned that he and his friends preferred a quiet home coming, and no demonstration was made.

The Late Mrs Maxwell

The funeral of the late Nancy Ellen Majury, beloved wife of Mr Edward Maxwell, Elora Road south, on Thursday last was attended by a large number of sorrowing friends and sympathizers. The deceased was the third daughter of Mr and Mrs E. Majury, and had been married about ten years. She was in her 36th year, and her death in the prime of a useful life was due to an attack of pleurisy and pneumonia. The utmost sympathy is felt for the sorrowing husband and family of one girl aged 9 years and two boys aged 7 and 3 years. Mrs Maxwell was highly esteemed among her large circle of friends and acquaintances.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

The Sheriff's Sweetheart

By H. M. Egbert.

(Copyright, by W. G. Chapman.)

I.

"Ain't satisfied with me? Why not? Did I ask to be elected sheriff? Didn't the town come to me and say they'd decided to nominate me?" asked Dick Farley.

He looked straight into the puckered eyes of old Jim Brant, who lowered his own unsteadily.

"You understand me, Dick, I only come to you as your friend," said the old man. "I thought there was something gone wrong between Doris and you, and I thought maybe she'd—she'd heard what folks are saying."

"What are they saying?" demanded Dick.

"Why, that they guess you're taking your time about tackling Sancho," responded Brant.

Dick flushed angrily. He had been sheriff six months, and the notorious outlaw was still at liberty. Somewhere in the hills beyond the desert Sancho had his quarters. He had descended on a ranch the week before and lifted a pure-blooded stallion. It had been Dick's business to arrest him; but how could he hunt him single-handed among the hills the other side of a blazing desert in midsummer?

Dick had not been idle. He had laid his plans through Lina, the dancer, Sancho's friend; and through her he knew the outlaw would come day fall into his clutches. He realized that public feeling had grown chilly; the people wanted something to be done, and done by him at once, alone.

Doris and he had been as good as engaged two months before. Dick had noticed the change in the girl, but he had not ascribed it to public gossip. Stung by old Brant's insinuation, he went straight to the house. Doris looked up from the porch and nodded.

"What's the matter, Doris?" Dick blurted out, coming close to her.

"The matter?" parried the girl.

"You've changed," said Dick hotly. "You are different from what you used to be."

"Did I ever give you the right to speak to me like that?"

"I hoped for it," said Dick, twisting his hat nervously. "It's because of what people are saying, isn't it?"

"What are they saying?"

"That I'm afraid to tackle Sancho. You pay heed to that sort of gossip, do you, Doris?"

"I am not answerable to you," Doris retorted. "You can go away now and not come back till you are feeling better."

"If I go I shall not come back till you send for me."

"Please yourself," she replied, with affected indifference.

Dick turned without a word and swung out into the road that led downtown. He could not see the flood of tears that followed his departure. Nor could he know that it was his friendship with Lina, retailed by the town gossips, that was the cause of the change in Doris' attitude toward him.

Lina had taunted Dick of late. Why didn't he go for Sancho? she had asked him. Dick bore it patiently. Some time she would give him his clue, and then—well, Ausha would know what sort of man the sheriff was.

He had his reward sooner than he expected. For, as the girl ended her song that night, and came tripping through the audience, she stopped a instant at Dick's side.

"Sancho will be at my cabin to-night at half-past ten. Kill him if you can Senor Farley. If you can't, take him away. I never want to see his face again, the traitor!" she said.

II

The cabin came into sight, perched on an elevation among the palms. A little stream of water ran beside it. The long ride across the desert was nearly ended. Dick's pony, scenting the water, pricked up his ears and broke into a canter. Dick dismounted in a thorn clump near the cabin and crept cautiously forward to where a candle shone in a window.

He crawled toward an angle of the shack, his revolver in his hand. Suddenly the door was flung open, and a bullet hummed past Dick's ear as the rifle in the doorway rang.

Dick's rush was too quick for the bandit. In an instant the sheriff had disarmed him. Sancho looked up into Dick's revolver.

His hands went up automatically. He scowled at his captor.

"Keep them up and walk through that doorway," said Dick. "If you let them down I'll drill five holes through you."

Sancho moved, cursing, toward the door. Dick followed him. Suddenly he felt Lina's arms tighten upon his neck from behind. At the same instant Sancho turned and dashed the weapon from his hand. As Dick strug-

about his body, pinioning him. The outlaw rolled him to the floor and secured his legs with the end of the coil.

Sancho picked the sheriff up in his arms and carried him to the edge of the stream. He left him there, went away, and returned shortly with a mallet and some long iron pegs. Very deliberately he hammered them fast into the sun-baked earth. Then he fastened Dick's arms and legs to the pegs.

"Good-by till to-morrow," said Sancho mockingly, gazing into Dick's upturned face.

III.

He came back when the first streaks of red were in the sky.

"It will be warmer soon," he said, and ripped the shirt from the sheriff's back. He stooped beside the stream and, dipping up a hatful of water, poured it over Dick's chest. Dick shivered; the water was icy cold.

"Warmer soon," said Sancho, and went away. The sun appeared. Slowly it climbed above the horizon. Dick began to grow thirsty. The sweat streamed down his face and bare chest. About ten Sancho reappeared.

"Warmer?" he jeered, and held his water-bottle to Dick's lips. He withdrew it the next moment and emptied it over his chest. "The desert's warmer than Ausha," he said, and kicked him savagely.

Dick groaned involuntarily. Blisters were forming where the icy water had wetted him. Beneath him he saw the

Suddenly the Door Was Flung Open.

cool waters of the stream. He writhed in his bonds as he tried to reach it. He opened his parched and crackling lips toward it.

Once, awakening from a stupor, he saw Lina running toward him with a pitcher of water. Then Sancho sprang up from somewhere in the shade and struck it from her hand.

"It is my fault, Sancho. I did not mean his death. Set him free," begged the girl.

With a curse Sancho drove her back into the shack. And the sun climbed. Dick was no longer able to struggle; he was hardly conscious of his body, and it felt as if this tormented covering of his soul were something exterior to him.

When he opened his eyes again he saw Sancho with Lina beside the horses. The girl was pleading with the outlaw.

"Release him, and I go with thee, Sancho," he heard Lina say.

The outlaw looked at her—then nodded.

"I shall give him water and set him free," said Lina, and went down by the water side with her pitcher, while Sancho strolled meditatively toward Dick.

"Warm?" he queried, tauntingly, gloating over his victim. Then, seeing that Dick was beyond his malice, he raised his revolver slowly.

Lina, coming up from the stream, saw him aim it at Dick's head. With a scream she flew at him.

Sancho laughed, and, with his free hand, held hers down. And Dick saw the deadly revolver muzzle begin to cover his head again.

Sancho waited. He was in no hurry, and he wanted his enemy to taste death in all its fulness. But the girl was becoming a nuisance. He flung her from him, and, as she fell flat in the sand he aimed again.

At that moment Dick's attention was directed toward a singular gleam of light among the sandhills. There was nothing strange about that. The sun might be playing upon a stone. But, again, the light looked somehow like the glint of a rifle barrel.

Dick saw the outlaw's finger close on the trigger, saw Lina raise herself and stretch out her clasped hands toward Sancho in moaning appeal. Then the sharp crack of a rifle sounded among the rocks. The trigger finger stiffened. But Sancho's bullet plowed through the sand a yard from Dick's head, and Sancho stiffened, toppled, and pitched forward.

With a cry Lina flung herself upon her lover's body. And that was the last that Dick knew, until he awoke to find himself propped up in Doris' arms, with the taste of cool water in his throat, and the walls of the hut about him.

"Dick forgive me, forgive me!" she was saying. "I knew that you had come here, and I was afraid for you, and I followed you to tell you that I love you."

About the House

DOMESTIC SCIENCE AT HOME

Sixteenth Lesson. Rolls.

Rolls and tea biscuits make a delightful addition to the daily bill of fare. The regular bread dough may be used in making them.

Parker House Rolls

Use the recipe for white bread, the sponge method. When the bread is ready for the pan, roll on a slightly floured pastry board one-quarter inch thick. Cut with a four-inch cookie cutter, brush them with melted butter, then fold over in pocketbook style, pressing firmly. Set on a well-greased pan two inches apart. Set to rise for thirty minutes. Then brush with egg and milk wash. Bake for eighteen minutes in a hot oven. Quickly brush the tops of the rolls upon their arrival from the oven with melted butter.

Tea Biscuits

Prepare the dough as for the Parker House rolls. Roll it one-quarter inch thick, then brush with melted butter. Fold over the dough and beat with a rolling pin for three minutes. Cut with two-inch cookie cutter. Set in warm place to rise for eighteen minutes. Then brush with egg wash. Sprinkle with granulated sugar and bake in a hot oven for fifteen minutes.

Cinnamon Cake

Use the recipe calling for straight dough method in the bread recipes. When the dough is ready for the pans, roll it three-quarters of an inch thick. Cut the size of the pan. Place in a well-greased pan and set to rise for thirty minutes. Brush the top with egg wash and cover one-quarter of an inch deep with one-half cupful of brown sugar, one-half cupful of flour, two tablespoonfuls of cinnamon, five tablespoonfuls of lard. Mix the dry ingredients well, then rub in the lard until crumbly. Place on the dough in a moderate oven and bake for twenty minutes.

Cinnamon Buns

Use the straight dough mixture. When the dough is ready for the pans and roll it on a slightly floured pastry board one-quarter of an inch thick. Then spread it with brown sugar, cinnamon and currants and one ounce of butter to every pound of dough. Roll like jelly roll, but in slices one and one-half inches thick. Place so that the buns barely touch each other. Set to rise as directed for bread for forty minutes. Bake in a moderate oven for twenty-five minutes. Remove from oven and glaze with a syrup made of one cupful of molasses, one-half cupful of brown sugar, one tablespoonful of vinegar, one tablespoonful of butter. Place in a saucepan and boil to 220 degrees Fahrenheit, using a candy thermometer.

The yolks of two eggs may be added to these doughs when starting if a richer quality is desired.

Old Yorkshire Scones

Cook a sufficient number of potatoes to measure one cupful when mashed, and while hot add two tablespoonfuls of butter, two tablespoonfuls of sugar, two tablespoonfuls of salt, one cupful of scalded milk. Beat well to mix. Let the mixture cool to eighty degrees Fahrenheit, then crumble in one yeast cake and a sufficient quantity of flour to make a stiff dough, about three and a half cups. Turn on a pastry board and knead well for twenty minutes. Now break off pieces weighing one and a half ounces. Mould into balls. Cover a tray with a cloth, lay the molded balls on the cloth and allow them to rise for ten minutes. Now flatten them out with the palm of the hand. Cover and let rise again for thirty minutes. Lift with a spatula or cake turner and put them one inch apart upon the unturned bottom of a baking pan. Use a little sifted flour to cover the top of the scones. Bake in a moderate oven for fifteen minutes.

Do not grease the upturned surface of the baking pan, but cover it with a slight coating of sifted flour.

Egg Glaze for Buns

Use one egg and four tablespoonfuls of syrup. Beat well to thoroughly mix, then apply to the rolls with a brush.

The housewife will find that, if she buys two medium-sized paint brushes of fair quality, she will save materially in greasing pans and in applying glaze, giving the food a better appearance. Treat the new brushes to a soda bath in scalding water. Wash well, then rinse in plenty of cold water. Now dry, and they are ready for use. Always wash the brushes after using.

MUSIC IN THE HOME

Music a Necessity in Wartime.

In time of war everyone expects to sacrifice a certain amount of luxury. By a simple process of taxation such sacrifices are automatically systematized for the entire community. But the question arises: What is a luxury, what a necessity?

It has been proposed that musical instruments should be classed as luxuries. In other words, music is to be classed with liquor and tobacco as one of those utterly useless frivolities that every serious and patriotic citizen should be glad to give up.

What an anomaly! Music, always a necessity, becomes in time of war absolutely indispensable to a nation. When the nervous system of every individual is working under constant strain, the calming, sustaining influence of music should be given every opportunity to make its presence felt. When patriotic emotions demand expression and encouragement, it is music that will supply it. When thousands of people have to be brought together to one common purpose, music is the only universal language, the only oratory that reaches every heart. We want "O Canada," "The Maple Leaf" and the National Anthem to be sung in every home, in every public place. Yet some so-called economists limit the possibilities of music by placing an embargo on the instruments that should lead us in singing.

The musical sense is one of the highest and noblest possessed by man. It is also one of the most fundamental reaching down to the earliest stages of civilization and the lowest orders of intelligence. The savage goes to war with the beat of the tom-tom in his ears, and the greatest religious and political movements have equally owed their impulse to strains of music.

Time was when music, no matter how universal in its appeal, could be heard at its best only by the rich, but the last ten years have changed all this. The tremendous advance in the manufacture of all kinds of musical instruments, both of the old kind to be played by hand and of those that require only an egg and four tablespoonfuls of syrup. Beat well to thoroughly mix, then apply to the rolls with a brush.

The housewife will find that, if she buys two medium-sized paint brushes of fair quality, she will save materially in greasing pans and in applying glaze, giving the food a better appearance. Treat the new brushes to a soda bath in scalding water. Wash well, then rinse in plenty of cold water. Now dry, and they are ready for use. Always wash the brushes after using.

Worth Protecting

A good article is worthy of a good package. A rich, strong, delicious tea like Red Rose is worth putting into a sealed package to keep it fresh and good.

A cheap, common tea is hardly worth taking care of and is usually sold in bulk.

Red Rose is always sold in the sealed package which keeps it good.

639

Here in Canada where we have a composite of classes, races and traditions, to be welded into a nation and into an army, we have only one language that all can understand, one means of expression that is common to all. Music to create and foster national spirit and consciousness, music to stimulate recruiting, music to brace and inspire those who march to war and rush to battle, and, finally, music to sustain those who have to remain behind and wait—our need is for music, and music, and still more music.

Let us do nothing to discourage the one most powerful influence in the creation of a real and lasting nationalism.

Potatoes add succulence to the dairy ration. Where corn silage is not available and there are plenty of small potatoes, a peck a day will give a marked increase in milk flow. Introduce into the ration gradually and run through a root cutter to avoid the possibility of choking the animal.

A Few Don't For Hunters.

Don't pass a loaded gun for inspection to a brother hunter, or anyone for that matter.

Don't leave a loaded gun around the house or camp or anywhere else.

Don't—whether it is loaded or not—lay hold of a gun by the muzzle and pull it toward you, from a canoe or a wagon.

Don't climb over a fence with a loaded gun in your hands.

Don't think you can do accurate shooting with a dirty gun.

Don't "walk up" on any wounded game without having a cartridge in the chamber of your rifle, ready for any surprise.

Don't by any chance set the woods afire.

Keep seed corn away from rats and mice.

Geo. Wright & Co., Props.

If You Are Not Already Acquainted

let me introduce you to the Walker House (The House of Plenty), wherein home comfort is made the paramount factor. It is the one hotel where the management lead every effort to make its patrons feel it is "Just like home."

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

For that which befalleth man befalleth also the beast.

THE CUP THAT CHEERS.

Tea and coffee are generally drunk for the pleasure and the sense of well-being they give; yet both these beverages are mostly stimulants, with practically no food value.

When a tired woman prefers to find cup after cup of strong tea she is cheered, perhaps exhilarated—yes, times actually inebriated; and this to the jeopardy of nerves and muscles. So that her constitution must sooner or later break down, if the cup-tipping habit is persisted in. Then is there a case of hysteria for the doctor, possibly even a case of "incompatibility of temper" that has to be dealt with in the domestic relations court. In like manner, when a man under stress of business or who is going "the pace that kills" drinks daily anywhere up to a dozen cups of strong coffee in order to keep up under the unnatural strain, he is, as sure as fate and the tides, going to pay the penalty for his intoxication—for that is what it all amounts to. There are plenty of other intoxicants in nature besides alcohol.

The natural forces of the human body are able to do normally just so much work; and their ability to do this work is directly in proportion to the energy derived from the food supply taken into the body. A machine is kept going by the fuel in the engine; it may be made to go faster by means of bellows. Coal is the fuel; the bellows stimulate the flame. In the man machine, food (meat, vegetables, cereals) are the fuel; tea, coffee, alcohol and like stimulants are the bellows—they are not the fuel. No amount of such stimulants adds to the living tissues (the nerves, muscles, organs of the body); they merely goad the nerves, the muscles and the organs to undue, unnatural effort, however tired and unwilling those tissues may be. When the stimulant is stopped, or, if after a time in spite of the stimulant, the exhausted tissues refuse to do their work, then the weakened body rebels and refuses to work again until it has been fully restored—recreated—by rest, sleep, change, fresh air, abundance of nutritious food and by hygienic living in general. If these salutary means are not forthcoming, disease perhaps fatal, is inevitable.

QUESTIONS AND ANSWERS.

Feels Dizzy.

I am 51 years of age and am troubled with dizziness. In the morning on rising I have to hold on to something to steady myself; and on lying down I seem to lose control for a moment or so. What can be the cause of my trouble.

Answer—With such a symptom at your age one must consider hardening of the arteries, of which dizziness is a very frequent symptom. You should be under the care of a good family doctor.

Rabic Horse Bites Cow.

Sometime ago our cow was bitten on the neck and forelog by a horse having hydrophobia. But where the cow was bitten there was no wound made in the flesh. We have waited 25 days before using her milk; do you think it is safe for us to use the milk now? Our veterinary told us to wait 21 days.

Answer—By all means use the milk after 25 days. You were wise to take precautions. And when the skin of animal or man has not been perforated by the bite of a rabic animal, the danger of hydrophobia is slight and certainly after 21 days negligible.

THE STORAGE OF POTATOES

By Louis D. Sweet.

It is of great importance that all the potatoes raised this year should be stored under proper conditions. Even when every precaution is taken the wastage of potatoes during the winter is considerable; under bad conditions of storage it is very great indeed.

In order that the best methods may be adopted by the small growers, those who have not had the experience in the storage of potatoes should know the chief causes of the wastage. These causes are:

1. Sweating, heating and consequent rot: often due to insufficient ventilation.

2. Rotting: due to potatoes getting wet at the time of putting them in storage.

3. Injury from frost.

4. Decay: owing to disease in the tubers at the time of storage.

5. Sprouting of tubers in the spring.

It is not possible to prevent altogether losses from these causes, but by using the best methods of storage, it is possible to reduce them very materially.

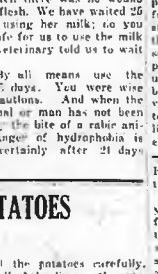
This may be done by taking care to guard against losses from each of these causes:

1. Sweating and heating occur if the freshly dug potatoes are piled in too large piles, so that the air cannot circulate between the tubers. The risk of loss from this cause is greatest in the fall, immediately after the tubers have been dug, and it is, therefore, important that potatoes when dug should not be put in unnecessarily large piles, nor kept in an ill-ventilated room.

2. Rotting from getting the potatoes wet. If the potatoes at the digging time are allowed to get wet and to go into storage in that condition, rotting is sure to occur. Be careful to have your potatoes dry before storing.

3. Injury from frost. Potatoes are easily damaged by frost. If they become frozen, their market value is destroyed. Therefore, take every precaution to protect the tubers from frost before and after digging.

4. Disease. There are several diseases of the potato which destroy the tuber, and if diseased tubers are mixed with the sound ones, the disease spreads rapidly; therefore, it is necessary to sort the potatoes carefully, eliminating all of the disease, the cuts, culls, and dirt before placing them into permanent storage for the winter. All of the cuts, culls, misshapen and diseased tubers should be fed to the poultry and live stock, but should be steamed or boiled before being fed, as in this way you increase the food value, and also destroy the germs of the disease, so that it will not get into the manure and thence into the land.



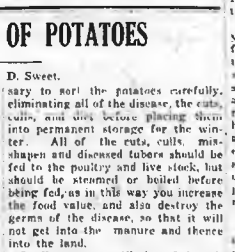
5. By proper ventilation of the cellar or storage room, and by holding the temperature as near 35 degrees F. as possible, you can keep the potatoes from sprouting.

Selection of seed. Seed for next year's planting should be selected from hills that produce all nice, true to type potatoes. These should be selected at the digging time, and stored separately in crates or boxes, and by storing them in a well-lighted room where the temperature can be held at from 34 to 40 degrees, with a little ventilation and this seed planted next spring, the grower will make a start toward improving the quality of his potatoes, instead of as in the past, simply planting the culls or runouts.

Keep a quantity of browned flour on hand for making gravy and you will be surprised at the time saved.

As far as known, only three conditions are necessary to produce spontaneous combustion in hay-mows or stacks. These are the presence of moisture in the hay, the presence of a great enough bulk of the hay to retain heat, and sufficient ventilation to supply the necessary oxygen.

FREE TO GIRLS



Lovely Big Canadian Doll and Splendid Big Doll Carriage

This Doll is made in Canada, is 15 inches high and is fully jointed.

The Doll Carriage has steel frame and wheels and leatherette seat, back and hood. It is 24 inches high, just the right size for the Big Doll.

If you will sell 30 packages of our lovely embossed Xmas and other Post Cards at 10c. a package we will send you, with all charges prepaid, our lovely 15-inch doll and we will also send you the splendid 24 in. doll carriage. If you will show your doll to your friends and get just a few of them to sell our Xmas Cards and card prizes also.

Send us your name and address and we will send you the cards to sell. When sold you send us the money and we send you your prize.

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

L.F.:—1. Will frozen corn make good silage? 2. When is manure most valuable, when fresh or after standing some time? 3. What is a remedy for the zebra caterpillar? 4. Also for wire worms:

Answer:—1. Frozen corn, if handled sufficiently early will make a fair quality silage. When the corn is frozen it is best to cut it at once, or as soon as possible, before the leaves are entirely dried out. Corn cut under such conditions should be put together in large bunches or shocks, so that as little drying out as possible will take place before it is cut up and placed in the silo. If handled in the above way, very little loss will be occasioned. 2. From the standpoint of obtaining the most organic matter, manure is most valuable when it is fresh. From the standpoint of obtaining the most available plant-food, it is most valuable after it has stood for some time, provided that the manure is protected from rain and snow and sufficiently packed so that it will not burn or fire-fang. 3. I do not find any insect catalogued under the name of "zebra caterpillar." I assume from your description that you refer to the army worm. This worm collects in large numbers in meadows and pastures for about two weeks before it begins to migrate. The insects hide during the day, but begin feeding about sundown. There are several methods of combatting the ravages of this insect. One is by sowing broadcast a mixture of bran-mash, mixing about 25 lbs. of bran with 1 lb. of Paris green, and a pint of sorghum or molasses, with enough water to make sort of a loose paste. The insects eat this poisonous mash readily. If you can discover where the insects are working in the meadow or pasture, have the section of the field rolled or dragged with a log drag. This will kill a great number. In case the attack is under way and the army of insects is moving toward a corn or wheat field, have a furrow plowed with the vertical side of the furrow toward the crop. Spread dry straw along this furrow and sprinkle the straw with kerosene. As the insects fall in, light the straw and repeat the burning out of the furrow until the attacking host of insects has been halted. 4. Wire worms are very hard to control. A rotation system of crop rotation should be established so that the field that is infested with wire worms may be plowed up and worked, at least once in three or four years. This will upset the dwelling place of the wire worms and should clear the soil of the pests. The addition of fertilizers has been found to control to some extent the attacks of wire worms.

L.R.:—1. I have a five-acre field in alfalfa but it looks very thin. It was sown last fall. How can I improve it? 2. Can you suggest a remedy for ox-eye daisy and wild mustard?

Answer:—1. It is late to do anything on your alfalfa field this fall other than covering it with a light dressing of strawy manure at the rate of possibly four or five loads to the acre. In the spring I would advise you to top-dress it with fertilizer at the rate of 200 to 300 lbs. per acre, the fertilizer analyzing at least 2 per cent. ammonia, and 10 to 12 per cent. available phosphoric acid. After you have broadcasted this fertilizer over the field, follow it with the harrow, harrowing with the rows of alfalfa, if the alfalfa has been drilled in. The teeth of the harrow should be set back so as not to drag the young alfalfa plants out of the ground. The cultivation will do them good as will the addition of the available plant-food. 2. I assume that the ox-eye daisies are growing in your alfalfa field. If such is the case, frequent cutting of the alfalfa should prevent much seed dropping. It would be well also when fertilizing the field in the spring to scatter some fresh alfalfa seed over the areas where the alfalfa has not grown, or where the daisies have killed it out. If wild mustard appears in the grain field, the field should be thoroughly disked immediately after the grain is cut, so that the wild mustard seed will have an opportunity to sprout and the young plants can be killed by the plowing that follows. If the grain field is infested with mustard, it should be sprayed before the plants come to the blossoming stage, using the following solution: Add 75 to 100 lbs. of sulphate of iron to 52 gallons of water. When this is sprayed over the field it will turn the grain a slightly dark color and will kill to a very large extent the mustard plants growing. The grain will quickly recover, while the mustard will die out. If the mustard is among the alfalfa crop, I am afraid the spraying with iron sulphate will injure the alfalfa, so that all that can be done would be to have the mustard pulled by hand, under such conditions.

The Dairy

Age to Breed Heifers.

I have had a number of years of experience in raising and developing dairy heifers, and have found it best not to have them freshen before they are two and a half years of age, says a successful farmer. I have had heifers freshen at from one and a half to three years old, but those calving while young have been hindered considerably in their growth and development and have not made as large cows as those freshening at an older age.

I have also seen heifers which dropped their first calf at a year and a half of age mature very satisfactorily and make splendid cows, but they took one to two years longer in maturing. These cases of course are rare. In freshening at two and a half to three years of age the heifer is more matured, and therefore in condition to milk much better than if younger.

In the City of Kerman, Persia, there are 1,000 rug and carpet looms.

Gillette Safety Razor

He'll Appreciate Your Good Judgment As Well As Your Good Will

if for Christmas, 1917, you send him a Gillette Safety Razor! That's the gift that is valued Overseas for *itself* as well as for the sake of the sender. Few articles of personal equipment are so welcome, for the Gillette is known up and down the Allied lines, by Canadian, Briton and Anzac, Frenchman, Italian and American, as the one sure passport to a clean and enjoyable shave.

Even if he has already had one, the man in whom your hopes centre will be glad to get another Gillette Safety Razor. For under active service conditions, equipment so sought after as the Gillette strays easily and often, and he may now be trying to worry along again without one. So whatever else your box may contain, don't forget a GILLETTE SAFETY RAZOR—and a good supply of blades.

If you prefer, we will take your order, through your dealer or direct, and deliver the razor of your choice from our nearest depot Overseas. Ask your dealer about this when he shows you his Gillette assortment.

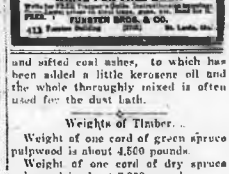
Standard Sets and "Bulldogs" cost $5.00—Pocket Editions $5.00 to $6.00—Combination Sets $6.50 up—at Drug, Jewelry and Hardware Stores.

Mails are congested—shipments slow. Send his Gillette early!

GILLETTE SAFETY RAZOR CO. OF CANADA, LIMITED,
Office and Factory: Gillette Building, Montreal 274

Poultry

Sending chickens to market which have not been properly fattened is a wasteful practice. The weight of healthy, well-grown chickens can be increased from 25 to 50 per cent. in two weeks by proper feeding. Three hundred and fifty to 400 pounds of mash, moistened with skim-milk or butter-milk, and properly fed to good fowls will produce 100 pounds of poultry meat in from 12 to 14 days. Proper feeding of the chickens before marketing improves the quality of the flesh. "Crate-fed" and "milk-fed" are synonomous with "high quality."



Cottonseed meal is very rarely used in the rations fed hens. Like linseed meal it is a concentrated protein food and when fed in the ration is liable to give the hens too much vegetable fat and protein for their own good. A hen requires considerable protein in her diet to enable her to lay well, but under natural conditions she obtains this protein in the animal form from the worms and grubs she picks up, therefore it is advisable to make up this lack of protein in the winter ration by the use of beef scraps, green bone or milk.

Fowls will keep themselves free from vermin during the winter months if given a convenient place to dust. A box thirty inches square and twelve inches deep may be built in one corner of the pen, or such a box may be made with legs so as to raise it sixteen inches off the floor. Almost any fine dry powder will make good dusting material. The particles should be fine enough so that they will choke up the breathing pores of the parasites which live on the fowls' body. Equal parts of loam, sand and sifted coal ashes, to which has been added a little kerosene oil and the whole thoroughly mixed is often used for the dust bath.

Weights of Timber.

Weight of one cord of green spruce pulpwood is about 4,500 pounds.

Weight of one cord of dry spruce pulpwood is about 3,000 pounds.

Weight of one cord of green white-birch is about 6,000 pounds.

Weight of one cord of poplar pulpwood is about 3,200 pounds.

Weight of 1,000 feet of old growth spruce logs (according to Maine or Holland rule scale) is about 6,000 pounds.

The weight of green lumber may be reduced from 30 to 50 per cent. or more in seasoning, while the strength of small clear pieces may increase in seasoning up to double the strength when green.

Clothespins will not freeze to the line if they are first boiled in strong salt and water and then dried.

About four-fifths of the Italian army is drawn from the agricultural classes, and as a result requests for leave of absence to allow of the tending of crops are numerous, but only a small percentage can be granted.

The Paisley Advocate

PAISLEY, NOV. 14th, 1917

UNION CANDIDATE IN SOUTH BRUCE

A. E. McNab will Oppose Truax

The convention held at Walkerton on Monday afternoon by supporters of Union Government was attended by a large number of delegates—between 150 and 200—from both the old parties. An organization was formed with Mr A D McKenzie of Lucknow as President and Mr W J Bell of Chesley as Vice-President. A vice-president was also appointed for each municipality. The names of a number of prominent men of both parties were put in nomination as candidate for the riding in the coming election. Of these only two were balloted upon—nearly J E Case of Elderslie and Alex B McNab of Walkerton—both Liberals—the latter receiving a majority of the votes upon the first ballot. Mr McNab is the junior partner in the law firm of Robertson and McNab. He has been prominent in municipal affairs of the town and county, having served several years as reeve of Walkerton, and in 1916 was warden of the County. He is also President of Bruce County Patriotic Fund, and Secretary of the Bruce County Patriotic Fund. He is a strong win-the-war man. He was born at Chepstow 41 years ago, is a Roman Catholic in religion, and a brother-in-law of Senator Donnelly. Mr McNab will make a strong opponent to Mr R F Truax ex-M. P., who will run again as a straight Laurier candidate. Mr Truax voted against extension of Parliament and in favour of the Laurier referendum. He supported the conscription bill on its second reading, but abstained himself from the House on the third reading of the bill.

EXEMPTION TRIBUNAL

There was some delay in assigning the second member of the Exemption Tribunal at Paisley, but finally Mr M A Halliday of Chesley was decorated and has been acting with Mr Ballachey since Saturday. Mr Alex Galbraith is the military representative. The following applications have been disposed of up to Tuesday evening:

DISALLOWED

John Morrar, Paisley, railway section hand.
Neilson Stark, Paisley, miller.

ALLOWED

Wm W Pearce, Paisley, laborer.
Arthur J Brown, Paisley, farmer.
John C Carrie, Glamis, farmer's son.
Chas Fitzimmons, Glamis farmer's son.
Geo McKay, " "
Thos Thompson " "
Hector McGillivray, 12th Bruce farmer's son.
Johnston Bannerman, Elderslie "
Wilmer H Bellbeck, Brant, farmer's son
Hector McLean, Glamis, farmer.
John McLeod, Glamis, farmer.
Alexander Kirktown, Glamis, farmer.
Geo O Robertson, Lorne P O, farmer.
Henry Needham, Lorne P O, farmer
Garnet S Ritchie, 20th Green'k, farmer.
Stanley McCaw, Elderslie, farmer.
Jas Ewing, Elora Road north, farmer.
Andrew F Johnston, Greenock, farmer.

ADJOURNED

David G Wilson, Greenock.

We understand that all exemptions are conditional, and those not granted exemption have the privilege of appeal.

You know, of course, that every industry of any importance has a paper of its own, one to which it gives its united support by way of advertising and subscriptions. Those interested do this that the paper may live and continue to be useful to them by aggressively advocating their interests. You have a paper that for over twenty-six years has been looking after the interests of the farmer. Have you given it your support? If not, see that you subscribe for The Weekly Sun, Toronto, the farmers' business paper, from the present time to 1st January, 1919. It will cost you only one dollar, but you will find the dollar well and profitably spent.

Enumerators Appointed

Returning Officer John Henderson, of Walkerton, was in town on Tuesday and appointed Messrs C Briggs and H McKercher as enumerators for Paisley. In the Dominion election coming on the municipal voters' lists of 1916 will be used and the enumerators will prepare and write out the lists of women who are enfranchised by the new election act. These include every woman over 21 years who is a British subject and is the wife, widow, mother, sister or daughter of any person, male or female, living or dead, who is serving or has served outside of Canada in any of the military forces, or within or without Canada in any of the naval forces of Canada or Great Britain in the present war.

Returned Soldier

Pte. Herb Clark, of Vancouver, B. C., who has been in hospital for several months, and is now on the way to his western home, spent a few days last week in town. He is a former Paisley boy, son of Mrs Clark now of Brampton, and was the guest of his sisters, Mrs. D. McArthur and Mrs Geo. Fullerton, here. Pte Clark has been two years in khaki, having enlisted with the 47th Battalion, of Vancouver. He was six months in the trenches, and at the Somme was put out by German gas. Following that he took trench fever and pneumonia, and it is over a year since he was put in hospital. Herb tells The Advocate that the overseas soldiers are anxious to see re-inforcements flowing from Canada, as every man is needed to show the Kaiser what he is up against in his great game of trying to bluff the Allies into a peace agreement. The air raids on England, he says, are worse than a newspaper accounts show. The soldiers at the front would like to see reprisals made upon German towns by the air forces, believing that the civilian population of Germany can only be awakened to the truth of the war by attacks upon their homes. As yet the German people know nothing of what it means to have war made upon their hearthstones as it has been in France and Belgium. Canada looks mighty good to this returned soldier. He says he would not care to try farming in the parts of Europe where the land is besprinkled with shells, as many unexploded shells-bangs and other such munitions are lying in the ground, liable to blow up the first plow-point or anything else solid that jars them.

LOCAL NAMES IN THE CASUALTY LIST

Killed In Action

The sad news came to Mr A Pearce on Sunday evening that his son, Corp Emerson Pearce, had been killed in action on Oct 26th. The deceased soldier enlisted as a bandsman with the 99th Battalion in October, 1915, and went overseas in June 1916. In Eng and he reverted from the position of band sergeant and went to France as a private infantryman in Dec., 1916, thereafter winning his two stripes, since then he was in the thick of the fiercest campaign carried on by the Canadian divisions. At Vimy Ridge he had his helmet damaged by German shot, and in another advance he was buried by a shell explosion. On this occasion he suffered quite a shock, but did not apply for hospital leave, merely rested in the rear for a few days and then resumed duty. Emerson was a splendid type of young man, stalwart in physique, morally strong and clean, and was respected by everyone, he had been employed in the G T R station here as telegraph operator and baggageman prior to enlisting. He was a member of the Methodist church and an active worker in the Epworth League. Other local organizations with which he was identified were the rifle club and the town band, also one society the Canadian Order of Foresters. In maintain his membership in such a list of community interests betokens that genuine good citizenship which eventually prompted him to offer himself for service as a defender of the nation. The bereaved family will have the heart-felt sympathy of all in the great loss they have sustained by the death of their heroic son and brother.

—Lieut. Stanley Thomson, son of Councillor Jas. Thomson of Elderslie, has been wounded.

Gnr Geo McLean, son of Mr and Mrs Angus McLean, of Toronto, is another ex-Paisley boy who has made the great sacrifice.

Pte Chas. Edgar Orford, a former Greenock boy, was killed in action on Oct 26th. He was a son of Mr and Mrs Isaac B Orford, now of Owen Sound, and was 25 years of age.

Thomas Bryce, eldest son of Mr and Mrs Arch Bryce of Dunblane, is wounded. We understand he was with the artillery, having joined in the west. He lived at Yellow Grass, Sask, and is a married man with a family.

Gunner W E Mooney was admitted to No 44 Clearing Casualty Station on Oct 29 with a gunshot wound in his right thigh. He is the only son of Mrs S Mooney, formerly of Greenock and Paisley, now of 257 Brunswick Ave, Toronto.

Corp W A Anstead, son of Mr and Mrs W C Anstead is reported dangerously ill from appendicitis. He has been in England for some time, but was with the transport at the front. He enlisted with the 166th.

Driver Wilfred Bryce, of Owen Sound, who died of wounds on Oct 23rd, was a son of Mr and Mrs John Bryce, formerly of Paisley, and was born here. He was 32 years of age, was a graduate of the Collegiate Institute and served for some time on the Royal Bank staff in Owen Sound. The family left here 14 years ago.

Pte Norval Kyle, son of Mrs F Purdy, was wounded, on Oct 29th by a gunshot wound in the chest. Mrs Purdy received a letter on Tuesday from Norval written in the base hospital by himself on the day he was wounded. He states that a rifle bullet struck him in the breast, and penetrated his body, coming out through the back. He writes very assuringly, however, adding "Don't worry about me."

Anglo-Saxons Get Even

—A farming community not ten miles from Paisley has given a practical demonstration of reprisal upon Hun methods. A German in the section had failed to exhibit any but pro-German sympathies. Last winter he refused to allow horses to stand in his stables while the owners were in attendance at a Red Cross box social. He cultivated his good Canadian land this year as heretofore, and was rewarded with as good crops as his loyal British neighbors, but when it came threshing time he found the latter all unwilling to help him thresh, and machine owners would not accept his proffered gold to come to his barn. Unless he takes to using a flail, or puts his cattle on the job as in old Biblical times, this unneighborly man will have ample time before spring to ponder over things and decide whether he should do that which is best in the sight of the Kaiser or become a real citizen of the free country in which he is living.

Reid—George

A quiet but pretty wedding was solemnized at the home of Mr and Mrs T. H. George, Albert Street, Paisley, at 5 p. m. on November 7th, when their youngest daughter Jetta Lavenia was united in marriage to Mr Roy Reid of Dresden. To the strains of the wedding march played by Miss Gertie Dell of Port Elgin, cousin of the bride, the bride, leaning on the arm of her father, entered the room where the groom was in waiting, and they took their place under a white pannelled arch, prettily trimmed with myrtle and ferns. Rev Mr Creighton, pastor of the Methodist church, united them in the bonds of holy matrimony. The bride looked beautiful attired in a white silk marquisette wedding gown trimmed with pearls, over silk and shadow lace, and wearing a bridal veil caught up with lily of the valley and carrying a shower bouquet of white carnations and lily of the valley. Her only ornament was a cameo pendant draped with pearls, the gift of the groom. The pleated gown and pearl brooch also the gift of the groom. Only a few immediate relatives and friends were present. After the usual congratulations and signing of the register, the company repaired to the dining-room which was prettily festooned and decorated with ferns and white chrysanthemums, and where a sumptuous dinner was served. The many valuable and useful presents received bespoke for them louder than words of the love and esteem in which the young couple are held. Among them was a substantial cheque from the bride's father and a quarter cut oak cabinet sewing machine from the bride's sisters and brothers in the west. On Monday morning the happy couple left for their new home on the groom's farm in Chatham township near Dresden where their many friends wish for them all the happiness and prosperity that wedded life can afford.

THE TONIC THAT BRINGS HEALTH

"Fruit-a-tives" Builds Up The Whole System

Those who take "Fruit-a-tives" for the first time, are often astonished at the way *it builds them up and makes them feel better all over*. They may be taking "Fruit-a-tives" for some specific disease, as Constipation, Indigestion, Chronic Headaches or Neuralgia, Kidney or Bladder Trouble, Rheumatism or Pain in the Back. And they find when "Fruit-a-tives" has cured the disease, that they feel better and stronger in every way. This is due to the *wonderful tonic properties* of these famous tablets, made from fruit juices.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Lost Sight or "The Light That Failed"

Kipling's pathetic tale of the artist who lost his sight, teaches a moral. The eyes are the bread winners. Take care of them. Have them examined. Know that they are right. We are eye experts. Satisfaction guaranteed

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

The Military Service Act, 1917

DON'T DELAY!

Do It TODAY

THE MILITARY SERVICE ACT is passed; the Proclamation issued October 13th. It is now the bounden duty of every man in Class One to report for service or claim exemption. This includes all bachelors and widowers without children (not otherwise excepted) who were 20 years old on the 13th October, 1917, and whose 34th birthday did not occur before January 1st, 1917.

What To Do

Go to your Post Office and ask for the form for reporting for service or for claiming exemption. The form contains clear instructions for filling in. Do this not later than NOVEMBER 10th.

Beware of the Last Minute Rush

With so many thousands of reports and claims to be dealt with, the rush of Class One Men will grow heavier day by day. You will waste less of your time and serve your own best interests if you avoid the inevitable rush on the last days.

The law is being enforced with the Government and the People firmly behind it. Obey the law. Do it today.

321

Issued by The Military Service Council

Suit Over Stolen Booze

A shipment of whiskey consigned by the United Liquor Co. of Detroit to Joseph Foster of Bruce Township was seized by Inspector White of Walkerton at the Pinkerton station recently, and while being left over night in the depot was swiped by some thirsty soul, who broke in and "lifted" the moisture. As Foster had sent his good money away for the tanglefoot and had actually paid the express charges on it without ever seeing the color of his purchase, he has entered an action in the Division Court at Walkerton against the Canadian Express Co. for $32 for failure to deliver him the exhilarator. The express company on the other hand maintain that they brought the booze as ordered to the Pinkerton station, and that it had been impossible for them to make delivery to the plaintiff because of circumstances over which they had no control and for which they had not been responsible, and further that there was no negligence on their part either in delivery or in the custody of the goods. The case, which was to have been tried at the Division Court here on Friday, was adjourned on request of the defendants to the next sittings of the court in December, when the decision, which promises to be an interesting one, will probably be given. —Herald & Times.

—The purchasing of Victory Loan Bonds by the farmers of Bruce County will be the means, to their best customers, to purchase the products of their farms.

—The sum of $297.49 was raised for the school children's war fund at the school fairs in Bruce County this year, and $7.06 for the overseas Y.M.C.A. fund.

Children Cry FOR FLETCHER'S CASTORIA

One of the most widely circulated war pamphlets in Germany is one in which it is declared that the indemnity to be wrung from the United States is 248,000,000 marks — about eight-seven thousand millions of dollars. We haven't seen Canada's assessment yet, but it would no doubt be great enough to justify saying that while the war is costing the U. S. and Canada a great deal, to lose it would cost more.

Children Cry FOR FLETCHER'S CASTORIA

—The manufacture and sale of oleomargarine is now allowed in Canada, also its importation free of duty, an order-in-council having been passed upon recommendation of the food controller, to come into effect on November first. This is a war time measure only. Strict provisions are made to protect the public and the farmers against fraudulent sale of oleomargarine as butter. Packages containing oleomargarine must be clearly marked as such.

Can You Feed More Live Stock?

If so, you will be interested in conditions under which freight charges will be paid for you on car lots.

The Ontario Department of Agriculture is anxious that the splendid crops harvested this fall should be used to best advantage. In many cases this can be done by feeding a few more head of cattle or sheep for breeding purposes. The Department therefore calls attention to the announcement of the Federal Minister of Agriculture offering to pay freight shipments on car lots from eastern stock yards to country points.

Please note these facts:

Individually or in co-operation with your neighbors you can purchase a car load of heifers or cows, or both combined, and have them shipped from any eastern stock yard to your station without any cost for freight charges. You will be required to make a declaration that the stock is for breeding purposes only.

Any farmer or drover can purchase a car load of cattle for feeding purposes on the Winnipeg market and have them shipped to any country point in Ontario upon payment of only one half the usual freight charges.

Feeding at the Toronto Stock Yards available at reduced rates, and expert assistance is at disposal of farmers.

"Every effort should be made to bring the surplus stock of some sections to the surplus feed of others. All indications point to a steady demand for the meat supplies of this country for some time to come."—Sir William Hearst, Ontario Minister of Agriculture.

The District Representative will assist you in organizing a co-operative car for your district, if desired, or in giving any other information.

N. C. McKAY, District Representative
Ontario Dept. of Agriculture, Walkerton, Ont.

"My Paper!"

When Ambassador Gerard left Berlin, the only correspondent who traveled with him, and the last American Newspaper man to leave Berlin, was Carl Ackerman of the United Press Service.

Ambassador Gerard

Mr. Ackerman's dispatches appear exclusively in The Toronto "Daily Star."

About once a month we "Scoop" every other paper in the Province with the aid of Mr. Ackerman and other United Press correspondents.

The only Canadian Woman Correspondent in the War Zone—Miss Rosamond Boultbee—sends us dispatches exclusively.

Florence Boultbee

In London the veteran War Correspondent, Mr. F. A. McKenzie, assisted by The Star's own Staff, cables the big news of each day.

Thomas Geggie, late Sergt.-Major K.O. S.B., writes regularly upon Imperial and Military matters.

Carl Ackerman.

The big news from the United States comes to us through the Chicago Daily News' special correspondents, as well as their War cable service.

We also carry the cable service of Windermere of the "Montreal Daily Star."

We maintain our own staff in Ottawa, Montreal, Quebec and Winnipeg, and our local News Service is right up to the minute.

Sergt.-Major Geggie

Our special articles are contributed by foremost writers on each subject.

Our regular news service consists of all Canadian Press, American Associated Press and Canadian Associated Press dispatches.

"Windermere."

We also have exclusive rights to the pictures of the London Daily Mirror, Underwoods, Daily Mail, Topical Press Services, as well as Canadian Official War Records, Sports, etc.

F. A. McKenzie.

In brief, The "Toronto Daily Star" is one of the great broad-gauged newspapers of the World. By reading it you will be kept well informed upon every subject that a good citizen and man of the World should know about.

Read The "Toronto Daily Star" each day. You will thoroughly enjoy it, and be glad to acclaim it in all sincerity as "MY PAPER!"

Order it to-day.

The Toronto Daily Star

A NEW PRIVILEGE

Finance Minister Announces that All Victory Bonds may be Registered

The following announcement has been made from Ottawa:—The Finance Minister of Canada has issued a new instruction to accord him with the Victory Bonds, which will be of much benefit and importance to many small investors. He has decided to grant the privilege of the registration of all bonds, that is to say, that bonds of all denominations, including the $50 bond, may be registered as to principal and as to principal and interest.

In previous issues the privilege of registration was more strictly confined to bonds of the larger denomination, such as $1,000 bond or more. Bonds of lower denominations were issued as bearer bonds, with coupons attached, and while carrying equal benefits as to principal and interest, were liable to being lost by the owners. Under the privilege now given by the Finance Minister, the buyer of any bond (whatever the denomination), may have it registered, in which case the interest will be paid by cheque, and the bond if lost may be replaced after proper evidence has been shown.

It is believed that this privilege will be greatly appreciated by many thousands of small investors, who will thus be assured of the absolute safety of their investment even against fire or carelessness or any other accidental cause of loss. This improvement in the plan will involve extra work upon the Department of Finance, but the Minister considers that its benefits will more than offset the labor involved.

Aviator John Bickle, who is training with the Royal Flying Corps, unreeled a rather startling tale of treachery at his camp, while on a visit to friends in town this week. It seems that of five American planes that went up all came crashing down as a result of the snapping of the cables which control the machines. The f aviator met his death from the while the other four were badly b en up. Upon investigation it found that the cables had been se ed by a powerful acid, which bar eaten into them that they snap when pressure was put onto th The deed, it seems, was finally t ed home to three German-Amer mechanics who were assisting at camp, and who were court-martia and later taken out and shot. As dead aviator and the four injured ers were all Americans, it w seem, from John's story, that U Sam has full reason for doing a careful watching in his ranks.—Herald & Times.

The AUTOMOBILE

How to Stop the Squeak in The Car.

"One of the most annoying troubles of an automobile is that constant squeak that cannot be located," says an expert. "It is one of the symptoms of neglect, and it cries out to you every time the car sways or strikes a rough spot or turns a corner or starts or stops or seemingly does anything else. At every move there is a cry of protest, which is all the more maddening because you cannot locate it. If the squeak comes only when you apply the brakes it is evidently in the brake bands, but other squeaks are not so readily located.

"The next likely place is in the springs and spring shackle bolts. The springs are habitually neglected and so run dry. In order to prevent this the leaves should be greased at least once a month. Jack up the frame to take the weight of the car off the springs. Spread the leaves apart, one by one, prying them open with a cold chisel or metal handled screwdriver driven by a medium weight hammer. This will chip off some of the paint, but that is unavoidable. Then spread graphite grease between the leaves by means of a thin knife or a hack saw blade. As you cannot reach all the way to the centre where the clips hold the springs firmly together use cylinder oil mixed with a little flake graphite. If springs are badly rusted they should be removed and the rust filed off—a dirty job and a tedious one. They may be properly greased before replacing.

"There is a special tool on the market which may be used to spread the spring leaves without jacking up the frame. It works as a double wedge and is very satisfactory.

Hood and Mudguards

"If time presses use the following method:—Wipe dirt off springs with waste and kerosene, using plenty of kerosene and guiding it down the sides so that it may run in between the leaves. This it does readily, as it is not repelled by the rust. Wipe off the surplus and then pour some medium bodied cylinder oil over the springs, guiding it down the sides in the same manner. The oil alone would be repelled by the rust, but the kerosene has an affinity for it, thins it and it runs in fairly well. Stand on front spring hangers and dock car or do the same from each running board. This action will help spread the oil and so find the squeak if it is anywhere in the springs.

"Next turn your attention to the hood and mudguards. Raise each side of the hood and see if the strips of rawhide are in place. If they are worn through or missing they must be replaced. A little neatsfoot oil might be rubbed into them as an extra precaution. Close hood and see if metal touches metal at any place. A light touch of graphite grease should be applied here and there and particularly along the hood hinges and where the rod touches dash and radiator. Now shake the car again or try it out on a rough road. If the squeak persists then try the following:—

"Fill an oil gun with cylinder oil and force quantities of it into every place where metal meets metal or wood, such as the whole length of the mudguards, the bottom of the hood, the hood fasteners, where running board and mudguards join, etc. Then crawl under the car and inject oil along the frame where the body touches it. Sometimes the joints of a wooden body open up and squeak. These joints must be located and oiled. Go over every part repeatedly, forcing oil under high pressure into every likely place. It is a dirty job and the car will have to be cleaned after it, but you will probably stop the squeak.

Use Care With Brakes

"A general idea of where the noise is located may sometimes be obtained by jouncing one end of the car at a time. Then confine your attention to the parts where the noise sounds loudest. This is not always a sure guide, as you cannot shake one part of a car without disturbing the rest, but it is worth trying as a guide when starting. Another help will be to notice whether the squeak occurs when the front wheels strike a jounce, such as a water rut, or when the rear wheels strike it. You might then try shaking one corner of the car or the other and by that means have the noise pretty well located.

"The treatment for a squeaky brake band is to place a little grease at the opening and let it be drawn in as the wheel revolves. Some repair men recommend linseed oil for this purpose, as the excess is readily squeezed out and so is not dangerous. As intimated, there is danger in putting much lubricating material on the brake bands, as they are intended to hold instead of slip. Apply a little at a time, trying the brakes meanwhile so that the danger point is not passed."

Food Control Corner

Beef and bacon are needed overseas in increasing quantities. They are foods especially suited to the requirements of the men who are fighting and those doing heavy physical labor. The scarcity of fodder and the greater call for meat have compelled the Allies since the beginning of the war to kill more than 32,000,000 head of their stock animals. Thus the source of their meat is decreasing. At the same time the needs of the soldiers and war workers have increased the necessary meat consumption.

Imports of beef and bacon into Great Britain from Sweden, Denmark and Holland have been reduced to a very small amount, whereas all three countries formerly supplied large quantities. The United Kingdom is thrown more than ever upon the North American continent for these commodities. Moreover, the entrance of the United States into the war has greatly increased the requirements of both beef and bacon for the United States Army.

The soldiers need beef and bacon and they can only be supplied if the civilian populations of Canada and the United States will reduce their consumption of these foods. A saving of one ounce of meat per person per day, and increased production of beef and bacon on this continent, would go a long way towards meeting the armies' requirements.

Ginger Pudding.—1-3 cup suet, ½ cup sugar, 1 egg, 2½ cups flour, 3½ teaspoons baking powder, ¼ teaspoon salt, 2 teaspoons ginger, 1 cup milk. Turn into a buttered mould. Cover and steam two hours.

BOTH SIDES MEET IN BERNE.

Men From the Belligerent Nations Are Interned in the Swiss Capital.

At any time of the day in the Swiss capital one sees the uniforms of both sides on the streets, for there are thousands of French, British, Germans and Belgians interned in Switzerland, and according to the rules of the game they must wear their uniforms, in order to make the breaking of parole harder, says a war correspondent.

My first sight of a German Fritz clumping down the streets in his neutral green uniform and his stout military boots gave me a kind of shock of surprise. It is three years now, lacking a month, since—in Belgium—I last beheld a free man in a German uniform. Today I saw dozens of men in Frenes uniform pass other dozens in German uniform. Each party to these meetings would look straight ahead, pretending that he had not noticed.

For the benefit of the Entente peoples the shops are displaying such signs as these: "Swiss manufacture." "Same composition as ——, the German preparation, but of strictly Swiss origin." "This line made of Swiss and English material." Knowingly to buy German goods in the one cardinal sin among the French, American and English colonies here.

Oatcakes with Date Filling.—Make oatmeal cookies with the following: 3 cups flour, 3 cups oatmeal, 1 cup beef dripping, 1 cup sugar, 1 cup sweet milk, 1 teaspoon salt, 1 level teaspoon soda, 2 level teaspoons cream of tartar. Roll thin and cook. Make the following date filling: 1 lb. dates, ½ cup sugar, juice of a lemon. Boil until thick, and spread between oatmeal cookies.

THE RAISING OF SWINE.

Economical Finishing of Hogs at Present Feed Prices.

In choosing feeds for fattening hogs, choice is of necessity more limited than in the case of other classes of stock. With young pigs, where skim-milk and pastures are available, the use of the higher-priced meals and concentrates may, in view of high prices, be limited and full benefit derived from the former cheap, home-produced feeds. With a reasonable amount of wheat middlings, shorts or ground oats, good growthy pigs may thus be produced. For the finishing period, however, a more concentrated, more rapidly fattening ration is required. The swine-feeder at once asks, "How can I profitably finish hogs at present feed prices?"

Corn, barley, oats, middlings and shorts are possibly the five most desirable grains and meals for hogs in Eastern Canada.

With corn at $88 to $90 per ton—barley $60, oats at $65, approximately, and with the two former meals most difficult to procure—some cheaper grain must be used in the finishing ration. Wheat middlings and shorts, even though high in price ($45 approximately), must be relied upon for the major part of the meal ration. At the above price middlings offers digestible nutrients at a lower net cost per ton than any one of the grains previously mentioned. By net cost is meant the total cost of the digestible nutrients, less their manurial value.

Oats, or barley, one part, shorts and middlings, two parts, with some milk product or, lacking the latter, ten per cent. oil meal should supply as economical a growing ration as is generally available. With the likelihood of a material drop in the price of oats and the more problematical prospect of cheaper corn, when the new crop arrives, the above ration could be improved. Corn, shorts, and oats, equal parts with skim-milk is an excellently balanced ration. The addition of corn, even as a small proportion, to the shorts, middlings, skim-milk ration would distinctly improve it as a finishing ration. Corn must, however, reduce materially in price to be considered an economical hog-feed.

At the present time feed wheat, as procurable in Western Canada, forms an excellent hog-feed, as has already been well demonstrated. To the more central and eastern sections this particular feed is not generally available. In many localities, however an elevator by-product known as buckwheat screenings, may now be purchased. Further information concerning the distribution of this material may be had from C. E. Austin, Mgr. Government Terminal Elevators, Fort William, Ont., or the Live Stock Branch, Department of Agriculture, Ottawa.

Analysis of this particular grade of screenings reveals the following constituents: Wild buckwheat, 58 per cent; broken wheat, oats and flax, 29 per cent; weed seeds, 9 per cent; chaff, 4 per cent. In view of the weed seeds present it should be as finely ground as possible.

Experimental evidence, as afforded by swine feeding tests, at the Central Experimental Farm, would go to prove that this material is of considerable value. During the winter of 1914-15, in an experiment calculated to throw light on the value as a hog feed of elevator by-products, as represented by the various grades of screenings, buckwheat compared favorably with a standard meal and milk ration. Two of the rations compared were as follows: No. 1 shorts, three parts; corn, 3 parts, oil meal, 1 part; plus skim milk. No. 2 finely ground buckwheat screenings plus skim-milk. Without entering into the details of this test (see Experimental Farms Report, Vol. 1, 1915) it may be stated that the pigs fed buckwheat screenings, while not so fat as those fed the regular meal ration and standing therefore slightly lower in total gains, stood first in economical production per 100 pounds gain. With the meal ration valued at $28 per ton (1915 prices) and the buckwheat screenings at $14 (nominal) the cost per pound gain was 4.7 cents in the case of the pigs fed the former and 2.7 cents for those fed the latter ration. On the actual prices paid or charged for meal skim-milk and roots, and figuring on the basis of total gains produced by the two lots, buckwheat screenings showed a comparative value of $27.60 per ton.

The swine-feeder would be well advised in making inquiry into this particular feed, the eastern distribution of which is controlled by the Live Stock Branch at Ottawa. From the latter source further announcements may be expected in the near future.—Dominion Experimental Farms Note.

"A SHILLING A DAY."

British Raise Army Pay After 122 Years.

Soldiers of the British army and sailors of the navy have waited patiently for higher pay for the past 122 years. In October they received their first real increase in wages since the year 1795, when the pay of the private soldier was increased to the equivalent of from 16 to 24 cents a day.

"The sodger's wealth is honor," for in ancient days he lived to a great extent on promises, and down to the days of William the Fourth there appears to have been very little regulation in the army paymaster department.

The quotation at the beginning refers to the system of stoppages, in the words of the soldier. He, from stoppages for damages to barracks, used to build a new barracks from his pay every six weeks. He also had to replace worn portions of his kit from his pay, and though he was supposed to get a shilling a day he seldom saw more than a small portion of that sum.

Up to the time of King Edward a sum of 3½d. (7 cents) was stopped for supplementary rations, the ration for the soldier being one pound of meat and one pound of bread per day, and the stoppage was for the providing of the other necessary supplies. This was remitted with the object of giving the private soldier a clear shilling (24 cents) a day. Since that period, with the exception of repairs to kit and barrack damages and 3 cents stopped for national insurance, the private has collected his pay in full.

Under the war Cabinet scheme he will receive 2 cents a day extra for every day he has served and only have to pay part of his allotment of 12 cents a day that was compulsory on married men. The navy men will receive similar increases, and in their case they will be provided with new kits at the Government expense and an addition made to their mess allowance.

The cost to the Exchequer is estimated at $250,000,000 per annum, which, added to the present expenditure, brings the cost of the pay and allowances for the army and navy to $1,250,000,000 a year.

TOO MANY TONGUES.

Three Thousand Known Languages and Dialects on This Planet.

There are three thousand known languages and dialects in the world. No universal tongue exists by which all its inhabitants, or even the vast majority, may make themselves understood unaided by interpreter or translation.

How much time, trouble, and misunderstanding could be avoided if one language were adopted for international intercourse between the Powers, is continually being illustrated in this war. Broadly speaking, there are at least a dozen languages to be reckoned with on the Continent at the present time. Tommy pores over French guides, and the Poilu pores over English ones. Friends meet who cannot converse. Was there ever anything more absurd?

The urgent necessity for a universal tongue was particularly emphasized by the late Inter-Allied Socialist Conference, where matters ended in a deadlock, due largely to the tremendous business involved in coping with the numberless dialects, tongues, and patios spoken by its members. The War Aids Committee devoted an entire morning to the mere translation of the documents concerned, though all this trouble might easily have been avoided if one language had been used.

According to the Scriptures, our world once worked, lived, ruled, and played by the aid of one tongue. But those were the days before the tragedy of the Tower of Babel!

Let Children Blow Bubbles.

There is no better exercise for inducing nostril breathing than blowing bubbles. It is a sheer impossibility to breathe through the mouth and to blow bubbles. In one of the big children's hospitals you may see children daily blowing bubbles, as it helps to expand the lungs and induces deep breathing. Children who blow bubbles frequently at home are not likely to have adenoids.

A WILD LEAP.

Made by a Mountain Sheep as Described by Traveller in Rockies.

The wildest jump I ever saw a mountain sheep take, writes Mr. Enos A. Mills in his book The Rocky Mountain Wonderland, was made a few miles northwest of Longs Peak. In climbing down a precipice I rounded a point near the bottom and came upon a ram at the end of the ledge I was following. Evidently he had been lying down, looking upon the scenes below. The ledge was narrow and it ended just behind the ram, who faced me only five or six feet away. He stamped angrily, struck a belligerent attitude and shook his head as if to say, "I've half a mind to butt you overboard!" He could have butted me overboard. My plan was to fling myself beneath a slight overhang of wall on the narrow ledge between us if he made a move.

While I was retreating along the narrow ledge and considering the wisdom of keeping my eyes on the ram, he moved, and I flung myself beneath the few inches of projecting wall. But the ram did not charge me; instead, he made a wild leap off the ledge.

It looked like a leap to death. He plunged down with his head forward, and a trifle lower than his rump, with his feet drawn upward and thrust forward. I looked over the edge. The first place he struck was more than twenty feet below me. When his fore feet struck, his shoulder blades jammed upward as if they were about to burst through the skin. A fraction of a second later his hind feet also struck and his back sagged violently; his belly must have scraped the slope. He bounded upward and outward like a heavy chunk of rubber. This contact had checked his deadly drop. His second striking place was on a steeply inclined buttress; apparently in his momentary contact with it he altered his course with a kicking action of his feet.

His foot action was lightning-like, and from that buttress he veered off and came down violently, feet first, upon a shelf of granite. With a splendid show of physical power, and with desperate effort he got himself to a stand with stiff-legged, sliding bounds along the shelf. Here he paused for a second, then stepped out of sight behind a rock point.

Feeling that he must be crippled, I scrambled up and hurried to a promontory from which to look down upon him. He was trotting down a slope without even the sign of a limp.

NATURE AS A PACKER.

Brazil Nuts Grow in Neat Spherical Boxes.

Everybody is familiar with Brazil nuts (sometimes called "monkey nuts"), but few people know how they grow.

Nature furnishes them in ready-made packages, i.e., put up in neat, spherical boxes that are the fruit of a tree and that contain the nuts, which are seeds.

Such a box, half the size of a cocoanut, with a rough coat, is a quarter of an inch thick and contains twenty-odd nuts, so neat and closely packed that if they are taken out no human skill can put them all back again into the receptacle.

There is another kind of tropical tree that has its nuts inclosed in a similar "pericarp," popularly known as the "monkeypot." It has a removable lid which, when taken off, discloses an opening just big enough for a monkey to put his hand in. To grasp the coveted nuts he closes his fist, and then finds himself unable to withdraw it. This is one of the most painful embarrassments to which a monkey can be exposed.

An Inexperienced Marshal.

The London Times tells of an old Irishman, long desirous of official dignity, who was finally appointed marshal in a parade on the king's birthday. Veterans, bandsmen and school children lined the streets of the town, patiently waiting the signal to start.

Suddenly the marshal, on a prancing charger, dashed up the street. After inspecting the procession, he gave his horse a touch with the whip, stood up in his stirrups and shouted:

"Ready, now! Every one of yer kape shtep wid the horse! March!"

Teasing a baby to make it laugh is a crying shame.

STORY OF THE FRONT LINE

GAINING INFORMATION REGARDING THE ENEMY.

A Private of an English County Regiments Tells of a Dangerous Reconnoitring Expedition.

"We had made a bit of an advance, Pilkem way," said a Midland soldier of one of the English county regiments, exceedingly cheerful despite a badly smashed femur, "and we had got our position fairly well consolidated. But the Colonel wanted to know what line the enemy were holding opposite us, so he decided to send out a patrol to reconnoitre. My platoon officer volunteered for the job, and he asked for three of us to go with him. It's not very nice work patrolling during the day time. You never know where a German may lie lying with his rifle handy. But seeing it was our officer who asked, of course we all offered, and I was one he took.

"We crawled out of our trench and got going quite well at first. The ground was so cut up by our shell fire that there was plenty of cover. We must have crawled nearly three hundred yards before seeing a live German. There were plenty of dead ones, though, lying about in shell-holes and bits of smashed trenches. It is only when you go over the ground where our barrage has been busy that you get a true idea of what our guns can do, and what they are costing the Germans.

Only One Escaped.

"We were getting along quite nicely when we suddenly discovered the Germans. They were holding a fairly well organized line barely fifty yards ahead of us. They must have seen us coming, and just let us come on, hoping to do the whole lot of us in. Two machine-guns opened fire on us, one from either side, and they laid out everyone but myself. A big shell hole was close beside me, and I jumped into that and lay quiet, listening to the bullets whistling in the edges of the shell hole.

"After a minute or two the firing stopped, and I took a peep over the side. A German patrol was coming towards me as cool as anything, hardly troubling to bend their heads even. I think they imagined that we were all laid out. I popped my rifle out and taught two of them different. Then the rat-tat started again, and I had to take cover.

"When I looked over again they were trying to work round me, crawling as flat as they could. I did not fancy being taken a prisoner, so I thought I would try a run for it, especially as our people badly wanted the information I'd got. I got out of the hole and bolted off as fast as I could. I heard the racket start behind me; but I was within a yard or two of our trenches before they knocked me over.

"One of our officers crawled out and dressed my wound. He could not get me back that night, for the Germans had their machine-gun playing on the spot. We had just to lie quiet, and it was a good thing for us we had cover. I told him what we had found out, and he shouted the information over to our chaps in the trench. Our guns started shelling the beggars shortly afterwards, and while this was going on they got me in."

Forty Years of the Telephone.

"It seems hard to believe, but I can remember when there were no telephones," said Prof. Alexander Graham Bell to a lecture audience the other day. Whereat, of course, there was a shout of laughter.

A photo of the original models of the telephone transmitter and receiver, taken at the Patent Office, shows that the latter was meant to be poked into the ear of the listener. Odd idea, was it not?

The first telephone was patented by Professor Bell in 1876. But other inventors, particularly Emile Berliner, the originator of the disk phonograph, were largely responsible for its development, especially for long-distance talking.

The world's greatest wireless station has been built in Italy, powerful enough to communicate with North and South America when similar stations are erected on this side of the Atlantic.

The Doings of the Duffs.

Hard to Drop Meat?
All depends on what you eat as a substitute. It is a good time to study "food value." You may be eating the wrong foods, the foods that cost most and give the least nutriment. **Shredded Wheat Biscuit** contains more real, body-building nutriment, pound for pound, than meat, eggs or potatoes and costs much less. Two of these Biscuits with milk and a little fruit make a nourishing meal at a cost of a few cents. Make Shredded Wheat your "meat." A satisfying breakfast on which to start the day's work. It is ready-cooked and ready-to-eat. Made in Canada.

The One-Piece Dress

The one-piece dress is vastly becoming to the small girl. The touch of wool embroidery on the collar, cuffs and belt is most attractive. McCall Pattern No. 8012. Girl's One-Piece Dress. Pattern in 5 sizes; 6 to 14 years. Price, 15 cents.

The simplicity of this dress will appeal to many women. It is to be slipped on over the head. Made in worsted, shepherd's plaid or any other warm material, it makes a splendid dress for winter wear. McCall Pattern No. 7884, Misses' One-Piece Dress. In 4 sizes; 14 to 20 years. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Save
In the Use Of Wheat

BOCHE A PSYCHOLOGIST.

Changes His Tactics to Suit Racial Tendencies of Opponents.

The Boche is a psychologist. Not a very good one—but in his fighting on the western front he makes good use of a certain insight into the different racial characteristics of the English and the French. A British military expert points out the difference in the ways the Germans meet the offensives of the two countries in the following way.

"When the British hammer a certain sector into pulp and then launch an attack," he said, "the German generals withdraw all but a few machine gunners from the first line trenches, leaving these to hold out as long as possible and face certain death or capture. They know that the British are going to get to their objective.

"The main body of the men are rushed back to reserve trenches in the rear, where they prepare for a counter-attack. They feel fairly certain that the British will reach their objective, consolidate it and stay there.

"On the other hand, against the French, they adopt just the opposite tactics. They crowd just as many men as possible into the front lines. Machine gunners, bombers and rifleмen are packed in like sardines.

"They adopt this course because they appreciate the Latin temperament of the average Frenchman. They know that if they can administer a severe check early in the fighting the French will fall back, while if the tricolor once gets through it's quite likely to sweep on to a tremendous victory."

NERVOUS AILMENTS

Few people realize that nervous ailments often arise from digestive troubles. The stomach fails, for some reason, to digest food properly. Then the system languishes and the nerves become exhausted in striving to continue their work. Impure blood also causes nerve troubles, but frequently it is in the stomach where the mischief starts. As the nourishment is carried to the nerves by the blood, it will be seen what an important connection exists between the stomach, the nerves and the blood, and how such troubles as nervous headaches, nervous dyspepsia and insomnia may begin.

In such cases relief is easily obtainable by means of Dr. Williams' Pink Pills. These pills replenish the blood with the food elements on which the nerves thrive; at the same time they exercise a tonic influence on the digestive organs, enabling the system to derive nourishment from the food taken. By this perfectly natural process nervous ills are steadily dispelled by Dr. Williams' Pink Pills. If you are suffering from nerves, or require a blood-making tonic, give these pills a fair trial, and see how speedily the best of health will be yours.

You can get these pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

CANADA'S FIRE LOSSES.

More Than Four Million Dollars Damage From Trifling Causes.

A man dropped a lighted match on the shore of Kalamalka Lake, British Columbia, on July 8th last. Within an hour a hot fire was racing through the underbrush. For three weeks after that there raged a series of forest fires, defying the organized efforts of hundreds of men.

At one time, 26 fire fighters were ringed about with flames while their relatives, shut off from them and helpless to aid, awaited news in terrorized suspense. Only after severe suffering from exhaustion, thirst and hunger did the band of workers force their way through to safety.

That experience is a big price to pay for one person's foolish act in handling matches in a forest. The court fined the careless man $50 but that does not help the province to bear the enormous loss.

One lighted match dropped on one inch of inflammable ground expanded into fifteen miles of ruin.

In the Spruce Valley fire of British Columbia of the same month, eleven men lost their lives, most of them tortured to death as they struggled over the mountain tops. The fuse to that disaster was supplied by a small piece of lighted tobacco carelessly thrown on the grassy floor of a tent.

Four out of five tragic holocausts could be avoided if every Canadian camper and fisherman kept vigilant watch on his own pair of hands, and every settler kept a tight rein on his clearing fires. It does not cost five cents or five minutes to put out a camp fire or a cigarette or a match, but it costs the people of Canada four or five million dollars a year to partially overtake the timber damage caused by runaway flames.

"When you have read you carry away with you a memory of the man himself; it is as though you had touched a loyal hand, looked into brave eyes and made a noble friend."
—Stevenson.

CHINA, PRINTING PIONEER.

Movable Type Decked by Oriental Blacksmith in Eleventh Century.

Those who believe printing to have been invented in Europe during the fifteenth century may have been surprised to read of Cambridge University having acquired "the works of the Chinese philosopher, Liu Tsung Yuan, printed in 1056."

China has been credited with anticipating not a few modern inventions, but her claim to have discovered the art of printing centuries before its adaption in Europe is beyond dispute.

An edition of most of the Chinese classics was printed by means of wood blocks in A.D. 932, and movable type is said to have been devised by a blacksmith, Pi Shing, in the eleventh century.

SATISFIED MOTHERS

Once a mother has used Baby's Own Tablets for her little ones she will use nothing else. The satisfaction she derives from their use is wonderful. They are easy to give the baby; their action is prompt and thorough and above all they are absolutely harmless. Concerning them, Mrs. Jean Berthiaume, Lacoudaire, Sask., writes: "I am well satisfied with Baby's Own Tablets. I had no trouble in giving them to my baby and they have promptly cured her of constipation." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr Williams Medicine Co., Brockville, Ont.

LUSITANIA WAS DOOMED

Bombs in Hold Would Have Destroyed Her Before Journey's End.

The German submarine captain who torpedoed the Lusitania sunk a ship already doomed, according to a statement made on October 11th at police headquarters in New York by Martin Ibsen, a German lawyer, editor of a department in the New York Herald. Ibsen has been in the United States twenty years and is still a German subject. He admitted he was connected with three men arrested and charged with conspiracy to plant bombs on ships bound from New York to allied ports in 1915 and early in 1916.

Ibsen's story indicates that the Lusitania when she left New York carried in her hold nine T.N.T. bombs, timed to go off when the big liner was nearing the coast of Ireland. Conspirators evidently figured that the Lusitania would travel faster than she did, for the bombs had not worked when she was torpedoed off Kinsale Head, on the south coast of Ireland.

Dr. Karl Schimmel, who had a law office in New York in 1915 and 1916, and is now believed to be in Germany, was in charge of placing bombs on steamships according to information in the hands of Captain Tunney, head of the New York police department bomb squad.

Ibsen told Captain Tunney that he was in Schimmel's office when news came in that the Lusitania had been sunk by a torpedo. Schimmel, according to Ibsen, wept, tore his hair, and stamped up and down the room.

"The fool!" shouted Schimmel. "He has ruined my work. I had nine 'cigars' planted on the Lusitania and they would have destroyed her before she had reached Liverpool."

A T.N.T. bomb was called by the conspirators a "cigar."

MURINE Granulated Eyelids, Sore Eyes, Eyes Inflamed by Exposure, Dust and Wind Quickly Relieved by Murine. Try it in Your Eyes and in Baby's Eyes. No Smarting, Just Eye Comfort
YOUR EYES
Murine Eye Remedy Liquid, Eye Salve in Tubes or Eye Salve in Tubes No. 2 (Non-Bacterial). For Use of Children and Grown Ups. Murine Eye Remedy Co., Chicago

If cereals, rice or similar foods stick to the vessel in which they are cooked they have an adhesiveness that a postage stamp might envy; but put a cupful of wood ashes in the pot, fill it with water and leave it to soak, and presto, it is easy to clean.

Minard's Liniment Co., Limited.
Gentlemen,—I have used MINARD'S LINIMENT on my vessel and in my family for years, and for the every day ills and accidents of life I consider it has no equal.
I would not start on a voyage without it if it cost a dollar a bottle.
CAPT. F. R. DESJARDIN,
Schr. "Storks," St. Andre, Kamouraska.

Flapping Shades.

Often it is necessary to lower the shades when the windows are open, which causes a constant flapping. I remedied this in a simple, inexpensive, yet effective way. I got some small screw eyes and fastened one on each end of the lower shade stick, one on the top and one on the bottom on each side of the window casing. Then I fastened thin cord to the bottom eyelet, ran it through the shade eyelet and fastened it to the top screw eye. If this is done on each side of the shade the window can be left wider open and the shade will stay where you want it. This does not interfere with the raising and lowering of the shade, and if the cord is purchased the same color as the woodwork it will be unnoticeable.

Minard's Liniment Cures Distemper.

FREE TO GIRLS

We will give this beautiful prize free of all charge to any girl or young lady who will sell 40 packages of our lovely embossed Xmas postcards at 10 cents a package.
This Extension Bracelet is of rolled gold plate and fits any arm.
Send us your name and we will send you the cards. When sold send us the money and we will send you the Bracelet. Address:

CANADIAN "LINGUISTS."

Boys Eager To Learn More of the Language of Their Allies.

Young Jack Cunuck returned from the front is proud of his assorted vocabulary. He talks a bit of Russian, Turco, Arabic, Greek and German, to say nothing of French and Cockney slang. In the words of the Military Convalescent Hospitals he trots them all out and shows the greatest eagerness to learn more of any of them.

Many of the boys who are in the eastern convalescent homes of the Commission are taking French lessons. They practise in conversation with their French comrades and are making great strides, just as many of the French who never spoke English before are mastering their language."

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.
Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

She Loved Ferment.

A little schoolgirl was told by her teacher to write the word "ferment" on her slate together with the definition and a sentence in which the word was used. The following is the result: "F-e-r-m-e-n-t; a verb, signifying to work. I love to do all kinds of fancy ferment."

Minard's Liniment Cures Diphtheria.

A Large Edition.

"May I print a kiss on your lips?" I asked;
She nodded her sweet permission.
So we went to press, and I rather guess
We printed a large edition.

MONEY ORDERS

It is always safe to send a Dominion Express Money Order. Five dollars costs three cents.

One Chinese province annually exports more than 150,000 tons of peanuts, all because an American missionary several years ago gave a native convert a quart of California seed.

From indications, the Stock Show to be held at the Union Stock Yards of Toronto, December 7th and 8th next, will be bigger than ever. The 1916 show had 376 entries, comprising in all 2,309 show animals, which sold for the Christmas trade, some of which brought record prices. Premium list has been enlarged and each class carries a handsome prize. For further particulars write C. F. Topping, care of Union Stock Yards of Toronto.

Potatoes showing signs of dry rot, caused by blight, should be well dried before storing, and all affected tubers put away by themselves until fed to the live stock or otherwise disposed of. This disease will spread in the bin.

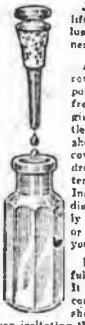
Minard's Liniment Cures Colds, &c.

An effect of the labor shortage is seen this year in the reduced number of turkeys and geese at the Fall exhibitions. Women of the farms have been driven to devoting much of their time formerly spent on poultry raising to helping the men folk in the fields.

DODD'S KIDNEY PILLS
FOR ALL KIDNEY DISEASES
CURES RHEUMATISM BRIGHT'S DISEASE BACKACHE DIABETES
NUMBER 23 THE PROPRIETORS

To the Nurses of the Empire.

We did not need to ask you,
You came with loyal heart,
And, faithful to your calling,
With zeal, to do your part,
You knew the cause was righteous,
You heard the great appeal,
And willingly you offered
To soothe, to cheer, to heal.



We do not need to tell you
How great your trials be;
We bless you for your goodness,
And pray for victory;
Whate'er may yet befal us,
In conquest or defeat;
A nation kneels to thank you,
A supplliant—at your feet.

We do not need to thank you,
Mere words would not suffice;
Ten thousand lives restored—
This is your sacrifice;
Ten thousand, aye, ten thousand,
Lift up their hearts to-day
To thank you, bless you, love you,
This is your victory.
—John Light, London, Eng.

Minard's Liniment Cures Garget in Cows

Educate the mother and save the child.

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN
Apply a few drops then lift corns or calluses off with fingers—no pain.

Just think! You can lift off any corn or callus without pain or soreness.
A Cincinnati man discovered this ether compound and named it freezone. Any druggist will sell a tiny bottle of freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.
Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.
Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't freezone, tell him to order a small bottle for you from his wholesale drug house.

A Dyspepsia Cure
M.D. advises: "Persons who suffer from severe indigestion and constipation can cure themselves by taking fifteen to thirty drops of Extract of Roots after each meal and at bedtime. This remedy is known as Mother Seigel's Curative Syrup in the drug trade." Get the genuine. 50c. and $1.00 Bottles.

Bruises and Sprains
Have Sloan's Liniment handy for bruises and sprains and all pains and aches. Quick relief follows its prompt application. No need to rub. It quickly penetrates to the trouble and drives out the pain. Cleaner than mussy plasters or ointments. Sloan's Liniment does not stain the skin nor clog the pores. For rheumatic aches, neuralgia, stiff muscles, lame back, lumbago, gout, strains, and sprains, it gives quick relief.
Generous sized bottles at all druggists. 25c., 50c., $1.00.
Sloan's Liniment
KILLS PAIN

The Minneapolis and St. Paul railway is planting trees by machinery to replace snow fences.

MISCELLANEOUS
BEAGLE HOUND PUPS, THREE months old, of the world's best breeding, fifteen and twenty dollars each. Thos. Gilbert, Box 484, Walkerville, Ont.

Clear Your Complexion While You Sleep
On retiring gently smear the face with Cuticura Ointment. Wash off in five minutes with Cuticura Soap and hot water, using plenty of Soap and continue bathing a few minutes with Soap. Rinse with tepid water. The cleansing, soothing influence of this treatment on the pores extends through the night. It may be repeated on rising.
Sample Each Free by Mail. Address postcard: "Cuticura, Dept. M, Boston, U. S. A." Sold throughout the world.

NOTICE TO SICK WOMEN
Positive Proof That Lydia E. Pinkham's Vegetable Compound Relieves Suffering.

Bridgeton, N.J.—"I cannot speak too highly of Lydia E. Pinkham's Vegetable Compound for inflammation and other weaknesses. I was very irregular and would have terrible pains so that I could hardly take a step. Sometimes I would be so miserable that I could not sweep a room. I doctored part of the time but felt no change. I later took Lydia E. Pinkham's Vegetable Compound and soon felt a change for the better. I took it until I was in good healthy condition. I recommend the Pinkham remedies to all women as I have used them with such good results."—Mrs. MILPOND T. CUMMINGS, 322 Harmony St., Penn's Grove, N. J.
Such testimony should be accepted by all women as convincing evidence of the excellence of Lydia E. Pinkham's Vegetable Compound as a remedy for the distressing ills of women such as displacements, inflammation, ulceration, backache, painful periods, nervousness and kindred ailments.

Material on hand—3 pre socks, 1 pr mitts, 1 scarf and 6 caps.

Receipts—Membership fees $43, donations—Mrs McKay $27, I O O F Sewing $10, collected by R J Nesbitt $5, Mrs H Campbell $5, Robert Russell $3 00, Mrs D C McKinnon $2, Mr Neil McKay $2, Mrs Malcolm $2, Miss Ada McKinnon $1, Miss Eva McKinnon $1, Mrs W R McKinnon $1, Mrs W R McNeily $1, John McNeil $1, Mrs Allan Robertson $1; smaller donations—Rev E C Cragg $1 50, Mrs McKinnon, Donnelly, Mrs Napier, Mrs Wooster, Miss Kirkpatrick, Miss Hooton, Frank McLennan, amounting to $8 50; grants—Glamis Tp Co, from Council $25, from Greenock Tp $20; Myrtle Tp $25 00, the gives by Mrs Cunningham $6 50, Mrs Dr Deehan $10 00; tea by Mrs Neil McKay $11 45; tea by Mrs J H Robertson $13 00, proceeds box social $10 85, collection given by Rev Cragg $21 70, collected for cottage on boxes $21 20, collections at meetings $2 37, bal of money collected for overseas boxes for 1918 80c; cash for yarn sold 75c; credit on yarn account $1 85; Proceeds on sewing sold by Mary Deehan $1 20; total receipts $343 97. Paid out $473 34, leaving a balance in treasury of $29 63.

PINKERTON

Messrs D Pinkerton and A Gregg have gone to the peninsula to hunt deer.

Mr Jas Gale, of Toronto, spent a few days at his home here.

On Thursday evening of last week the Young People's Society held a social evening at the home of Mr John Morris. A large number of young people enjoyed themselves playing many kinds of games.

On Monday morning of this week the lifeless body of Charlie Russell, who has been missing for the past three weeks, was providentially found by a hunter in Mr Adam Reid's bush. The deceased, on being summoned to appear as witness in court, left his home, and although search parties were out nearly every day he could not be found. Dr Porter, of Walkerton, was at once summoned, and an examination of the body by persons on hand at the time was found. The body was removed to the home of his sister, Miss Janet Russell, and the funeral took place on Wednesday morning to the R C cemetery at Chepstowe.

On Friday night the local branch of the Union Canada Temperance held their annual meeting. Rev Mr Hosmer gave a splendid address on the work of the Society.

GRESHAM

Mr Jas A McKinnon and sons are working at Southampton this week. Mr Stallard is foreman of the concrete works and wife visits at the McKinnon home.

Mrs Lee Shipley returned home this week after having some time visiting at the home of her sister on the 10th con. who is improving fine.

Mr F Curry accompanied by Miss Curry and Miss Hanna, motored to Southampton last week.

We understand all our boys here have complied with the Military Service Act.

The bridge below Ashdale is on this con. is being filled in by McGillivray Bros, and is now passable.

Mr H S Young is assisting in Underwood store for a short time.

The local ring held a meeting at Mr Wilkerson's last week, electing up the business of the season. Everyone was satisfied.

ELORA ROAD NORTH

Mr John McPhee is in Walkerton hospital, having undergone an operation for appendicitis last Tuesday.

Mr Thos Irwin motored a party of friends to Walkerton last week.

Mr and Mrs David Bryce visited in Walkerton last week.

Messrs Sparrow and Fraser had a plowing competition at Mr Winch's last Wednesday. We understand that Mr Winch has purchased the auto tractor.

Mr J McFarlane has went to Toronto with a load of cattle last week.

Mr and Mrs R Winch motored to Owen Sound on Monday.

Central Business College
Stratford, Ont.

Ontario's Best Commercial School

Courses are thorough, instructors are experienced, students get individual attention and graduates are placed in positions. Opening 6 months we turned down over 300 calls for trained help. This is the school for those who want the practical training and the good positions. Commercial, Shorthand and Telegraphy departments. Write for catalogue. W J Elliott, Pres. D A McEachern, Prin.

TWELFTH CON BRUCE

Mr Alex McGillivray lost a valuable colt lately.

Mrs A McLeod and Fred were visiting in Saugeen last Sunday.

Mr George Greer has returned from the west.

Mr and Mrs Duncan Beaton's baby is improving nicely.

Mrs Wm Morris and children were visiting at Underwood for a week.

Mr Eldon McGillivray Sundayed at his home here.

Everybody who has a car was out on Sunday, although it was so muddy they think the fall is nearly over. The snow birds are flying round very plentiful.

November came in with a snow storm, giving the men a rest for a day and a half when they could not plow, but has been fine weather ever since.

Mr Archie McDougall was over to Owen Sound for medical examination. He passed in Class A.

Mr and Mrs Wm Morrison were calling on the twelfth on Saturday.

ELDERSLIE COUNCIL

Gillies Hill, November 5, 1917.

Council met on above date. All the members present.

A communication was received from the clerk of the place, showing that the reeve, assessor and clerk had each performed his duty as selector of jurors.

The Minister of Finance offers for Public Subscription

Canada's Victory Loan

Issue of

$150,000,000 5½% Gold Bonds

Bearing interest from December 1st, 1917, and offered in three maturities, the choice of which is optional with the subscriber, as follows:

5 year Bonds due December 1st, 1922
10 year Bonds due December 1st, 1927
20 year Bonds due December 1st, 1937

This Loan is authorized under Act of the Parliament of Canada, and both principal and interest are a charge upon the Consolidated Revenue Fund. The amount of this issue is $150,000,000, exclusive of the amount (if any) paid by the surrender of bonds of previous issues. The Minister of Finance however, reserves the right to allot the whole or any part of the amount subscribed in excess of $150,000,000.

The Proceeds of this Loan will be used for War purposes only, and will be spent wholly in Canada.

Principal and Interest payable in Gold
Denominations: $50, $100, $500 and $1,000

Subscriptions must be in sums of $50 or multiples thereof.

Principal payable without charge at the Office of the Minister of Finance and Receiver General at Ottawa, or at the Office of the Assistant Receiver General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary and Victoria.
Interest payable, without charge, half-yearly, June 1st and December 1st, at any branch in Canada of any Chartered Bank.

Bearer or Registered Bonds

Bonds may be registered as to principal or as to principal and interest.

Scrip certificates, non-negotiable, or payable to bearer, in accordance with the choice of the applicant for registered or bearer bonds, will be issued after allotment in exchange for provisional receipts. When bearer scrip certificates have been paid in full, and payment endorsed thereon by the bank receiving the money, they may be exchanged for bonds, when prepared, with coupons attached, payable to bearer, or registered as to principal, or for fully registered bonds when prepared, without coupons, in accordance with the application.

Delivery of interim certificates and of definitive bonds will be made through the Chartered Banks.

Bearer bonds with coupons will be issued in denominations of $50., $100., $500., and $1,000. and may be registered as to principal only. Fully registered bonds, the interest on which is paid direct to the owner by Government cheque, will be issued in denominations of $1,000., $5,000. or any authorized multiple of $5,000.

Subject to the payment of 25 cents for each new bond issued, holders of fully registered bonds without coupons, will have the right to convert into bonds of the denomination of $1,000 with coupons, and holders of bonds with coupons will have the right to convert into fully registered bonds of authorized denominations without coupons, at any time, on application to the Minister of Finance.

Surrender of Bonds

Holders of Dominion of Canada, Debenture Stock, due October 1st, 1919, and bonds of the three preceding Dominion of Canada War Loan issues, have the privilege of surrendering their bonds in part payment for subscriptions to bonds of this issue, under the following conditions:—

Debenture Stock, due October 1st, 1919, at Par and Accrued Interest.
War Loan Bonds, due December 1st, 1923, at 97½ and Accrued Interest.
(The above will be accepted in part payment for bonds of any of the three maturities of this Issue)

War Loan Bonds, due October 1st, 1931, at 97½ and Accrued Interest.
War Loan Bonds, due March 1st, 1937, at 96 and Accrued Interest.
(There will be accepted in part payment for bonds of the 1937 maturity ONLY of this Issue.)

Bonds of the various maturities of this issue will, in the event of future issues of like maturity, or longer, made by the Government, other than issues made abroad, be accepted at par and accrued interest, as the equivalent of cash for the purpose of subscription to such issues.

Issue Price Par

Free from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

Payment to be made as follows:

10% on December 1st, 1917 — 20% on March 1st, 1918
10% on January 1st, 1918 — 20% on April 1st, 1918
20% on February 1st, 1918 — 20% on May 1st, 1918

A full half year's interest will be paid on 1st June, 1918.

The Bonds therefore give a net interest yield to the investor of about:

5.61% on the 20 year Bonds
5.68% on the 10 year Bonds
5.81% on the 5 year Bonds

All payments are to be made to a Chartered Bank for the credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture, and the allotment to cancellation. Subscriptions accompanied by a deposit of 10% of the amount subscribed, must be forwarded through the medium of a Chartered Bank. Any branch in Canada of any Chartered Bank will furnish application and issue provisional receipts.

In case of partial allotments the surplus deposit will be applied toward payment of the amount due on the January instalment.

Subscriptions may be paid in full on January 2nd, 1918, or on any instalment due date thereafter under discount at the rate of 3½% per annum. Under this provision payments of the balance of subscriptions may be made as follows:

If paid on January 2nd, 1918, at the rate of $0.10795 per $100.
If paid on February 1st, 1918, at the rate of $0.64849 per $100.
If paid on March 1st, 1918, at the rate of $0.73774 per $100.
If paid on April 1st, 1918, at the rate of $0.89950 per $100.

Forms of application may be obtained from any branch in Canada of any Chartered Bank, or from any Victory Loan Committee, or member thereof. The books of the Loan will be kept at the Department of Finance, Ottawa.
Applications will be made in due course for the listing of this issue on the Montreal and Toronto Stock Exchanges.

Subscription Lists will close on or before December 1st, 1917.

Department of Finance,
Ottawa, November 12th, 1917.

Why Suffer With Backache, Kidneys or Bladder Ills?

Letter Tells of Long-hoped-for Prescription.

Dear Readers—If I can do any good in the world for others, I wish to do it, and I feel that it is my duty to write of what the wonderful results I received from the use of "Anuric." I was suffering from kidney and bladder troubles, pain in the urine, backache and rheumatism, and feet and ankles swelled so that at times I could not walk without assistance. Had taken several different kinds of kidney remedies but all failed. I sent for a box of Dr. Pierce's newest discovery, "Anuric," which I received by mail in tablet form. I soon got better and am convinced that this popular new medicine is good. I wish to recommend it to my neighbors and everybody suffering from such troubles.

Mrs. M. J. Sabbert.

Note: You've all undoubtedly heard of the famous Dr. Pierce and his well-known medicines. Well, this prescription is one that has been successfully used for many years by the physicians and specialists at Dr. Pierce's Invalids' Hotel and Surgical Institute, of Buffalo, N. Y., for kidney complaints, and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine, and urinary trouble.

Up to this time, "Anuric" has not been on sale to the public, but by the persuasion of many patients and the increased demand for this wonderful healing Tablet, Doctor Pierce has finally decided to put it into the stores, or send 10 cents for large trial package or 30 cents for full treatment.

Simply ask for Doctor Pierce's Anuric Tablets. There can be no imitation. Every package of "Anuric" is sure to be Dr. Pierce's. You will find the signature on the package just as you do on Dr. Pierce's Favorite Prescription, the ever-famous friend to ailing women, and Dr. Pierce's Golden Medical Discovery, proven by years to be the greatest general tonic and reconstructor for any one, besides being the best blood-maker known.

Ladies' Furs

We have all the latest 1918 styles in black and colored Furs at 25 per cent discount off regular prices, and our furs were bought before the recent advances in prices. Note our prices: Sable Collar and Muff reg price $57.50 for $43.00; Black Wolf Collar and Muff reg $42 for $27.25; Black Fox Stole and Muff $70 for $52.50; Natural Opposum Stole and Muff $21.75 for $16.50; Golden Fox Stole and Muff $27.50 for $20.60; Vienna Fox Stole and Muff $44.50 for $30.88; Grey Opposum Stole and Muff $27.50 for $20.62; one only Musk Marmot Muff $10 for $7.50; one only Canadian Rat Muff $12.50 for $8.38; Black Wolf Muff $10 for $7.50; Black Wolf Stolee $8 for $6; Musk Marmot Stolee $5 for $3.75. See our one only Natural Lynx Set reg $31.75 for $23.80.

All these Ladies' Coats and Furs are direct from the best ladies' coat makers and furriers in Canada, and will be sold at less than the cost of production. We have another very reasonable line of goods at special prices considering the state of the markets of the world, viz:

Footwear of All Kinds

Including the celebrated Life Buoy Rubbers from the daintiest over rubbers in all the new heels to the heaviest and best Lumbermen's Rubbers and Overshoes. It is very desirable that you should come to this store and see these goods, examine them, try them on, note the prices, and we will abide by your judgment.

All goods sold at cut prices must be spot cash or farm produce at time of sale. Remember, a basket of butter, eggs or well dressed poultry will take out more goods on the average at our regular prices than ever before, and when you get 25 per cent off Mantles and Furs at this season of the year it puts a large premium on your dollars and produce. Nothing better except Victory War Loan. Owing to heavy buying months ago and taking goods in these lines that will be scarce next year and having to pay for them long before needed, we must ask payment of all accounts before 1st Dec. Please call in and settle, also come early and often and examine goods and see our prices.

Ladies

See our Ladies' Hats in window at half price.

THE PAISLEY MERCANTILE CO.

THE CITY BAKERY

Conserve! Conserve!

We are proud to say we have the cheapest food on the market. BREAD! BREAD! BREAD! Eat more bread. Save more money.

We have on hand a variety of specialties, only mention a few—California Grapes, Spanish Onions, Sultana Raisins in bulk, Apples, Sardines selling 2 cans for 25c, Layer Raisins, Pimento Cheese, Marchineo Cherries in the bottle, all kinds of Confectionery, Nut Bars in abundance, Boxes of all kinds.

Did You Ever Use Crisco?

Why not? Cheaper than lard. We have it.

All accounts must be settled by Dec. 1st. Do not forget this.

Turkeys	25	30

Butter 40c, eggs 45c. L C SPOFFORD.

—Miss Barbara McAllister of Gillies Hill is visiting her aunt in Walkerton.

—Mrs Geo Mackay and daughter of Thornbury, are visitors at the home of her father, Mr Geo Grant.

—C. K Boyd, V. S., has returned from Tilbury, where he was for several days on an important errand.

—Miss McCallum attended the Library Institute in Guelph last week, and visited Listowel friends for a day.

—Miss Gertie Megraw went to Walkerton hospital a few days ago and had an operation for appendicitis.

—Mrs H Wagner and young son were up from Newton over Sunday visiting her mother, Mrs Storrie, Rose St.

—Lt John Rowand Geddes, son of Mr and Mrs Alex Geddes, of Burgoyne, was killed in France. He was with the Royal Flying Corps.

—Calves sold up to $86 a pair at Mr R Parker's sale, 8th Bruce, and a Hereford grade cow brought $131.50. It was a good sale throughout, with auctioneer Pearce on the block.

—Mr Beverley McArthur, son of Mr and Mrs D McArthur, of Paisley, had enlisted at Saskatoon. Although he had been farming in the west, he did not apply for exemption.

—Mr Gilbert McLaughlin has sold his farm, lot 24, con 10, Elderslie, to Councillor Jas Lewis, who gets possession in March. Mr McLaughlin is obliged to give up farming on account of his health. He will have a sale on Dec 4th.

—Mr Jas McGill and family, who recently returned to Vesta from the west, have taken up their residence in Paisley occupying one of the new Collins houses on Victoria St north. Mr McGill is taking the Ford agency here.

—The Ontario Women's Christian Temperance Union have four V. M. C. A. men at the front serving hot tea, coffee, cocoa, soup and biscuits, also literature, entirely free to the soldiers as they come from the battles. Mrs H B Putnam is treasurer for Bruce County W C T U and any donation for the V M C A Fund will be sent direct to headquarters.

—While THE ADVOCATE is giving a list showing how the applications for exemption are dealt with, we have no desire to publish the evidence that would make public the details of each man's personal, domestic and business affairs. It is enough that the tribunals should hear these matters and decide upon each application.

Killed in Action

Corp. John Hamilton, artillery man, was killed in action, on Nov 10th, in the word that has come to his father, Mr J Hamilton, just as we are preparing to go to press.

Unionist Meeting

Paisley supporters of Union Government are requested to meet in the Council chamber on Thursday evening, Nov 22, at 8 p m, to organize committees and arrange for the campaign. D McKenzie, Vice-President.

Women's Meeting

Mrs W H Hecker, of the Ontario Women's Citizens' Association, will address a meeting of ladies in the town hall, Paisley, on Monday Nov 26th, at 4 p m. All ladies, especially soldier's relatives, are invited to attend and hear this speaker.

Evangelistic Services

The special services being conducted every night in the Baptist church by Rev V L Shanis of Chesley, are being well attended, and a deep interest is manifested. Some of the subjects that are to be discussed by Rev Mr Shanis during the series of meetings are the following:—"The Failure of Christ," "The Great Things of the World," "Will a God of Love Send a Soul to Hell?" "Is the World Getting Better?" "Excuses," "Hypocrites." Song service each evening at 7.30. Everybody welcome.

—Umbrella lost between Hanna House and station. Finder please leave at Advocate Office. H. Sellers.

—Auction sale of farm stock and implements, on lot 14, con 10, Elderslie, on Tuesday, Dec 4th. Gilbert McLaughlin, prop; R C Pearce, auct.

Hog Production Meetings

There will be a public meeting in the Library building, Port Elgin, on Friday, Nov 23rd, at 2 p m, for the purpose of organizing for further hog production, and at Underwood Tp Hall at 8 p m of same date. A speaker from Dept of Agriculture will address both meetings. N C McKAY, Agr. Rep., Walkerton.

"Bringing up Father" Coming Here

Tom Marks with his popular company and Kiltie Band will appear in the town hall, Paisley, one night only, Monday Nov 26th, presenting the very funny comedy "Bringing up Father" and 8 vaudeville acts. Tom Marks appears as "Jiggs" and Gracie Marks as "Maggie". Prices 35c and 50c. Seats on sale at McArthur's bookstore.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

—It is not always safe to fire snowballs that are not made by one's own hand. A boy did that on Tuesday and smashed a plate glass window in Baluchy. Laidlaw and Co's. The snowball was made by another boy, and included in its make up a good sized stone. The thrower not knowing the deadly composition of the borrowed ammunition aimed at his own brother. The missile fortunately went wide of its mark, but caused an expensive piece of wreckage.

The AUTOMOBILE

How To Get Hot Spark For Engine

"A good hot spark decides the difference between a good motor and a poor one," says an expert. "Many a motor has been condemned because of sluggish action, weak power, lack of flexibility and other faults, and the reason laid to fault; design, whereas the trouble was due to a weak spark and the owner did not know it.

"The reason for this is obvious. If the spark is not hot enough the explosion loses a great deal of its snappiness and the power suffers in consequence. Other things being equal, the power depends directly upon the heat of the spark. The hotter the spark the stronger the explosion. The other factors referred to are carburetion, lubrication, compression and cooling, these five factors being necessary for the engine to run and develop full power.

"Now it must be explained why a hot spark gives a snappy explosion. If you wish to burn a large mass of rubbish quickly you would set fire to it in several places at once. If you set the fire at only one spot it will burn in all probability, but it will take longer and it might go out. By igniting the pile in several places the whole will be consumed in less time and if the fire goes out in one or two places the other flames will do the work.

"The analogy in the case of the electric spark and the explosive mixture is very close. A weak spark inflames a few particles of gasoline. These few set fires to a few more and the explosion is started slowly. In the case of a hot spark a great many more particles are inflamed at the start. These set fires to a large number, and so the flame advances with greater rapidity through the mass, giving the snappy explosion required.

Test the Battery.

"It follows that the spark must at all times be the best obtainable. As there are many causes of weak spark it will be well to take them up one at a time. First comes the battery. It may be weak, the terminals and wires may not make good contact and there may be defective spots in the installation of the wires. Test the battery with a hydrometer every week. It should read 1.275 to 1.300, called twelve seventy-five and thirteen hundred, the decimal point being neglected in speaking, but not in writing the figures.

"If the battery is below this strength you are using the starter on lights too much or the generator is not charging properly. The terminals should be thoroughly cleaned and set up tightly with a wrench or pliers. Then cup grease or vaseline should be smeared over them to prevent corrosion by the acid in the battery, which has a tendency to creep in between the surfaces and to insulate them with a layer of sulphate. The wires should be examined occasionally and any spots which show chafing should be covered with friction tape.

"The next place is the coil. If the secondary winding is punctured or the condenser leaks, the spark will be too weak for ignition. This may be caused by a defect of manufacture, but is usually caused by a wire dropping off of a spark plug. The ignition current is being produced just the same, and having its regular path interrupted it must jump somewhere. As the spark is strong enough to jump over a quarter of an inch it may find a path inside of the coil. Once it punctures the insulation the spark will not jump the spark plug, since it has a shorter circuit inside. There is no remedy for this condition, as a new coil must be obtained. So make sure that the spark plug wires are properly secured at all times. Also look to the terminals on the coils, as a weak spark will certainly follow if they become loose or dirty.

"The interrupter must also make firm contact or the battery current will not develop its full strength. The contact points must be clean, they must open the right distance and the spring must be strong. Clean the points occasionally by drawing a piece of fine emery cloth through them and make sure that the points open the distance advised by the manufacturer.

Testing For Spark

"The distributer next requires attention. Current may leak through accumulations of dust and oil outside or inside. If outside, the spark may be seen and heard. Sometimes it may be heard jumping inside. Dust should be removed with a soft cloth dipped in gasoline. It does not offer a very good path to the current, but once a spark jumps through it the dust is scorched, forming carbon, which is a good conductor. Distributor brushes worn away, or broken, or loose rotor will also cause trouble. See that all the distributer wires are firmly fastened and that no worn spots exist in the insulation.

"Last, but not least, are the spark plugs. They may give trouble because of carbon, leaky core, spark gap out of adjustment and burned points. A carbonized plug should be cleaned with gasoline, using an old tooth brush. The plug must be taken apart for this, which gives an opportunity to inspect the core. If the porcelain is cracked a new core is needed. The spark gap should be adjusted to approximately one thirty-second inch and the points touched up with emery cloth. Never use emery on the porcelain core, as this roughens it, causing carbon to accumulate more rapidly than before.

"So test the spark occasionally to see if all is well. Remove a spark plug wire while engine in running and hold it not more than one-quarter inch from plug to avoid damage to coil. If a good hot spark is shown at each plug you are reasonably assured of proper ignition."

The King's Bread.

During his recent tour in the North the King very nearly became the victim of the early closing order. An official of his suite visited a local baker's shop after closing hours and asked for bread. The baker's wife refused it, pointing out the reason.

"But it is for the King," said the official, "and there isn't a bit of bread on the train."

"I don't care if it is for the Queen," was the reply. "I dare not serve you."

"But I demand it."

"I am sorry," persisted the woman, "but I must refuse to serve you."

"What can I do?" asked the official.

"You might see the police," was the suggestion.

This was done and the King got his bread, though even so the conscience of the baker's wife still obviously troubled her.

A shooting corn, if wrapped up in an ivy leaf, well soaked in vinegar, will cease from troubling.

Provide labor-saving devices for home and farm so as to insure at least to that extent against the scarcity of hired help thoughout 1918.

THE OLD HOMESTEAD.

In the old house where we grew
From childhood up, the days were dreams,
The summers had unwonted gleams,
The sun a warmer radiance threw
Upon the stair. Alas! is seems
All different in the new!

Our mother still could sing the strain
In earlier days we listened to;
The white threads in her hair were few,
She seldom sighed or suffered pain.
Oh for the old house back again!
It is not so in the new.

Profit in Tree Growing.

"The growing of timber can be made a commercial success," says Dean Baker of the New York State College of Forestry. "In 16 years mine props and fence props can be harvested. In 26 to 36 years timber large enough to produce paper bolts can be grown. It will thus be seen that large corporations which make paper, for instance, can be induced to reforest large areas and thus insure an adequate supply of pulp paper for their future needs. The value of the wood will justify the carrying charges."

HUN BRUTALITY IN EAST AFRICA

CRUEL TREATMENT METED OUT TO ALL CIVILIANS.

Robbed, Starved, Exposed to the Elements, and Subjected to Numerous Indignities.

The story of the treatment of the English and Boer civilian prisoners who were taken in German East Africa is much the same generally as stories that have come from other quarters. It is issued by the British Government as a White Paper.

In German East Africa when war broke out there were a few British missionaries, and a few Englishmen employed on rubber plantations. These were immediately interned by the Germans and were held until about a year ago, when they were released by the arrival of a Belgian force.

The first thing done was to rob all who had any money. In exchange they were given worthless notes, the action of a lawful transaction being therefore preserved. They were taken to two main camps, one at Kilimatindi, and the other at Kiboriana. On arrival at the former the prisoners were met by an English-speaking German, who told them that their time for exercise would be between 4 and 6 in the afternoon. For the remainder of the day they were kept in barracks. The accomodations were of the most primitive description, and men and women were herded together. For a short time they were permitted to keep their servants, but presently these were dismissed and the prisoners had to do all their own work.

Exhibited in Chains.

Their food was coarse and insufficient. The manager of a rubber plantation complained about the food, and was thereupon confined in cells for several days. It was announced that as prisoners the Englishmen had no right to complain, and that a repetition of the offence would be regarded as a revolt.

As other groups of prisoners arrived they told stories about being exhibited in chains before the natives in order that they might be impressed by German power. On one occasion four naval prisoners were brought in, and someone shouted, "Are we downhearted?" The governor immediately fastened upon the late Rev. Father Fiszan and he was imprisoned in a small vermin-infested cell. At this the prisoner who had raised the cry went to the commandant and confessed. No change was made, and for a week the father kept his cell. On the second day he asked for water. It was refused, and he was obliged to drink the water he had used for washing.

Inhuman Treatment.

A Major Howard, D.S.O., escaped, and when brought back with a broken rib and a pierced kidney was confined in a cell six by three feet. For five months he was kept in this cell, being allowed out for half an hour on one day a week.

All prisoners were required to salute and stand at attention on the approach of a guard. One man who failed to take off his hat was confined to his cell for a week.

One of the most revolting sights they were compelled to witness was the almost daily flogging of native servants. They were brutally beaten for the slightest offence.

At Kiboriana, the prisoners were required to take their meals in an open shed, which was always drenched with the cold mists. There were no separate sanitary arrangements for the women. The weather was very bad, cold and wet alternating with days of deadly heat. The prisoners were not provided with proper head covering, and there were many cases of prostration. The two hours' daily exercise was compulsory. The women had to walk steadily the whole period, and the native soldiers hustled them up if they attempted to sit down.

Numerous Indignities.

One of the men was sent to the punishment cell for five days because he admonished a native trooper whom he found swearing at a woman. The prisoners were allowed no news, nor were they permitted to write or receive letters.

At Tobora the indignities heaped on the prisoners were numerous, and were evidently designed with a view of degrading the English in the eyes of the natives. They were sent under native guards to carry raw ox hides from the camp to a cattle kraal some miles away. There they scraped and buried them. Later on they dug them up, scraped them again and carried them back. Pains were taken to see that their labor was performed in the presence of natives, who seemed to be much pleased at the unusual spectacle.

For the slightest breach of the rigid discipline prisoners were put in the punishment cells. There was no trial. The mere charge of a native guard would be sufficient for the German commandant. The women were scandalously treated, but no details are given on this point, which may form the subject of a special report later on.

HOW TROUT CHANGES COLOR.

Action of the Light Rays on the Skin Pigment.

Anglers are familiar with the fact that trout change color, chameleon-like, in conformity with the character of the bottom over which they exist. If the fish frequents a part of a stream where the water flows over white sand, it becomes nearly white; the reverse is true if it frequents a part where the bottom is of dark clay or moss.

A fervent follower of Izaak Walton who had long been curious to learn how rapidly this transformation takes place, captured a small trout last summer and placed it in a white porcelain tray through which he caused a stream of clear water to flow. In a few days the fish began to grow lighter in color, and before the week ended was a very light yellow, with stripes and spots only slightly darker.

His next experiment was to place a thin sheet of hard, black rubber on the bottom of the tray. In less than a week the trout had become a dark slate, nearly black, with the markings almost indistinguishable.

In his third experiment he changed the fish to a dark olive green merely by covering the bottom of the tray with moss. This change took place more rapidly than had the others, owing, doubtless, to the fact that the fish was already dark.

The fisherman then restored the tray to its original color—white—and permitted the trout to fade to a lemon yellow. He then sprinkled a layer of brick dust over the bottom, and the fish very promptly turned to a decidedly reddish hue. His last experiment was to cover the bottom with mica sand, which wrought the most rapid change: in three days the fish became a light straw color.

To determine the cause for this color variation, the angler repeated the entire series of experiments in a darkened room. Here it required three times as long for the various changes to take place—a difference that seems to indicate that the changes are produced by the action of the light rays on the skin pigment, and not by any conscious effort upon the part of the trout.

PRECIOUS BULLETS.

Silver and Gold and Even Precious Stones Have Been Used.

The news that a silver bullet has been recovered from the leg of a Frenchman near Verdun recalls the days when thousands of Sardinians and Austrians were sent to their death by similar missiles fashioned from the altar-silver taken by Napoleon's soldiers from Italian churches.

Bullets of solid gold, too, have even been used with deadly effect. It is said that thousands of lives have been taken by them in the Mexican wars, and the favorite bullet of the Kashmir warrior was for long a garnet, enclosed in lead, which he regarded as a certain messenger of death!

There are, indeed, few materials from which bullets have not been fashioned, from iron and aluminium to copper and brass. They have been steeped in deadly poisons, filled with explosives and acids, and have been made heavy with mercury. In the Crimea many a soldier, when his bullet pouch was empty, fired his ramrod as a parting salute to the enemy; and in the Peninsular War one of our most gallant colonels was found dead with a silver pencil-case embedded in his heart.

Food Control Corner

Canadians who are willing to follow the Food Controller in order to help to save urgently-needed wheat flour, beef and bacon for the soldiers, will find a considerable number of wholesome substitutes.

To save wheat flour, barley may be used for soup and barley flour for thickening; cornmeal for bread and cereal; oatmeal for cereal and oat muffins. Potatoes may be used in a variety of appetizing dishes, and when they are served bread may sometimes be omitted from the meal. At present the price of cornmeal is high, but the new crop in the United States is very large and will be coming on the market soon. The question of price has to be carefully considered by the great majority of people, but those who can afford to do so should substitute in part other cereals for wheat even if the price of the substitutes should be higher.

For meat, fish is a peculiarly suitable substitute because of the variety available and the abundant sources of supply in the Dominion. Beans have nearly the same food values as meat. By a careful selection of other foods the consumption of meat may be very considerably reduced, especially by persons who are not engaged in heavy manual work.

And remember, the primary reason for urging saving of wheat flour, beef and bacon is not economy in cost, but that the soldiers may be supplied with he food which they need.

CANADIAN WOOD IN FRANCE.

From the Report of the Dominion Royal Commission.

"Very little Canadian wood is sold on the French market because it is almost unknown, and, what is worse, in the few places where it is known it has the reputation of being of very inferior quality. This seems hard to believe, but it is only the strict truth. It can be explained by the fact that the Canadian lumber exported has been sent almost exclusively to Great Britain and when, from time to time, it was sent from that country to France, it lost its name and passed as the product of other countries. This was the case with our fine woods that brought high prices. It must be admitted, however, that certain shipments of Canadian wood of a most inferior quality were unloaded on the French market at low prices because they could not be disposed of elsewhere. Such proceedings have caused incalculable harm to the reputation of our products. Unfortunately, our exports of high quality lumber have not been able to counteract this undesirable reputation, since they have always been credited to other countries. At Contras, near Bordeaux, the following sign is displayed on a large lumber factory: "Bois le l'Amerique du Nord" (North American Wood). It is evident that in France, Canada does not exist as a separate country, only "American" products are known.

British Food Economy.

Sir Arthur Yapp, Food Economy Supervisor for Britain, appeals to the British people to observe the following food rules:

Economize in the use of all cereals.

Don't serve bread at mid-day meals unless it is especially asked for.

No one should have more than one egg at a meal; to have more is unfair to other people.

There is tremendous need of economy in butter.

Butter and jam should not be eaten together.

Give up the early morning cup of tea.

Don't make tea too strong.

Economize sugar by dispensing with the open bowl from which supplies can be drawn unchecked.

Have only one fresh meat meal a day. It would be a great help if the voluntary rationed amount were served at table. The meat position may become serious unless economy is exercised.

And do not forget to have a weekly potato day, without bread.

The man who says he loves his home won't bank it up with horse manure to keep out frost,—if he means what he says.

From The Middle West

BETWEEN ONTARIO AND BRITISH COLUMBIA.

Items From Provinces Where Many Ontario Boys and Girls Are Living.

The Saskatchewan Legislature has been called to meet November 16.

Every street car line in Calgary is being operated with one-man cars.

By tagging the public Calgary realized $3,700 for the British Red Cross.

Southern Alberta has been divided into 13 districts for a Victory Loan campaign.

Southern Alberta furnishes most timothy seed than any other part of the Canadian west.

Out of 2,895 registrations in Calgary 467 were reports for service and 2,428 claim exemption.

Dr. Robert Collison, for 20 years medical practitioner in Edmonton, died recently, aged 73 years.

The thirty-first annual Congress of the Salvation Army of Western Canada is now being held in Edmonton.

402 men were examined in one week in Winnipeg and out of these only 13 were judged absolutely unfit for service.

Only one man in eight is willing to enlist in Winnipeg to date. Out of 6,129 who have reported 5,300 claim exemption.

Conrad P. Watson, Saskatoon, was arrested in an Edmonton Hotel, where he had a trunk filled with bottles of whiskey for which he was getting from between $5 and $6 a bottle. He was fined $100 and costs.

Burglars took $760 worth of goods from stores at Qu'Appelle, Indian Head and Grenfell, Sask., in a three nights' raid. No trace of the thieves has been found.

The 78th Battery, who expected to remain in Lethbridge, Alta., while in training, have been moved to Calgary.

Edmonton has only had three conscientious objectors to active service to date.

THE HAND-SHAKE.

How Men Came to Shake Hands to Show Friendship.

In the days of very long ago, when all men were prepared to fight at any and all times because one could not know whether another approaching was a friend or an enemy, all men went armed. This was before the day of guns when the sword was the great weapon of defense.

Upon occasion, when one man approached another, each had to decide whether the other came on a peaceful mission or not.

People in those days were mostly righthanded, as they are now, and when fighting carried their swords in their right hands.

If, then, a man wished to speak with a stranger, or, as might easily be necessary, to one who may even be known to be unfriendly, he put out his right hand upon approaching to show that he had no deadly or dangerous weapon in it, says the "Book of Wonders." The other man could see this, and knew from the extended open hand that no harm was intended and that the approach was peaceful.

If, then, he was willing to meet the other, he also extended his right arm with the hand open, to show him who was approaching that his fighting hand was empty also, and when they met each would grasp the hand of the other, so that neither one could change his mind and assume a fighting attitude without the other having an equal warning.

Long Life for the Clothes Wringer.

When the lower rubber of the clothes wringer wears out, as it usually does, before the upper one, strip the rubber off. Take a piece of heavy white duck, cut it the same width as the wringer, wet it, then turn the wringer, letting the material run on evenly until it is the same thickness as the upper rubber. Fasten the duck with a few stitches. You will find that renewed this way the wringer works quite the same and will last for a long time.

The Doings of the Duffs.

The Real "War Bread" must contain the entire wheat grain—not the white flour center — but every particle of gluten and mineral salts—also the outer bran coat that is so useful in keeping the bowels healthy and active. **Shredded Wheat Biscuit** is the real "war bread" because it is 100 per cent. whole wheat prepared in a digestible form. Contains no yeast, baking powder, seasoning, or chemicals of any kind. Food conservation begins with Shredded Wheat Biscuit for breakfast and ends with Shredded Wheat Biscuit for supper. Delicious with sliced bananas, berries, or other fruits.
Made in Canada.

A MARTYR TO THE CAUSE.

Mexican Ants That Carry Little Green Umbrellas.

In Mexico there is a variety of ants that carry little green umbrellas, made from bits of leaves, to protect their bodies from the fierce tropical sun. Sometimes, writes a contributor who has lived in the turbulent republic across the Rio Grande, I have seen two ants walking together while one politely carried the umbrella over the two. At other times, she says, I have seen them, when going in opposite directions, stop and salute each other before they passed on.

Those wonderful little insects live in immense underground houses with many rooms connected by long passages. I have poured as much as ten gallons of poisoned water into one hole without filling it. In some of the rooms the ants store their food; in others, lined with particles of leaves that have been used for umbrellas, they place the pupa cases or white bags of eggs.

Some of the ants seem to have special duties as nurses, and on any fine day you may see them bringing the little white pupæ up to the surface and laying them round the top of the hole in the sunshine. When a shower approaches, they run at top speed to get their charges and carry them under shelter before the rain begins to fall.

In many places in Mexico and in western Texas these ants are very destructive; they eat the leaves of the trees and destroy ornamental shrubs and plants. Once I made the experiment of putting sticky tar round my trees to protect them, and stood aside to see what would happen. Here came the orderly column down the tree; each soldier was carrying his green umbrella. When the leader reached the band of tar a sudden confusion arose. The ants gathered in groups, larger or smaller, separated and grouped again and again.

About that time the upgoing line reached the lower edge of the tar, and it went through a similar performance. Some went back to the hole at the foot of the tree, and others that apparently were inspectors came out and walked round the tar band, examining it at every point.

Finally I grew tired of watching them, and, feeling satisfied with my victory, I went into the house. But alas! what was my chagrin when I returned about sunset to revel in my conquest to see the ants with their green umbrellas calmly passing up and down the tree as industriously as ever.

Upon examination I found that the leader had laid down his leaf on the tar, then had walked out on that as far as he could, had caught his feet and remained; the next had followed, and ruthlessly had used the leaf and body of the poor martyr as a footing to lay down his own load. Many had followed his example, until with leaves and mangled bodies they had constructed a pons formicarum entirely across my mighty barricade.

BRAVE TELEPHONE GIRLS.

"Carried On" During Air Raid as the Hun Bombs Fell.

Scenes of bravery among the girls of a London telephone exchange during the recent air raid are vividly described in "Telegraph and Telephone Review" by Mr. J. W. Kennedy, who was present. He says:

Bombs actually dropping in the immediate vicinity, while the presence of airmen over and on both sides of the building was reported, and while the smoke from exploded bombs was distinctly seen from the windows, and through it all, the supervisor nearest to me hovered over her section like a strong spirit seeking to help those under her charge.

I can paint no picture of stoical insensibility. Some nervous cries there were as the bombs dropped, white faces were the rule, but in many of these the lines of determination were the strongest. Silent tears were dropped, but only for a moment. No one near me left her post, and calls were passing and cords connected with the music of death in our ears.

So near and insistent was the horrible thud of the bombs that most of us thought that some part of the building had been struck. It seemed to us that the rattle of guns continued longer than even during Zeppelin raids. Some day it may add some value to our lives to know that there were times when, for duty's sake, we faced the chances of death. It must add infinitely more to the lives of women, whose finer nervous and physical organization makes them feel more acutely.

FIFTEEN YEARS USE OF BABY'S OWN TABLETS

Thousands of mothers keep a box of Baby's Own Tablets in the house as long as there are little ones about. Among them is Mrs. Marcel D. LeBlanc, Memramcook West, N.B., who says:—"For the past fifteen years I have never been without Baby's Own Tablets. Whenever any of my children are ailing the Tablets promptly relieve them. I have such faith in them that I never hesitate in recommending them to any of my friends who have little ones in the home." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

Let blue Monday be full of the blue of the sky which one gets by looking up.

Minard's Liniment Co., Limited.

Gentlemen,—In July, 1915, I was thrown from a road machine, injuring my hip and back badly and was obliged to use a crutch for 14 months. In September, 1916, Mr. Wm. Outridge of Larkspur urged me to try MINARD'S LINIMENT, which I did with the most satisfactory results and today I am as well as ever in my life.

Yours sincerely,
his

MAKING TRENCH TORCHES.

Ingenious Invention of a New York Woman.

In these days of wartime activities and self-sacrifice; intensive retrenchments, intensive production, intensive training, it will surprise no one to learn that a New York woman has turned the parlor of her home into a factory where small but willing hands produce the trench torch—otherwise called le petit flambeau. The torch itself, one of America's latest and most ingenious contributions to the war, is the surprise.

Like many another useful invention, it is simplicity itself—strips of newspaper rolled on a small cylindrical mould of wood, the mould being removed after the roll is tied with a single turn of common cord and before it has been dipped in paraffin. The finished product, a sturdy little tube three inches long by about an inch in diameter, gives a six candle-power light for forty-five minutes at the—in this day—amazing cost of one-third of a cent.

Add to this trivial cost a singular adaptability to conditions now prevailing in the zone of trench warfare, and surgeon and soldier have good reason to rejoice. The torch is waterproof, an important item; it is easily carried in pocket or pouch by the dozen, if necessary; it is all but indestructible; it burns with a clear, bright flame and is non-explosive. All these points recommend it to the surgeon in the field or the soldier in the trench or dugout. Apparently the trench torch has come to stay. Its practical utility is indicated in Mrs. Gushee's own statement that the torch makes it possible to light thirty soldiers forty-five minutes for ten cents, or as long as it takes to read a short story or play a game of cards. And this does not take into account the more serious phase when a surgeon bends over a stricken man and dresses his wounds by the flaming light of a little slug of paraffine soaked waste paper.

The simple idea of a woman eager to serve! Only that. Yet who knows how many weary hours may be lifted out of tedium into something approaching coziness and comfort, how many wounds may be stanched in time by those little dabs of light?

"Tea and Coffee Interfere with Digestion"—

says a well known authority.

Many who use tea or coffee, not knowing that it aggravates stomach troubles, couldstill enjoy a delicious hot table beverage and escape harmful effects by a change to the wholesome, pure cereal drink—

POSTUM

"There's a Reason"

STUDY AND EXERCISE

Overstudy and lack of exercise make thin bloodless children. Study does not usually hurt a child at school unless the studies encroach on time that should be spent in out-of-doors exercise. But lack of exercise and overstudy is a combination that brings on St. Vitus Dance. If your boy or girl at school is thin and pale, listless and inattentive, has a fickle appetite, is unable to stand still or sit still, you must remember that health is much more important than education, and more time should be given to exercise and recreation.

See to it at once that the child does not overstudy, gets plenty of out-of-door exercise, sleeps ten out of every twenty-four hours, and takes a safe, reliable tonic like Dr. Williams Pink Pills until the color returns to the cheeks and lips and the appetite becomes normal. For growing children who become pale and thin Dr. Williams Pink Pills are not only safe but in most cases are the very best tonic that can be taken. These pills build up the blood, strengthen the nerves and assist nature in keeping pace with rapid growth.

You can get Dr. Williams Pink Pills through any dealer in medicine, or by mail postpaid at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

Oldest British Colony.

Newfoundland is the oldest English colony, having just celebrated her 420th anniversary. It was discovered by John Cabot, a Bristol merchant, in his voyage of exploration in 1497; and in 1583 was occupied by Sir Humphry Gilbert, the navigator and soldier, in the name of Queen Elizabeth. The island has raised over 10,000 men for the war, and gallant and hardy fighters those agriculturists, foresters, lumbermen, and fishermen have proved themselves to be in Gallipoli and in France.

GIRLS! WHITEN SKIN WITH LEMON JUICE

Make a beauty lotion for a few cents to remove tan, freckles, sallowness.

Your grocer has the lemons and any drug store or toilet counter will supply you with three ounces of orchard white for a few cents. Squeeze the juice of two fresh lemons into a bottle, then put in the orchard white and shake well. This makes a quarter pint of the very best lemon skin whitener and complexion beautifier known. Massage this fragrant, creamy lotion daily into the face, neck, arms and hands and just see how freckles, tan, sallowness, redness and roughness disappear and how smooth, soft and clear the skin becomes. Yes! it is harmless, and the beautiful results will surprise you.

A Constipation Cure

A druggist says: "For nearly thirty years I have commended the Extract of Roots, known as Mother Seigel's Curative Syrup, for the radical cure of constipation and indigestion. It is an old reliable remedy that never fails to do the work." 30 drops thrice daily. Get the Genuine, at druggists.

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your foot here after; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

Raw Eggs Outkeep Boiled.
Raw eggs keep good much longer than cooked eggs, even when these are hard boiled. This was proved by Dr. Leon Lindet, a member of the Paris Conseil d'Hygiene, after many French soldiers had reported that the hard boiled eggs they received from home had gone bad, while the raw eggs remained edible for weeks. Dr. Lindet explains this fact by saying that the boiling makes the inner membrane pervious to gases, liquids and microbes, and the white of the egg becomes an agglomeration of coagulated albumen and particles of a serum that is an ideal medium in which microbes thrive.

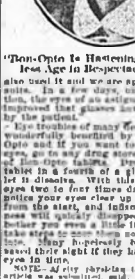
BROKEN DOWN IN HEALTH
Woman Tells How $5 Worth of Pinkham's Compound Made Her Well.

Lima, Ohio.—"I was all broken down in health from a displacement. One of my lady friends came to see me and she advised me to commence taking Lydia E. Pinkham's Vegetable Compound and to use Lydia E. Pinkham's Sanative Wash. I began taking your remedies and took $5.00 worth and in two months was a well woman after three doctors said I never would stand up straight again. I was a mid-wife for seven years and I recommended the Vegetable Compound to every woman to take before birth and afterwards, and they all got along so nicely that it rarely is a godsend to suffering women. If women wish to write to me I will be delighted to answer them."—Mrs. JENNIE MOYER, 342 E. North St., Lima, Ohio.

Women who suffer from displacements, weakness, irregularities, nervousness, backache, or bearing-down pains, need the tonic properties of the roots and herbs contained in Lydia E. Pinkham's Vegetable Compound.



Doctors Tell Why They Prescribe Bon-Opto. Explain How It Strengthens Eyesight Remarkably In a Week's Time In Many Instances.

Dr. R. A. an eye specialist of nearly twenty years practice, says: "Bon-opto is a remarkable eye remedy. In connection with the eyes of an astigmatic man who was improved that glasses have been discarded by the patient.

Eye troubles of many descriptions may be wonderfully benefited by the use of Bon-opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-opto tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up and your sight from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

NOTE—After speaking to whom the above article was submitted, said: "Yes, Bon-opto is a remarkable eye remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients who were near sighted through overwork or mild glasses. I can highly recommend it in cases of eyestrain, watering, smarting, itching, burning eyes, and lids, blurred vision or letters dancing from exposure to smoke, eye, sun or wind. It is one of the very few reliable eyestrain relievers that I would be glad to have for general use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is on physician's prescription, the formula being printed on the package and the manufacturers guarantee it to absolutely relieve any case of eyestrain, no matter of how long standing, or refund the money. It is distributed in all good druggists, including general stores; also by G. Tamblyn and J. Eaton & Co., Toronto.

"Bon-Opto is Hastening the Eyeglass-less Age in Respectacled Boston."

Has Seen Eyesight Improve from 75 To 100% in a Remarkably Short Time.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and many who once wore glasses say they have thrown them away. One man says after using Bon-Opto: "I was almost blind. Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At times they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eyestrain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the flittering leaves on the trees across the street now, which for several years have looked like a dim green line to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

The Paisley Advocate

PAISLEY, NOV. 21st, 1917

TRUAX AND McNAB IN SOUTH BRUCE

The official nominations for the Dominion elections were held on Monday, and during the next month the electors will have time to decide for whom they will mark their ballots. Voting is on Dec 17th.

In South Bruce the fight will be between Mr R E Truax, straight Laurier supporter, and A R McNab, a win-the-war Liberal and supporter of the proposed Union Government. Mr Beechler, of Kinloss, who had loomed up as an independent candidate, decided not to put in his nomination papers.

In his address at the nomination Mr Truax stated he will support any government on war measures, including conscription up to 100,000 men. After that the people should be consulted. Mr McNab, of course, comes before the electors as an out-and-out win-the-war man who would not favor delay of Canadian operations at any time for a referendum

—The ladies of Paisley and the surrounding country are kindly asked to keep, until further notice, all discarded gold and silver jewellery, old silver thimbles, cuff links, coins, etc, for Y. M. C. A. work at the battle front. Under the auspices of the Women's Christian Temperance Union.

Former Paisley Boy Gassed

Gnr. Lawson Hargreaves, son of Mr and Mrs John Hargreaves of Toronto, is among the recent casualties, having been gassed. He has been in France for over two years.

Double Memorial Services

A memorial service in honor of the late Sergt Emerson Pearce and Corp. John Hamilton will be held in Knox church on Sunday evening. The C O F will attend in a body. Members will meet at the Oddfellows' Hall at 6.30 and march to the church.

An Intelligent Bomb

Dr Robertson, of Venice, in an article in The Scotsman, narrates that an Austrian aviator dropped a bomb right onto the centre of the huge roof of the Palazzo de Mule, and although unfortunately, to do its work it had to pass through three floors of the palace, wrecking everything on its way, yet it did the deed, and did it well. To the delight of the Venetians, after smashing a marble slab on which were recorded William's visits to the palace, it singled out his pretentious portrait and tore it to shreds. Having fulfilled its mission, the bomb emptied itself of a noxious gas and fluid.

Fell into a Cellar

Dr Black, of Clifford met with an accident which might have been more serious than it did, says the Express. About midnight on Nov 9th, he started from his home over to a neighboring pump to get a pail of water. The night was dark and foggy, and having no light he missed his way and diverted into the debris of the foundation of an old tornadown building, where a new house is to be built. He fell into the old cellar, and was so stunned that he could not get out until his son Leslie, noticing that his father was long in getting back with the water went in search. The doctor was in Paisley on Friday last, still bearing upon the crown of his head the marks of the severe injuries sustained in his fall.

Bruce in Khaki

The 160th Boys at Witley Camp have a weekly newspaper all their own, printed in pamphlet form, 16 pages, with engraved heading "Bruce in Khaki.—Save, Serve and Smile". The editorials are well written, the news columns full of interesting items, and the miscellany full of humor. In the sporting column we note that the 160th was well represented at the Aldershot command efficiency competitions, having won the bath wite, rifle grenade, physical training, stretcher bearer and revolver events from the brigade. The first item among the musical notes says that Sergt W Jack (band leader) has been enjoying a well-earned leave with friends in Scotland. In a report of the 100 mile bike taken by the brigade the band is given great credit, as it is "the only one that can get the right time in the right place". We hope to have a copy of each issue of "Bruce in Khaki" left on our table.

Corp. Wm. Anstead Dies

Mr and Mrs W C Anstead, of Goldie St, received the sad news on Tuesday evening that their son, Corp Wm A Anstead, had succumbed to his illness of appendicitis. The deceased enlisted with the 160th Bruce Battalion, but after reaching England transferred to the transport service and went to France. Last spring he was taken ill and was sent to an hospital in England. Upon his recovery he returned to France. About two weeks ago his parents received a cable stating that he was seriously ill at No 6 Clearing Station in France. He was 28 years of age, and was married four years ago to Miss Annie Agnew of Peabody, in Sullivan Tp. A memorial service will be held in Peabody church on Sunday next. The deceased had been away from Paisley for a number of years. He was a steady, industrious young man and prior to the war had been farming in Sullivan Tp. The parents and family and the soldier's widow will have the sympathy of all in their bereavement.

Fine Herd of Shorthorns Sold

Mr J D McArthur, who recently disposed of his farm, lot 32, con 1 Saugeen had a very successful auction sale of his thoroughbred and grade stock, implements, etc. The sale had been widely advertised, as there was a large number of bidders from the surrounding country as well as some from distant counties, after the choice breeding stock. Noah Strowbridge, of Galt, was the purchaser of a roan cow at $285; Reeve Christie, of Saugeen, paid $230; for a red heifer, 2 yrs old. Other cows fetched from $185 to $225; H Rudolph, Klein Rd north got the stock bull, 4 yrs old, at $230. Bull calves ranging from one to eleven months old sold from $75 to $160. Among the other buyers were A Cormack, Jas Cameron, Wm Bernhatsher, John McCurdy of Elderslie; J McArthur, Wm Airth, John A Cumming of Bruce Tp; R Gowanlock, Josiah Bell, Rich Webb, O A Klager, L Brown, J Brown. Seven calves were bought by J A Howe at $50 each. Mr McArthur has bought a home in Port Elgin and removed to that town last week.

AUTOINTOXICATION OR SELF-POISONING

The Dangerous Condition Which Produces Many Well Known Diseases.

HOW TO GUARD AGAINST THIS TROUBLE

"FRUIT-A-TIVES" — The Wonderful Fruit Medicine — will Protect You

Autointoxication means self-poisoning, caused by continuous or partial constipation, or insufficient action of the bowels.

Instead of the refuse matter passing daily from the body, it is absorbed by the blood. As a result, *the Kidneys and Skin are overworked*, in their efforts to rid the blood of this poisoning.

Poisoning of the blood in this way often causes Indigestion, Loss of Appetite and Disturbed Stomach. It may produce Headaches and Sleeplessness. *It may irritate the Kidneys* and bring on Pain in the Back, Rheumatism, Gout, and Rheumatic Pains. It is the chief cause of Eczema—and *keeps the whole system unhealthy* by the constant absorption into the blood of this refuse matter.

"*Fruit-a-tives*" *will always cure Autointoxication* or self-poisoning — as "Fruit-a-tives" acts gently on bowels, kidneys and skin, strengthens the bowels and tones up the nervous system.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

LIBERALS NOT ASKED TO ABANDON PRINCIPLES

Woodstock Sentinel-Review (Lib.)

It is not necessary to claim for the new Union Government that it is an ideal Government or that it is the best of all possible Governments; but it is the best available Government for the one great task which now confronts the country, namely, for ensuring the vigorous prosecution of the war and Canada's continued participation in it.

Nor is it necessary for any man to abandon any political principle in joining the Government. The Liberal is not deserting Liberalism. He is simply asserting his patriotism and declaring by his actions his belief that his first duty is to his country, a declaration which everyone is prepared to make with his lips.

In accepting the leadership of Sir Robert Borden for the one purpose of ensuring the prosecution of a vigorous war policy one does not commit himself to anything else in Sir Robert's political programme. A good many of the people strongly supporting Lloyd George as a war leader have no sympathy with the teachings or methods associated with his pre-war days. The Republicans in the United States who are backing up President Wilson so loyally have no idea that they are abandoning any of their Republican principles in doing so. They are simply placing their duty to the United States before their duty to the Republican party.

Neither Mr Rowell nor any other Liberal who is giving his support to the new Union Government has any need to apologize. So the people may misunderstand them and impute improper motives to them; that must be expected by every man who has the courage to do his duty under trying circumstances; but history will do them justice.

Playmate of Late King

Mr Charles Symon, a pioneer of Greenock township and a playmate of the late King Edward, died at his home in Walkerton on Sunday evening last after only a few days' illness aged 78 years and 6 months. The deceased was born in Balmoral, Scotland, near Queen Victoria's Castle, was a favorite of the late Queen and a boyhood chum of her eldest son, King Edward VII. Migrating to Canada at 19 years of age he settled first at Elgin, and about 2½ years later came to Greenock and located near Riversdale where about 50 years ago he was married to Miss Anne Howe of that village. The country at that time was largely a wilderness, infested by wild animals, a fact that was sorrowfully impressed upon the young couple, when a bear carried off and killed their 3 yr old son who had accompanied Mrs Symon to the bush. The late Mr Symon was a widely-read, well informed man, and was highly regarded in the township. After farming for over forty years he retired about eleven years ago to Walkerton, where he has since resided.—Herald and Times.

—Excessive business gains by the William Davies Company is confirmed by the Henderson report, which it is understood will show 80 per cent made by that firm in 1916, on the basis of all the money working in the business. This totals something like $1,600,000 of gain. The Government now purposes to deal with the packing houses quite drastically, and prevent millionaire making at such a splendid rate. No packing house is to be entitled to more than two per cent on its turnover, or more than 15 per cent on his profits. Between seven and fifteen per cent the Government takes half.

BORN

BOYD—At Tilbury, on Nov 8th to Dr and Mrs C K Boyd, of Paisley, a son.

MARRIED

McLEAN—FERAY—At the Baptist Manse, Paisley, on Nov 13th, by Rev M Neilson, Mr Donald McLean, of Paisley, to Mrs Florence Perry, of Chesley.

DIED

McDONALD—In Elderslie, on Nov 7th, Mrs A D McDonald, aged 78 years.

FIRST STEAMBOATS ON THE GREAT LAKES

Launched in Lake Ontario 1817, When Railroads were Unknown—Heralded Far and Wide

Frank H. Russel writes: The first steamboats on any of the lakes came out in 1817 on Lake Ontario; one under the British flag called the Frontenac and one under the American called the Ontario. Both were built at the eastern end of the lake, the Frontenac at Finkle's Point, 18 miles up the bay of Quinte from Kingston, Canada, and the Ontario at Sackett's Harbor.

Steamboats with Sails

The first steamboats were equipped with sails, the steering wheel being placed on the stern as in sailing vessels. Both steamers were no doubt able to handle themselves under sail to a large extent. The Frontenac ran regularly until 1827, when she was burned in Niagara river. The Ontario, much smaller and of lighter draft, plied between Lewiston on the Niagara river and Ogdensburg, 70 miles down the Saint Lawrence river from the foot of Lake Ontario. The speed of the Ontario is given as about seven miles an hour.

Great Rejoicing

Of course, the opening of the service of these pioneer steamers was heralded far and wide, and in every port of call they were met by crowds of curious and excited people, and, as one writer says, were greeted by ringing of church bells and firing of cannon. The era of startling inventions was just beginning. There had been no particular change for centuries in the way in which men had traveled by land or by sea. The railroad and the telegraph were unknown and in the sparsely settled country about Lake Ontario, long journeys were made on foot, on horseback or behind plodding ox teams, and those who journeyed by water found passage in small sloops or schooners or in boats propelled by oars or paddles. We who live in these days of time and space annihilating inventions touching our daily life on every hand, can have no idea of the wonder and awe inspired in the little lake settlements by the actual coming into port of these first lake steamers.

MOUNTAINS OF BAGGAGE

Nearly Eight Million Pieces Handled by One Road in a Year

No department of a big railway requires more care or thought than the handling of baggage. The amount of baggage handled on so large a system as the C.P.R. is phenomenal—no less than 7,580,652 individual pieces being forwarded during the last business year. There must have been quite a number of families on the move, for the list includes 28,309 baby carriages. Milk cans form an important element in the work of the baggage department, as in order to ensure the rapid delivery of milk from the farm to the city dweller passenger trains are used. The total number of milk cans forwarded during the past year was 1,162,472. The most convincing proof of the care with which baggage is handled is given in the figures of claims paid on loss, damage, pilferage. Out of nearly eight million pieces of baggage handled, the amount paid on loss was only $1,791.79; on damage only $1,669.03; and on pilferage only $173.07, or the cost to the company in these respects being only five cents per hundred parcels. This is a record of which Mr. J. O. Appe, the general baggage agent of the Canadian Pacific Railway, may well be proud, and is sufficient to show that the so-called "baggage smasher" has been entirely eliminated, if indeed he ever existed, between Digby, N.S., and Victoria, B.C.

GAVE AUSTRALIA WEALTH

First Flock of Sheep Consisted of Eight Animals

Australian wool, on which has been built up much of that British colony's prosperity, started more than 100 years ago. It originated with a captain Captain McArthur, a soldier in the British army. Settling in New South Wales, soon after Governor Phillip arrived there, he saw the possibilities for growing fine wool, and by the luckiest accident was able, in 1796, to import from America ewes, and three rams. They were of a flock presented by the King of Spain to the Dutch at the Cape and came from the famous Escurial Stock. These, judiciously added to by McArthur, were the beginning of the vast Australian sheep industry of to-day. The first shipment of Australian wool was 245 pounds, in 1807, now the shipments run into hundreds of millions of pounds.

Tobacco from Seeds

A member of one of Sir Ernest Shackleton's expedition writes:—Before we left the ice our tobacco had given out, but the most determined smokers amongst us were not going to be thwarted. We made shift with the grass rising of our "fuhnesoes" (boots). It tasted generally of kerosene, and was pretty hot stuff to a pipe. The non-smokers strongly objected to it at close quarters.

World's Rubber Productions

Reports covering the world's total production of crude rubber indicate that the past year's output amounted to 178,000 tons. The great rubber plantations of the east now produce about 75 per cent. of the total and promise to show a decided increase. One million four hundred and twelve thousand acres are known to be under cultivation.

Frederick Rose, a postman, who died at Thorpe-le-Soken, Essex, England, had walked the equivalent of seven and a half times round the earth.

Pieces of broken bottles, a tin opener, egg shells, and a broken egg cup were found inside a new baloonfish to Edmonton, Eng., guardians.

Three thousand women are employed at the pit-heads of the Lothians collieries.

BALLACHEY, LAIDLAW & CO.

The Store with the Stock

Special Mention

Boys' Sweaters

We have secured a quantity of Boys' Sweaters, in red and navy, sizes 30 and 32, very extra value, $1.50.

Ladies' Cravenette Coats at $1.00

These can be used either as they are or made over into very useful house dresses or children's dresses.

Rubbers

Our stock of these is simply enormous, and prices are relatively lower than for any other line of footwear.

New Raisins, Currants, Peels, etc.

For Christmas cookery. You need the best, and we have it.

Hand-painted Nippon China

In 36 different shapes, both novel and useful. These are in particularly dainty designs, and are cheap. Prices from 75c to $1.00.

The Canadian Farmer's Real Friend

YOUR letters will be answered, you will get the exact information you need, you will get the advice and assistance you desire free, provided by experts to whom we pay real money for the answer we send you, if you become a subscriber to FARMER'S MAGAZINE. This magazine is for—

The Men on the Farm

Helps them plan, and tells them how to construct barns, stables, sheep pens, hen houses, silos and dwellings.

Tells all about septic tanks, hydraulic rams, water supply and lighting systems, power farming.

Gives advice and information about feeding and breeding and the health of animals; about the business side of farming, co-operative methods, investments and insurance.

The Women on the Farm

Helps them in their home planning and making.

In their kitchen problems.

In matters pertaining to children—their health, rearing and school.

Deals with styles, dress patterns and other feminine interests.

Gives help in gardening and flower culture.

Gives news of women's work.

For all it provides, stories, special articles on timely subjects by experts—not amateurs or experimenters; and the latest and most accurate information on every matter of concern to farmers.

FARMER'S MAGAZINE

has three times as many regular departments as are ordinarily found in farm papers, and is about the most satisfying paper you can get at any price. Subscription $1.00 per year.

EVERY issue of FARMER'S MAGAZINE is worth a dollar bill, because it is downright helpful in practical ways. The free advice and information it supplies on request—by private letter—may be worth many dollars. Have the FARMER'S MAGAZINE in your home as you would a hammer or a saw—an ever ready and indispensable help. Have it for its friendship.

The price is One Dollar per year. Did us send it to you, and remit for it when we send you the bill. Address the publishers:—

The MacLean Publishing Co., Ltd., 153 University Ave., Toronto

TUBERCULOSIS SUNDAY

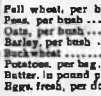
Last year, as in years past, nearly every Clergyman and School Teacher in Ontario helped to spread the Gospel of Good Health on Tuberculosis Sunday and Tuberculosis Day in the Schools.

This year, under the auspices of the National Sanitarium Association, endorsed by the leading Clergymen of all Denominations and by the Department of Education, Sunday, November 18th, and Monday, November 19th, have been appointed for the annual observance of these days.

At no time in the history of the world has the necessity for physical fitness been so great as it is to-day. One has but to scan the reports of rejections for active service abroad to note the many that are unfit. "You have tuberculosis!" has been the pronouncement to thousands of young men in Canada and the United States during the past few months.

A thorough physical examination a year ago might have exposed the weakness and prevented the development of this dread disease; and yet, in spite of such a warning, thousands of men and women will continue to disregard the danger until they too have become victims of Consumption.

If you would avoid this disease, watch your health, avoid needless worry and over-work; see that your food is nourishing and that it is served at regular intervals. Above all—get out in the sunshine every minute you can spare; see that the windows in your place of business and in your home are open so that day and night you may be assured of a plentiful supply of pure, fresh air.



Central Business College Stratford, Ont.

Ontario's Best Commercial School

Courses are thorough, instructors are experienced, students get individual attention, graduates are in demand. During 3 months we turned [illegible] calls for trained help. MAXWELL

We Announce the New Winter Maxwell

The car that makes winter motoring in Canada practical—economical—comfortable.

And motoring, to-day, is an all-the-year-round passenger-transportation NECESSITY.

The Maxwell "all weather top" meets this vital modern transportation need in the most practical way.

The cars are the famous Maxwell touring car and roadster—economical, efficient, durable.

The new thing—the big, progressive thing—is the enclosed top, which gives snappy appearance and closed car comfort at much less than closed car prices.

This is just what you have wanted. Come to our salesrooms and see the cars.

Touring car with all-weather top $1200
Roadster with all-weather top - - $1165

D. A. LYON, Agent, Paisley

HON. FRANK CARVELL

Vigorously Enunciates Some Lines of Policy

"I'm just an ordinary country lawyer living in a small town and trying to make an honest living," was his confession, "but I propose in office to carry out the doctrines I preached in Opposition." Mr. Carvell served notice upon wealth and upon war profiteers.

On the great economic questions of the day, he said, he had not changed his mind one particle. But the war had made such a great difference that the man who did not change his views accordingly was not progressive. "We have got to get through with this war first in the best way we can and we can attend to our economic differences afterwards," said he amid an outburst." We must devote all our energies to war-winning, and after the war is over to the demobilising of the soldiers, but we must see that the soldiers are put in a position after the war so they can win an independent living." (Applause.)

Discussing Canada's financial position briefly, Mr. Carvell said when war broke out the annual revenue of the Dominion was 136 or 140 millions. The ordinary expenditure after the war would be about the same as before. "But, do you realize that if the war closed down to-day we would require as much money to pay the interest on our debt and pay the soldiers' pensions as it took to run the country in 1914? And if the war should run another year—and I fear it will—it is going to cost $160,000,000 additional money for te interest on our debt and our indebtedness to the soldiers, and Canada must not repudiate her debt to the soldiers and therefore she must pay the pensions. (Applause.)

"Men who have seen and had a taste of hell—and I don't think hell can be any worse— and every man who comes back, wounded or disabled, simply be taken care of by the State, and I don't care where the money comes from. (Applause.) I don't care how we retrench in other public services, we simply cannot retrench on the soldiers. (Applause.) The rich man up to the present has contributed comparatively nothing. The poor man has contributed ten times as much as the rich according to his means." (Applause.)

Mr. Carvell said he had preached income tax day in and day out for some years, and while an income tax had been introduced by the Government, it was not nearly so drastic as he would like to see it, and as he hoped to see it in the near future. He intended to press for a more drastic measure, and he thought perhaps his voice would have a little more influence in the future than in the past. They must get at incomes below $3,000, and "as it goes up I hope to see the tax amount much faster than it does at the present time. (Applause.) If this government is returned to power I promise you that so far as I am concerned, the rich man will pay much more than he has done in the past." (Applause.)

But the most enthusiastic and remarkable demonstration of the convention came when Mr. Carvell suddenly straightened up and, wheeling upon the Minister of Militia, who was sitting at his side, exclaimed: "I tell you there are men in my Province, wearing the king's uniform, who never left Canada and who never intend to leave Canada, who are drawing enormous sums from the Government in salaries and separation allowances for which they give no adequate return. Some of these may be necessary, but their places could and should be taken by returned soldiers. (Prolonged cheers.)

"I see that the condition of affairs must be somewhat similar up here. (Renewed and continued cheering.) I intend to furnish General Mewburn with a list of these men from my Province and ask that the change be made."

Letters from the Soldiers

Seeing Wales

Elroy McKenzie, of the despatch riders at Shoreditch Camp, enjoyed a six days' leave which he spent with another member of the corps on a trip to North Wales. On the way they were in London for the evening and went to "His Majesty's" theatre to see "Chu Chin Chow", but the performance was badly "chowed" by Hun air raiders arriving over the city. Many people left their seats in the theatre when the anti-aircraft guns began booming, and went to the corridors for safety. "The bombardment became very intense, and occasionally we could hear bombs drop. Later we saw that no less than 14,000 shells were fired at the enemy aircraft that night by the defence guns. A couple of shell fell very near the theatre but did not explode. However, at last Fritz passed over, and after an hour's delay the play continued again. We did not have time to wait, and left for Paddington station at 11.15. We went by underground, and at every station we passed we saw dozens and dozens of people sleeping on the platforms seeking shelter from the bombs. Most of these appeared to be poor people, and nearly all had little children with them. All the tube stations were crowded Next day we saw in the papers that it was one of the worst raids yet on London. We left Paddington about 12.50 o'clock, arriving at Chester at 3.15 next morning (Sunday) and finding we would have to wait there three hours, we walked down to see what the place was like, and found that we were in luck as it turned out to be a very interesting city to spend a few hours in. We made our way to the Cathedral, which is a very old and very fine one, dating back as far as the 13th century. The architecture represents different styles, from the Normans to the later Gothic. One of the finest things in the Cathedral is the exquisitely beautiful wood carving in the choir, which is very old. After leaving the cathedral we went up to the old city wall which still surrounds part of the present city. We walked almost all the way around, were able to get some very fine views. From Chester we went to Rytl, where there was another wait of an hour for train connections, and we went out to the seafront on the fine promenade. Ryll is quite a nice summer resort, with population of about 25,000. Llandudno, our destination, is a very popular resort, that has a population of about 13,000 in winter and about 30,000 in summer. The city is situated with the sea in front and the mountains on three sides. The Great Orme, a huge hill of solid rock is on the west, and the Little Orme on the east. The beach is a perfect crescent shape and a beautiful promenade extends from one end to the other. Behind are the finest mountains in Wales, and it takes but a 35 minutes' ride on the train or an hour's walk to be in the midst of them. On a walk around the Great Orme (about 5 miles) we got a great view from hundreds of feet above the town. One day we went to Conway by train and there visited that beautifulold ruins, Conway Castle, which is one of the very finest ruins in Great Britain, and is considered to be the most graceful if not the grandest in North Wales. It was completed in 1284 by Edward I. The walls are all embattled and from 12 to 15 feet thick. Unshed by eight vast circular towers 40 ft in diameter. Other historic buildingsvisited were "Plas Mawr," a very interesting old house dating back to the 15th century, which was used as a palace for Queen Elizabeth, and "Aber Conway" another very old house built in 1300. Two or three days were spent in trips on foot and by train to view all the scenery of mountain and pass in the locality, which was truly fascinating to the young Canadians. At Penryn Hall, built in the 15th century they saw a collection of hundreds of antiques and curios. The whole trip was most enjoyable and their stay with the Clark family seemed the most "home-like" time Elroy has spent since going overseas a year ago.

—This is how the Pickering News puts it: "It is rather amusing to hear the pleas of some of the young men who try to explain why they are not in khaki and fighting the battles of the Empire. Their cheeks fill not with pride when they think of their loyalty. But their loyalty consists of not in donning the uniform and going into the battlefield and enduring all the hardships and danger that every true patriot is willing to endure, but in staying at home where everything is peaceful and quiet, and feeding the soldiers. They lay great stress on the duty of every man to do his bit in preventing the soldiers from starving. The tears trickle down their cheeks when they think there may be some poor soldier in France who did not get enough to satisfy his hunger at the supper table, that is if they have to have that luxury, but if we watch very closely we will see that these very men do not work one bit harder than they did four years ago. We will also see that they will not work for any less than they did then. If they think they are not receiving enough on the farm they will go to work in a munition factory for four, five or six dollars a day, for you know the soldiers must have shells to shoot at the Germans, and it is the duty of every good loyal citizen to make shells, especially if they can get five or six dollars a day. Their daily prayer is that the war may last so long as they are filling their pockets with money and increasing their bank accounts. They care but little about the soldier who is fighting his battles and bearing the heavy burdens of the war. All they care for is themselves."

HOW THE TROUBLE STARTS

If more people knew how Rheumatism and kindred illsstarted there would be infinitely less suffering.

It should be a matter of popular knowledge that the blood stream completes the circulation of the body in approximately three minutes, gathering up waste matters. It is the function of the Kidneys to remove these impurities or poisons from the blood and eliminate them from the body. Should there be any derangement of the Kidney action the poisons are not eliminated but are carried around again in the blood stream, to accumulate slowly and occasion sickness and distress. Then follow pains in the back, in the region of the Kidneys, Rheumatism, constant headaches, and the many complaints arising from derangements of the Kidneys or Bladder. First, the Kidneys must be put in order and until these organs are healed and regulated no real health is possible. Gin Pills contain the medicinal and tonic properties that the Kidneys require.

You can get Gin Pills at all dealers—50c a box or 6 boxes for $2.50, or a sample will be sent free upon request to the National Drug & Chemical Co. of Canada, Limited, Toronto, or to the U.S. address, 202 Main St., Buffalo, N.Y. 134

ON GUARD AT THE READING GATE!

It is a fine thing to guard our homes against alien soldiers of whose purposes we are aware. But it is also very important to guard them against other insidious foes that creep in under the disguise of friendly entertainers to plunder and destroy the cherished ideals, the lofty standards, the clear views that have given the home its character.

If you will familiarize your young people with the best reading, they will not be likely to crave what is inferiorand valueless. The Youth's Companion is a powerful influence in awakening a taste for what is best in reading. It is on guard at the reading gate! Nothing cheap, mean or hateful passes its challenge. But neither does the crabbed and dull and austere. Cheery idealism is The Companion's countersign. Put it on guard at your reading gate!

The Companion is $2.25 a year. If you do not know it, by all means send for sample copies giving a Forecast of what the next volume will bring.

One offer includes, for $2.25:

1. The Youth's Companion—52 issues of 1918.
2. All the remaining issues of 1917.
3. The Companion Home Calendar for 1918.

FIVE FUNERALS IN THREE YEARS.

Family Almost Wiped Out By Consumption.

From a hovel in the rear of one of the pretentious buildings comes a ghastly tale, one that in this fair Province of ours seems almost incredible; yet, those who know the ravages of consumption, it is but a typical case.

Grief stricken, the mother tells of her five small children buried from this lowly home during the past three years, of her only remaining child, suffering from a tuberculous hip, and then as though in mockery of this misery, the father, too, was stricken. He is now a patient at the Muskoka Free Hospital, where every endeavor is being made to save his life. The Muskoka Free Hospital for Consumptives is appealing for help to carry on this fight against the Great White Plague. The money you give will help them seek out these unfortunate families and give them a fighting chance for their lives.

Contributions may be sent to W. J. Gage, Chairman, 84 Spadina Avenue, Toronto, or Geo. A. Reid, Secretary-Treasurer, 223 College St. Toronto.

A Tiny Ambassadress

By Augustus Goodrich Sherwin.

(Copyright, by W. G. Chapman.)

"School—Drive Slow," read signs five hundred feet from the structure in question in every direction, and, nearing one of these, Gordon Leigh shut down his high-powered automobile to second speed.

The friend with him bestowed a commending glance on his thoughtful and even-minded companion and nodded slightly to a group of our teachers, who joined in his approbation, recognizing the delicate courtesy paid to the painted suggestion.

Then he thought no more of it, as they passed the slow belt and the machine sped up to normal, until Leigh remarked, with a half laugh:

"Don't think me the overobliging and considerate friend to humanity and township restrictions altogether. There's a pair of bright eyes among that quartet for a glance from which I'd make the auto crawl! The young lady in blue. Do you know her?"

"I don't, Leigh. One of the new term teachers, I fancy."

"Well, I am going to know her," declared Leigh persistently.

"Struck?"

"Vitally. She is the most charming girl I have ever seen."

The friend shrugged his shoulders, thus dismissing what he considered a passing fancy. Leigh said no more. However he thought. The next morning, just approaching school, he started again over the route of the day previous.

"Holly Hoitty, little one!" he hailed, halting the car as he noticed a tiny miss sobbing and in tears and wiping the dust from books and slate. "What's the trouble?"

"I fell down and mussed everything up, and I'm afraid I'll be late at school, and my apron got torn, and I stubbed my toe, and—"

"There! we'll get you to school in plenty of time, little lady," declared Leigh with heartiness, and he lifted the child into the rear seat and with his handkerchief flecked the dust from books and dress.

"Oh, I know who you are!" she surprised him by saying, as her tears dried.

"Do you, indeed?"

"Yes, sir; you're the gentleman Miss Lewis likes," prattled the little one.

"And who is Miss Lewis, may I ask?" interrogated Leigh.

"She's my teacher—the pretty lady in blue, and when she saw you go by so slow and so careful of the little ones, and going way around to the curb for fear you'd disturb the ring full of marbles in the road, she said, 'There's a man.'"

"Why, of course I am a man. You wouldn't call me a boy, would you, little lady?"

"Oh, it wasn't that way she said it," objected the child. "This is the way she said it: 'There's a man!'"

Leigh smiled, he thrilled, too. Unmistably the novice oratrix imitated the sentiment of a commendatory announcement. Miss Lewis approved of him, that was sure. So much gained, the ice broken. He was thankful.

"And she said, 'Yes, that's so'" proceeded the juvenile massenger.

"Who to? What for?" projected Leigh, feeling guilty at thus leading on the innocent chatterer, yet immensely delighted withal.

"Why, one of the other teachers had said, 'What a handsome man'!"

"I'm!"

"And you are, because my ma says my pa is the very handsomest man in the world, and he's got eyes and a smile just like you."

Gordon Leigh's life and thoughts now began to center about the young lady in blue. He learned casually that her given name was Vera, and fancied it the sweetest name in the world. He found out further that her folks

At the Door Was a Second Ruffian.

lived ten miles from the village, whom she visited from Friday night until Monday morning.

The garage where he kept his auto was also the town livery. He drove into it late one Friday afternoon to be immediately interested in a conversation going on between the proprietor and one of his employees.

"We'll have to disappoint Miss Lewis this time—she'll have to wait till morning," the latter was saying. "The old rig we take her home in broke down five miles from town. All the other rigs are out till midnight, up at the harvest festival at Durham."

"We must arrange it some way. Miss Lewis is a weekly customer and we shouldn't disappoint her. I'll telephone her and you can make the run with the first machine that comes in."

"That may not be for five hours," explained the hostler and Leigh, obeying a speedy impulse, stepped forward. He was well acquainted with the proprietor of the garage. He had no difficulty in securing his assent to a daring proposition. Thus the garage man telephoned:

"Sorry, Miss Lewis, but the regular rig has broken down. I will send a machine to take you over home. Call for you in fifteen minutes." He smiled as Leigh, insisting that it was going to rain, enveloped himself in a great storm coat and with a cap coming well down over his eyes resembled the conventional chauffeur.

Leigh drove up to the house in the village where Miss Lewis boarded. His heart gave a bound as she came out, so pretty and dainty that he wished he could claim her for his own on the spot and fly with her to some sunny clime.

"Please stop at the office of Mr. Byram," she directed. This was the leading attorney and real estate man of the town. His office fronted on the street and through a broad plate glass window Leigh could see him go to a safe, take out a large envelope and hand it to Miss Lewis. She pinned it carefully inside of her coat, came out and the journey was resumed.

It had grown dark and a steady drizzle of rain had begun, but Leigh wished the ten-mile spurt was a century run. Even after Miss Lewis had thanked him in her pleasant gracious way and had gone into the house, Leigh feigned necessary adjustment of the machine to delay and watch through the windows the cheery picture of father and mother and daughter in a nest of rare comfort and peace.

Half way back to the village Leigh halted at a cross-road station to adjust the carburetor. As he did so for the first time he noticed lying in the seat which had held his fair passenger an envelope—the envelope that Miss Lewis had brought from the town. A glance beyond its unsealed flap showed bank notes of large denomination, a goodly heap of them.

It flashed across him that Miss Lewis must have been bringing a large sum to her folks. The envelope must have come unpinned. Her anxiety when she discovered this would be intense. Leigh was glad of an excuse to so soon again seek her company.

He leaped from the machine as he reached the old farmhouse. As he neared the open entrance he quickened his steps. An alarming situation met his startled vision.

Vera sat spellbound with terror behind her father, whom a man confronted, fierce and menacing of mien. Mrs. Lewis lay in a swoon. At the door was a second ruffian with revolver extended. In an instant Lewis divided that these thugs, with some knowledge of the expected cash, were meditating a robbery. He stole as if velvet shod down the hall.

Three rapid movements; one, and he had disarmed the sentinel; two, and he thrust back the threatening scoundrel from before the old man; three, and, his cap awry, he stood revealed in propria personae to the astounded Vera.

So, Gordon Leigh had saved the day. "But I don't understand how you came to drive Vera here," observed the grateful Mr. Lewis. And then Leigh blushed and stammered. Vera blushed, too. She understood.

She understood far better within that same week, when in detail Leigh confessed the dire straits to which love had driven him—and was glad.

One day's exposure to a chilling rain at this season will reduce the production of a milch cow for a month.

Cabbage and turnips are not harmed by ordinary frosts, and carrots and parsnips are improved by freezing.

The American cranberry crop for this year is estimated at a scant million bushels, or just about two-thirds of what it was in 1916.

About the House

DOMESTIC SCIENCE AT HOME

Seventeenth Lesson—Meats.

Meat is a bundle of lean, muscular fibers that are held together by connective tissue, containing albumen, or protein; gelatinoids, or gelatine, and extractives or flavoring.

There are two factors to be remembered when cooking meat:

First. When making soups, broths and teas, the meat is placed in cold water and brought slowly to boil and then cooked on the simmering burner at a temperature of 185 to 190 degrees Fahrenheit. By using this method, a rich delicious broth is obtained which contains all the nutriment of the meat.

Second. When searing the outer surface of the meat, quickly use a strong heat. This keeps the juices and nutriment in the meat. Then continue cooking the desired length of time. By using this method all the gelatinoid and extractives are kept in the meat.

It is a known fact that albumen, gelatinoids and extractives or flavoring in meat are soluble in cold water.

Marketing

Many housewives try to eliminate this feature of the household regime as much as possible and so order by telephone or leave it until the last minute and then rush out to buy anything, better-or-worse. This part-cashing of food supplies should be the most important duty of the housewife. In this day of advancing prices it behooves us to husband very carefully our resources. Get full value for each penny spent.

By this I do not mean purchasing cheap foods, but that you must know just what you want and the time to get it. Cook in an appetizing manner and serve temptingly and you will feel well repaid by the hearty appreciation of your family.

Do not order by telephone if you can possibly help it. Slip on your hat and coat and see for yourself just what you are paying for. Under your own personal supervision your butcher or grocer will give you much better service.

Many housewives feel very inexperienced at buying. When about to purchase meat and unable to make a choice of cuts she invariably falls back on, "Oh, I guess steak or chops will do." Or, "I really don't know what to get; I'm tired of meat, anyway." Many butchers, realizing this state of affairs, gladly take advantage of it and play upon it to the utmost of their powers.

Know the Various Cuts

It will be found that knowing the cuts of meat and being able to judge by appearance will help, but first and foremost the odor of the meat will give you a definite idea about its condition. The odors of poultry and fish will help you in the same way. Meat should have a good appearance. By this I mean it should have a good red color shortly after cutting. The fat should be creamy white and firm in appearance, and should have a pleasant meaty odor. All this is absolutely essential for good meat.

About 20 per cent. of the beef carcass is in the fine and fancy cuts of meat and, therefore, accordingly high in price, because three out of five women usually say "steak."

Here are a few recipes for the cheaper cuts of meat, which are delicious and nutritious, and they will be heartily welcomed by the man of the family:

Casserole of Shin Beef

Prepare two pounds of shin beef by browning quickly in two tablespoonfuls of fat in hot frying pan. Then put in casserole dish or baking dish and add four medium-sized onions, six potatoes, one pint of water. Put the cover on the dish and bake for one hour in a moderate oven. Or use a saucepan that can be covered tightly and then cook on the simmering burner. Thicken the gravy with browned flour. Season with salt, pepper and finely chopped parsley. Then serve.

A Giant in the Mountains.

Speaking of nature's curious imitations, perhaps the most remarkable of its kind is the so-called Hooded Knight, beheld with awe by many a tourist in the Gila National Forest, New Mexico.

Weathered out from a volcanic peak, it presents a profile grim and impressive. For untold ages it has looked sternly down into the depths of a canyon, and very likely it will still be doing so when the last human being has vanished from the earth.

A taut wire stretcher along the pantry shelf wall is a good holder for all the tin lids. Slip them back of it, and the knobs will hold them in place.

Reducing Expenses

The war has so increased the cost of living, the housewife must make her money go further.

By using Red Rose Tea, which chiefly consists of strong, rich Assam teas, she can keep her tea bills down. The rich Assam strength requires less tea in the pot—and there's only one tea with the rich Red Rose flavor!

Kept Good by the Sealed Package

640

A Damp Bethrothal.

The Tarascan Indians of Mexico, says the National Geographic Magazine, have one of the strangest betrothal customs in the world. The land of the Tarascans lies due west of Mexico City, and the natives retain many of their practices that were well established before the Spaniards landed at Vera Cruz.

The accepted method of courtship sends the lover to the spring where the object of his affections is accustomed to fill her water jar. He holds her shawl until she accepts him, and then, with a stick, he breaks the jar that she holds on her head, and gives her a betrothal baptism of water.

The Tarascans, it is said, once possessed the secret of tempering copper—an art that is now lost to the world.

You can brag about your garden all winter if you have your canned evidence on the dinner table.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

To wilful men the injuries that they themselves produce, must be their schoolmasters.—Shakespeare.

"NOTHING BUT A COLD."

A very great factor in catching colds is the disturbance of the body's equilibrium by passing from the superheated home, where one gets into a perspiration, into the freezing open. Healthy living is the constant and right adjustment of internal relations to external relations. Normal relations are thrown completely out of gear by the procedure just stated.

An intimate feature of the common cold is catarrh, inflammation of the mucous membranes of the nose and throat. Some catarrhs have a nervous relation. People nervously exhausted—neurasthenic—are apt to get a catarrh in the fall and not to be rid of it until winter is well past. Such folk will have a nervous catarrh simply from the apprehension of catching cold.

The neglected cold, considering its consequences, is the most serious of human ailments. Could its sum total in suffering, money loss, inconvenience, in its infection danger, and in the fatalities which are oftentimes, though perhaps remotely sequel to it—could this sum total be properly appreciated, no one in his senses would say the common cold is a trifling thing.

The common cold leads to, predisposes to many diseases, by weakening the body and by destroying the protective properties against germs, inherent in the mucous membranes of the nose and throat. To two diseases the common cold leads pre-eminently—consumption and pneumonia. The captain of the men of death and his first lieutenant, pneumonia, account between them for more than half of all human mortality.

Cold seem to be the exclusive privilege of civilization. The human race probably did not begin to snuffle until it began to build houses and to wear clothes. The next step toward the handkerchief era was when houses began to be heated. Then, instead of a glorious, healthy, vigorous battling with the elements, people crowded into their superheated dwellings and then they began to know the nature of colds. Fresh air abounds all over the surface of God's earth, except in the houses which man has built. Not fresh air, but the want of it, is the cause of many diseases, the preface to which are colds.

QUESTIONS AND ANSWERS.

Catarrh and the Nasal Duct.

I have catarrh of the nose. The nasal passage is choked up, causing the eye on the affected side to become feverish and to feel very enlarged.

Answer—Don't temporize for a moment. There is at least inflammation of the lachrymal or tear duct, which runs from the eye-socket to the nose. Possibly also extension of the catarrhal inflammation to the orbit, the eye socket.

Globus Hystericus.

What is the cause of a slight strangling feeling in the throat, a kind of dryness that keeps me from swallowing. The trouble is at the Adam's apple.

Answer—I could not of course be sure in the circumstances; but the trouble is probably globus hystericus as the doctors call it—a symptom of hysteria. Better be examined however and be sure.

MOTHER-WISDOM

During Knighthood Years Children Need Most Patient Treatment

By Helen Johnson Keyes

In a former article we decided that children will be good if they are given a chance. Shall we look further into parents' duty and privilege in this direction?

Boys and girls at the knighthood age, from ten to fourteen years, are wild, strange and incomprehensible to most grown-ups. Boys want to fight, to throw stones, to have secrets. They are like the knights we read of, who went out to seek adventures, to try their swords against other brave knights; who made trouble just in order to mend it; who loved masks and disguises, wizards, dungeons and castles. These knights seem absurd and childish to us, but they worshipped God, served their country and were true to the best in themselves.

Girls become sentimental, mysterious, full of giggles. They are less wholesome than the boys of their age but they can be led easily to sweetness and religious enthusiasm. It is a fine, brave age, both for our girls and boys.

It is an age of idealism, of hero-worship and reverence. They find out something then which gives them an insight always into the higher, nobler aims of life. We do not want our children to become the sort of men and women who forget God because they have too much to do, who slight love because they are concerned only about money, who see nothing beyond the monotony of the daily tasks.

Allow them the special preparation granted by this period in childhood when romance and poetry throb with life. They will never forget it. Its spirit will come back to encourage and cheer them in years of maturity when days have grown intolerably dull. It will be like a window then, into the land of promise. Through it will shine the "light that never was on land or sea" but which makes bright the hearts of those who know how to "become as little children."

Whatever your boys and girls do at this age, try to remember that back of their deeds is idealism. What I mean by idealism is rule by idea. In the animal stage they were ruled by their stomachs; in the savage stage by their five senses; in the period of knighthood, ideas have taken hold of them.

The ideas may be foolish, laughable, dangerous; nevertheless, they are the first reaching-out of the soul and spirit toward things not born of the flesh. Do not ridicule them or you may kill a soul.

Let your children have at this time, plenty of space, plenty of hard, open-air fun as well as systematic work and companions of their own ages. Their stone-throwing, their "gangs" are not necessarily dangerous to the community; even the sentimentality of the girls may be turned into useful channels. All these age-developments can be controlled and made educational. We shall have more to say about them in another article.

Remember that although this period is very difficult for the parents, it is worth while to be patient and affectionate. It leads into adolescence and unless mothers and fathers have held their boys and girls close to them all through their previous development, it will be impossible to establish so late, that intimate sympathy necessary to wholesome, virtuous development at the trying age when they grow into maturity.

Let them be co-operators on the farm, not mere laborers; make their home a pleasant place for them and their friends; give them cheerful bedrooms of their own where they can be alone sometimes. Respect them and let them know you do.

By the time they are fourteen they begin to belong to the generation in which they are really living. This period lasts from fourteen to eighteen years of age. They have a firmer understanding than before of property, of truth, of peaceful relations. Nevertheless, there are strange and painful changes going on in their bodies and minds which make these adolescent boys and girls restless, unhappy, cross, unfriendly.

They desire and need hours of solitude, they require to be managed with an almost divine patience, for they are suffering in many ways. Their self-assertiveness and their unruliness tax us to the utmost but this is not an age for the discipline of words. Regular, wholesome work on the farm and in the home should be employed but nagging, no fault-finding, no appying upon their occupations.

It is an age of rebellion. Boys and girls who have always been obedient and steady become disobedient and unreliable. This mood will pass. If you have been gentle and sympathetic, ready to help, ready to provide time for wholesome play and companionship, you will find your children very close to you when they come out of this chrysalis stage, bright-winged butterflies.

How different now are the experiences and outlooks of the wise and unwise mother! The one has healthy children, firmly established in habits of observation and work, with ideals of courage, family life, religion, to exult the routine of daily labor, to give that routine meaning and an object. The other has children already embittered, sour and bored. Indigestion, lack of self-control, lack of interest in the world and other people; a sense of isolation even from mother and father, perhaps render them unable to make the supreme struggle for purity and usefulness in the hour of budding manhood and womanhood.

You see what I meant when I said, "Children will be good if you give them a chance to be." That is the duty and privilege of all mothers and fathers. It is not easy. Oh no! But it is worth while. Someone has said, "A mother has the power to sow a thought and reap an act; to sow an act and reap a character; to sow a character and reap a destiny." Is it not the most wonderful and rewarding thing in the world, then, to be a wise mother?

Perhaps some of us have only begun to learn this wisdom when our babies are no longer babies but well on the road to older boyhood and girlhood. All is not lost even then! Love can accomplish wonders when will to do better goes hand in hand with it. A child is like a plant and responds quickly to improved treatment.

Hogs

Feeding Fall Litters.

Pigs raised by a mature sow get a better start while young and give greater profits than the pigs from a young, immature sow. To increase the number of brood sows by selection from last fall's litters, one should choose the thrifty, broad-chested sows and leave out the narrow-chested, pinch-bellied ones to be prepared for a market for a convenient season.

Pigs sired by mature boars are generally larger and more thrifty while young than those sired by immature boars. It is expected that the fall pigs will be farrowed as early as October. At that time the sows with their pigs should be allowed to run in the open where there is an abundance of green feed, clover, alfalfa, rape, or rye. If the sows are fed sloppy feed at that time they will give a liberal amount of milk.

When the pigs are about three weeks old they will want to eat more than the milk they can get from their mother. A small shallow trough should be placed where the sow cannot get to it. Scald some middlings, stir and pour in some milk; if the milk is sweet, all the better. Put into the feed about a tablespoonful of molasses. Drive the little pigs carefully over the trough. They will get the odor from the molasses, put their noses to the feed, lap it, and begin to eat.

It will not be necessary to drive the pigs to the trough again. They will go to the same place the next day. They should be fed some warm feed twice each day. If any feed is left in the trough it may be put where the sow can clean it up. Always feed the pigs in a clean trough.

After feeding the pigs in this way for a week or two, coarser feed can be used, and sour or butter-milk in the place of sweet milk. But one should continue to scald the grain feed and feed the pigs while it is warm. Increase the amount of the feed as the pigs grow.

Pigs fed in this manner should weigh 50 pounds at weaning time, when they are about eight weeks of age. If the warm feed is continued, there will be no check in the growth by taking the sow away from them.

Always give the pigs a warm, dry place in which to sleep. Do not allow much air space above the nest. Give an opportunity for an abundance of exercise and a variety of feed. It is practicable to push them to popular market weights by the time they are seven months of age. The gains are made more cheaply before that time than it is possible to make them after that age. As true patriots we must not miss planning for the fall litters, and when they arrive we should make the most of them.

Reforestation.

The problem of reforesting areas that are otherwise unproductive should be considered by agriculturists. Perhaps next in importance to the disposal of brush and slash is the effect of close cutting on hillsides. In many instances, the clearing of trees from a slope has encouraged a washing of soil that not only ruins the slope but also buries the productive field at its foot and greatly increases the damage done by brooks at flood conditions.

Horse Sense

Onesome-Belgian farms before the war horses brought in as much income as the land itself. Belgium will need help in horse growing after the war. Can't we do something at it? Have to be pretty good horses if we do, for those people are past-masters in horse breeding, especially in the draft type.

Growing colts should never be wintered on hardwood floors. Box stalls with well-drained dirt floors should be provided for them. Roadster colts need more space for exercise than the draft colts. "Good colts are always the product of a liberal, careful feeding. A stunted colt is always the starved colt, and it can never hope to catch up.

Well-mated teams sell to much better advantage than single animals. It is a pretty good plan, when you have a horse or colt for sale, to buy a mate and sell the two together. The increase of twenty-five per cent. in selling price will warrant it if the animals are well matched in size, color, conformation and strength.

Mrs. Progress and Mrs. Oldways.

"Do tell me why you put that piece of old muslin over the turkey?" asked Mrs. Oldways of her neighbor. "I'm rather curious to know."

"To keep in the steam and make the bird tender," replied Mrs. Progress.

"But does the turkey get brown when roasted that way?"

"Indeed it does, but a half hour or so before serving I remove the cloth, put the turkey back in the oven, and I feel sure that it will be cooked to a turn, deliciously tender and as nice a shade of brown as one could ask for."

"Well, the new to me, but it sounds good. I have a mind to try it," said Mrs. Oldways as she went out of the door.

Keep Windows Open.

Get into the habit of living in a house with all the windows open, rain or shine—night and day. You can't possibly get too much fresh air. The very fact that people say their houses are damp and chilly shows that the windows have not been open enough, says a prominent health authority.

Damp houses come from not having enough air to dry them out. Even on the rainy days it were better to open wide the windows and let the fresh air in and even a little rain—than to shut the windows down, stopping the entrance of fresh air.

The healthiest people in the world are the savages, and they live out of doors in the rain as well as in the sunshine. Don't be afraid of fresh air at any time.

Do not neglect a cold. Keep yourself in good physical condition by observing the laws of health. Dress warmly, but not too heavily; get all the fresh air and sunshine you can; sleep with your window partly open at night and keep yourself well by every other possible means.

The potato was first introduced into Spain by Hieronymus Cardan, a monk, in 1553; into England by Sir John Hawkins and Sir Francis Drake in 1563; and into Ireland by Sir Walter Raleigh in 1586.

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

C.H.:—I have a piece of sod land that I wish to plant in corn next spring. Should I spread manure on before it is plowed?

Answer:—I would advise you to have your sod ground plowed this fall, and allowed to stand over winter. Then spread the manure on top of the plowed furrows in the spring before you disk the ground in preparation for corn. On very heavy soil it is sometimes advisable to plow in strawy manure in order to open up the soil. Conversely on very sandy soil it is sometimes advisable to plow in strawy manure in order to give body to the sandy land, but on normal loam soil the treatment recommended has given the best results.

L.J.:—What is the best way to plant and handle a bean crop? Are bean harvesters satisfactory? What is the best soil for beans?

Answer:—1. Beans do best on a fairly compact well prepared seed-bed that is loose on top. They thrive on a fertile soil that is neither extremely light, nor too heavy and compact. The soil should be well drained. Beans are a quick-growing, short-seasoned, early maturing crop. An abundance of available plantfood is needed in order to produce rapid growth and maximum yield. On a medium loam soil the application of 200 to 600 pounds per acre of a fertilizer carrying 1 to 2 per cent. ammonia and 8 to 10 per cent. available phosphoric acid along with 1 per cent potash, if it is obtainable, will give this rapid start and vigorous growth. Successful bean growers apply this fertilizer through the attachment of the grain drill, either at seeding time or one or two weeks previous to planting. If you have no fertilizer attachment on the grain drill apply the fertilizer through a lime distributor previous to drilling, but be sure to work in the fertilizer by thorough disking and harrowing the soil before the beans are planted. The amount of seed to plant per acre depends upon the variety. Two to four pecks of the pea bean or four to five pecks of the larger variety has given good results.

In cultivating the beans be careful not to cultivate too deeply. Bean roots are shallow. Do not cut off these roots or cultivate the beans when they are wet, since there is a danger of spreading disease at this time. As a rule bean harvesters do satisfactory work.

P.T.:—1. In your opinion what is the best variety of potato for marketing? 2. I wish to seed a six-acre field to alfalfa in the spring. What variety would you advise? 3. Is it best to sow grass seed in front or behind the disks in a disk seed drill? The field is a sandy loam.

Answer:—1. There is no best variety of potatoes for all markets. Professor Zavitz of Ontario Agricultural College, who has given the subject careful and long study, reports in his most recent bulletin that for table quality, Empire State, Rose's New Invincible, Rural New Yorker No. 2 White Elephant, and Stray Beauty are all good potatoes. The first four rank above 75, when judged on the basis of 100 for perfect table potatoes. They are also heavy yielders. For early potatoes, Stray Beauty, Howe's Premium, and Early Ohio rank high. 2. As a general rule Grimm alfalfa has given exceedingly good results in the middle west. There are other hardy strains being introduced from seed which is imported from Russia. 3. Grass seed may be sown broadcast in front of the disks, or the conveyers from the grass seed box may be attached so that the seed is sown with the grain seed, falling through the boot. On a sandy loam soil, if the grain is not sown too deeply, the latter method usually will give the best results. If the grain is being sown very deeply, however, it would be better to allow the grass seed to drop broadcast in front of the disks and to rely upon its being thoroughly covered by the chain drags which follow the drilling attachment, or if press wheels are attached, they will deposit the seed satisfactorily.

Poultry

When Poultry is Ripe for Market.

The roasting fowl must be young, full grown, plump and well finished. It is ripe for a choice roaster only a short time. It is well finished when fat and lean meat are well intermixed in good proportions. An unfinished fowl lacks flavor, and does not present an appetizing appearance when prepared for the table. The flesh appears shrunken and the bones are prominent. Besides, the meat will be dry and tough.

Before starting to lay, the pullet makes an ideal roaster, but after she has started to lay the flesh becomes tough. When the spurs of the cockerel harden, the flesh toughens.

Hog fat is not a desirable condition for market poultry. Close-grained carcasses are preferred. Large, rough, coarse fowls are not in good demand. There is better eating in a stag than in a shale that has been mated. As a rule, a hen is a better roasting fowl than a male.

The spring chicken is one hatched not earlier than February, nor later than May, and is ripe for market when two or three pounds in weight. Chicks hatched the last of August, or the first week in September, are fit for the broiler market about the end of November.

The Dairy

Hair in the region of the udder should be kept short by clipping, since the hair harbors dirt.

If strongly flavored foods such as turnips or cabbage are given at any time except immediately after milking, the milk is likely to have the flavor of the foods.

To insure strong, vigorous, healthy winter calves, provide the pregnant mother with clover or alfalfa hay, corn silage, and from two to four pounds of a grain mixture composed of two parts oats, two parts wheat bran and one part by weight of linseed-oil meal. Grain should be fed sparingly for a few days prior to and after calving.

It is always desirable to grind all grains for the dairy cow because of the large amount of feed that a cow must digest in order to produce milk.

When butter becomes strong and rancid, break it up into new milk, working this through it; then take out the butter, wash it and work the milk out of it as you did the butter-milk in the beginning.

Glad to Hear of Promotion.

Private Smith, after serving three weeks with the forces had fallen beneath the avenging eye of the C.O. for some petty offence. Thereafter he sent this touching epistle to his mother: "Dear Mother—I am now a defaulter." His grief was too great to write more, so he got a comrade to mail it for him, and sat him down to do his punishment in silence. Five days later he got this: "My Dear son—I am so glad to hear of your promotion. Be sure to be kind to the men under you, and never forget that you were a private once yourself."

GLAMIS

The death of Mrs Kate Rowan, a former well known and highly respected resident of Glamis, occurred at Grace Hospital, Toronto, on Thursday. The remains were brought up on Friday and interment was made in Purdy's cemetery. The deceased had been living with her sister, Mrs Ross of Calgary, for the past year. A few years ago she came to Toronto and entered Grace Hospital for treatment. Her trouble proved serious, the doctors pronouncing it cancer of the stomach. The late Mrs Rowan was a daughter of the late Rev Mr Ferguson, who was pastor of St Paul's church here for a number of years. She is survived by one daughter, Miss Georgie Rowan, who is superintendent of Grace Hospital, Toronto, also two sisters—Mrs Ross of Calgary and Mrs Murison of Toronto, and two brothers—James of Winnipeg and John of Vancouver. Her husband predeceased her a good many years ago. Mr Georgie Rowan and Mr John Rowan accompanied the remains of deceased from Toronto.

Mrs John Deehan returned from Toronto on Friday.

Mrs J R McNally, who spent several weeks with her daughter Mrs Chas Graham, has returned to her home in Sarnia

Miss Ella Cunningham spent over the week end with friends in Tiverton.

Mr Allen McKinnon, who went west on the harvest excursion, returned on Friday.

Mr Jos Cunningham attended the Library Institute in Guelph on Thursday. He also went to Toronto before returning.

Mrs Griffin spent a few days with her mother, Mrs McCormick

Mrs W J McKeeman, Clyde and Miss McKeeman and Miss McIntyre motored to Chesley on Tuesday of last week and spent the afternoon with friends.

The marriage of Miss Clara Purdy, only daughter of Mr Henry Purdy, to Arthur Drowen, takes place on Tuesday

Mr and Mrs McKeeman and Mrs H Campbell spent Wednesday of last week with friends id Southampton.

The W M S of St Paul's church will hold their thank-offering meeting on Friday, Nov 23rd. Dr Andrew Robertson of Toronto will be the speaker of the evening.

PINKERTON

At the regular meeting of the Red Cross Society last Thursday, the following supplies were shipped: Red Cross Supplies —80 suits pyjamas, 3 quilts, 2 pillows, 3 pillow covers, 4 articles old linen, 400 mouth wipes. Soldiers' Comforts—43 flannel shirts, 65 pairs socks, 19 pairs wristlets, 2 pairs socks also sent in the Christmas boxes to the soldiers.

Mr Horace Clark returned from the west on Saturday.

Messrs Amsey Gregg and Dave Pinkerton returned from a shooting expedition to the peninsula. They were not successful in bagging any game.

Miss Hattie Cale returned this week from Toronto where she underwent an operation.

The local Red Cross Society wish to thank the Bradley Canning Club for their kind donation of $7.

SECOND CON ELDERSLIE

Tom Lamont of Owen Sound is spending a few weeks with his sister, Mrs Geo Middleton.

Rosco Case, the Pres., of Eld. Tp Association, visited the 2nd Con. S S on Sunday last gave an inspiring address.

Hughie Campbell went to Harriston on Monday to be examined for overseas service.

The farm land in this section has been changing hands of late. Wm Fritch of Newstadt has purchased the east half of lot 27, con 2, from Samuel Maxwell. Henry Schmidt of Allan Park, Bentinck Tp, has purchased lot 21, and west half of lot 22 on 2, of the Thos Pepper estate and Russell Maxwell, has bought lot 23, con 2, from the Thos Pepper estate.

Mrs W J Allen and Mrs Jas Vancise visited Paisley friends recently.

Plowing is the order of the day.

BRANT COUNCIL

The municipal council of the township of Brant met on the 5th day of November, 1917. Members all present. Minutes of last meeting read and declared correct.

Rowand—Findlay—That a grant of $200 be made to the British Red Cross Society—Carried.

Rowand—Johnston—That the Reeve and Clerk issue orders on the Treasurer for all accounts passed at this meeting of Council.

Johnston—Gregg—That this Council do now adjourn to meet Saturday, Dec 15, for transaction of general business, appointing deputy returning officers, polling places, and to decide on a place for holding nomination.

M. A. McCALLUM, Clerk.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

—The Women's Mission Circle of North Bruce Baptist Church held their Thankoffering meeting on Wednesday afternoon. Nov 7th, there being a fair attendance. Mr Buchanan addressed the meeting, giving many good advices. Miss Mickelson sang a solo. Miss Young Crates Bruce spoke on mission work New Ontario, showing the necessity of Mission Band so as to create a love for mission work in the young minds which all ripen in after years. Mrs Chapman of Port Elgin read an interesting letter from Miss Mires, one of the Indian missionaries. Collection amounted to over $7. Lunch was served at the close of the meeting.

Children Cry
FOR FLETCHER'S
CASTORIA

"Britons never shall be slaves except to drink," is a familiar phrase that casts a reflection upon that great nation. Canadians have about freed themselves from the thraldrom of King Alcohol, but it remains to be seen whether they are still slaves to party politics.

VALENTINE COTTRILL

Kincardine Review: The hour glass of time ran down on Monday noon, and the life of Mr Valentine Cottrill, Victoria Street, passed out. Mr Cottrill suffered a slight stroke of paralysis a few years ago from which he had to a certain extent recovered, but two weeks ago he was subjected to a second attack and gradually sank from that time. Mr Cottrill was a man of fine physique, standing six feet in height and weighing nearly two hundred and fifty pounds. He was of a particularly happy and pleasant disposition and always looked upon the bright side of life. Mr Cottrill was born in Hope, Derbyshire, England, and at the age of twenty-one came to this country, settling at Birr, in the county of Middlesex, where he was married a short time after to Margaret Ann McMechen. To this happy union a family of four sons and two daughters survive with the exception of the eldest son, John, of Weston, who died a few years ago. In the year 1873 Mr Cottrill moved to Bruce township where his wife predeceased him seventeen years ago. About twelve years ago he again married Mrs Mary Morgan, of Kincardine. Four years ago they moved to their nice little home on Victoria St here, where they have been relaxing from the toils of earlier days and enjoying the evening of life together. The three sons, J B, Post Elgin; Charles, Paisley, and George, on the old homestead in Bruce; and Owen daughter, Mrs Oxford, Owen Sound, and Mrs McKinnon, Gresham, were all present at the funeral, which was held from his late residence on Wednesday morning to Inverdale cemetery, and was under the auspices of the Masonic Order of which he was an honorary member of Hiram Lodge No 429, Port Elgin. The service at the house was conducted by the brethren of Northern Light Lodge No 93, Kincardine. Mr Cottrill was also a member of the Orange Order and was attached to the lodge on the 10th of Bruce near Underwood. Rev A H Cree, in the absence of the rector of the Church of the Messiah, of which Mr Cottrill was a member, conducted the services.

The Minister of Finance offers for Public Subscription

Canada's Victory Loan

Issue of

$150,000,000 5½% Gold Bonds

Bearing interest from December 1st, 1917, and offered in three maturities, the choice of which is optional with the subscriber, as follows:

5 year Bonds due December 1st, 1922
10 year Bonds due December 1st, 1927
20 year Bonds due December 1st, 1937

The Loan is authorized under Act of the Parliament of Canada, and both principal and interest are a charge upon the Consolidated Revenue Fund. The amount of this issue is $150,000,000, exclusive of the amount (if any) paid by the surrender of bonds of previous issues. The Minister of Finance however, reserves the right to allot the whole or any part of the amount subscribed in excess of $150,000,000.

The Proceeds of this Loan will be used for War purposes only, and will be spent wholly in Canada.

Principal and interest payable in Gold
Denominations: $50, $100, $500 and $1,000

Subscriptions must be in sums of $50 or multiples thereof.

Principal payable without charge at the Office of the Minister of Finance and Receiver General at Ottawa, or at the Office of the Assistant Receiver General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary and Victoria.

Interest payable, without charge, half-yearly, June 1st and December 1st, at any branch in Canada of any Chartered Bank.

Bearer or Registered Bonds

Bonds may be registered as to principal or as to principal and interest.

Scrip certificates, non-negotiable, or payable to bearer, in accordance with the choice of the applicant for registered or bearer bonds, will be issued after allotment in exchange for provisional receipts. When these scrip certificates have been paid in full, and payment endorsed thereon by the bank receiving the money, they may be exchanged for bonds, when prepared, with coupons attached, payable to bearer, or registered as to principal, as for fully registered bonds when prepared, without coupons, in accordance with the application.

Delivery of interim certificates and of definitive bonds will be made through the Chartered Banks.

Bearer bonds with coupons will be issued in denominations of $50., $100., $500., and $1,000. and may be registered as to principal only. Fully registered bonds, principal and interest on which is paid direct to the owner by Government cheque, will be issued in denominations of $1,000., $4,000. or any authorized multiple of $1,000.

Subject to the payment of 25 cents for each new bond issued, holders of fully registered bonds without coupons, will have the right to convert into bonds of the denomination of $1,000 with coupons, and holders of bonds with coupons will have the right to convert into fully registered bonds of authorized denominations without coupons, at any time, on application to the Minister of Finance.

Surrender of Bonds

Holders of Dominion of Canada Debenture Stock, due October 1st, 1919, and bonds of the three preceding Dominion of Canada War Loan issues, have the privilege of surrendering their bonds in part payment for subscriptions to bonds of this issue, under the following conditions:—

Debenture Stock, due October 1st, 1919, at Par and Accrued Interest.
War Loan Bonds, due December 1st, 1920, at 97½ and Accrued Interest.
War Loan Bonds, due December 1st, 1925, at 97½ and Accrued Interest.
(The above will be accepted in part payment for bonds of any of the three maturities of this Issue)

War Loan Bonds, due October 1st, 1931, at 97½ and Accrued Interest.
War Loan Bonds, due March 1st, 1937, at 96 and Accrued Interest.
(These will be accepted in part payment for bonds of the 1937 maturity ONLY of this Issue.)

Bonds of the various maturities of this issue will, in the event of future issues of like maturity, or longer, made by the Government, other than issues made abroad, be accepted at par and accrued interest, as the equivalent of cash for the purpose of subscription to such issues.

Issue Price Par

Free from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

Payment to be made as follows:

10% on December 1st, 1917
10% on January 1st, 1918
20% on February 1st, 1918
20% on March 1st, 1918
20% on April 1st, 1918
20% on May 1st, 1918

A full half year's interest will be paid on 1st June, 1918.

The Bonds therefore give a net interest yield to the investor of about:

5.61% on the 20 year Bonds
5.68% on the 10 year Bonds
5.81% on the 5 year Bonds

All payments are to be made to a Chartered Bank for the credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture, and the allotment to cancellation. Subscriptions accompanied by a deposit of 10% of the amount subscribed, must be forwarded through the medium of a Chartered Bank. Any branch in Canada of any Chartered Bank will forward subscriptions and issue provisional receipts.

In case of partial allotments the surplus deposit will be applied toward payment of the amount due on the January instalment.

Subscriptions may be paid in full on January 2nd, 1918, or any instalment due date thereafter under discount at the rate of 5½% per annum. Under this provision payments of the balance of subscription may be made as follows:

If paid on January 2nd, 1918, at the rate of 98.19283 per $100.
If paid on February 1st, 1918, at the rate of 98.48838 per $100.
If paid on March 1st, 1918, at the rate of 98.72274 per $100.
If paid on April 1st, 1918, at the rate of 98.8093 per $100.

Forms of application may be obtained from any branch in Canada of any Chartered Bank, or from any Victory Loan Committee, or member thereof. The books of the Loan will be kept at the Department of Finance, Ottawa.
Applications will be made in due course for the listing of this issue on the Montreal and Toronto Stock Exchanges.

Subscription Lists will close on or before December 1st, 1917.

MOTHERS OF CANADA
PREPARE FOR TROUBLE

When a girl becomes a woman, when a woman becomes a mother, and when a woman passes through the changes of middle life—are the three periods of life when health and strength are most needed to withstand the pain and distress often caused by severe organic disturbance. Many the homes in this section would be saved with the following:

St. Catharines, Ont.—"Over forty years ago I was restored to health by taking Dr. Pierce's Favorite Prescription. It was either medicine and doctor had failed to help me or give relief. I had through overwork become all run down in health. I was weak and nearly became a nervous wreck. The 'Prescription' was recommended to me and at the time I started to take it I had not been able to do anything for over a year. I took the "Favorite Prescription" and the "Golden Medical Discovery" as well. It took several bottles but I was completely restored to good health and since that time when I have felt the need of these medicines I have taken them and always with perfect satisfaction."—Mrs. Wm. Baker, 23 Page St.

Stratford, Ont.—I was all run-down, weak, nervous. I also suffered with severe pains through my back. I was very miserable when a friend advised me to try Dr. Pierce's Favorite Prescription and one bottle made me so much better that I continued to use it and was soon restored to health. It gave me strength, cured my backache and built me up in flesh. I have also used Dr. Pierce's Golden Medical Discovery with good results. It is surely a good tonic for women.—Mrs. Florence Cullum, 100 Milton St.

For Sale

The People's Popular Store

New Goods Arriving for Xmas Trade

DURING the last week we bought a large quantity of samples and sold-outs, new goods direct from manufacturers and importers. We expect to have these placed in stock by the end of this week, and will be able to sell them from one-third to one-half off regular price.

We have still a large lot of seasonable, stylish, up-to-date goods at 25 per cent off regular prices, bought and priced before the recent advances in prices at the factories. Below are a few of our leaders:

Ladies' Coats

1917 styles, reg price $40 for $30, reg $35 for $25, reg $30 for $15, reg $16 for $12, reg $22 for $9, and a few broken lines of last season's for $4.98. Also a few skins with quilted lining and fur collars for $5.98, and one only Black Beaver Cloth with mink marmot collar, a snap for $9.98.

Ladies' Furs

We have all the latest 1918 styles in black and colored Furs at 25 per cent discount off regular prices, and our furs were bought before the recent advance in prices. Note our prices: Sable Collar and Muff reg price $57.50 for $43.50; Black Wolf Collar and Muff reg $23 for $17.25; Black Fox Stole and Muff $30 for $22.50; Natural Opposum Stole and Muff $21.75 for $16.50; Golden Fox Stole and Muff $27.50 for $20.60; Vicuna Fox Stole and Muff $14.50 for $10.85; Grey Opposum Stole and Muff $37.50 for $20.65; one only Mink Marmot Muff $10 for $6.00; one only Canadian Kat Muff $12.50 for $9.98; Black Wolf Muff $10 for $7.50; Black Wolf Stoles $8 for $6; Mink Marmot Stoles $5 for $3.75. See our one only Natural Lynx Set reg $31.75 for $23.80.

All these Ladies' Coats and Furs are direct from the best ladies' coat makers and furriers in Canada, and will be sold at less than the cost of production. We have another very reasonable line of goods at special prices considering the state of the markets of the world, viz:

Goods for the Men and Boys—You want a Suit of Clothes, an Overcoat, Underwear, an up-to-date Hat or Cap, Socks, Braces, Collars or Necktiet. Call and see our selection, and you will find our prices are the lowest.

Footwear of All Kinds—Including the celebrated Life Buoy Rubbers from the daintiest over rubbers in all the new heels to the heaviest and best Lumbermen's Rubbers and Overshoes. It is very desirable that you should come to this store and see these goods, examine them, try them on, note the prices, and we will abide by your judgment.

Millinery—In our Millinery Department Miss McWest has got a nice display of Ladies' Trimmed Hats, and prices are now cut in two.

Groceries—We have a full stock of fresh Groceries for Xmas trade. See us for your Currants, Raisins, Peels. Nuts of all kinds, Candies, Dates, Figs, Cheeses, etc. Get your Turkeys, Geese, Ducks and Chickens primed up and get the finishing touches on in feed, and have them fat and plump, and have them dry picked, heads off, crops empty, ready to deliver about the week commencing Dec 10th. Rush them in to us then and you will be sure to get the highest market price.

THE PAISLEY MERCANTILE CO.

THE CITY BAKERY

Conserve! Conserve!

We are proud to say we have the cheapest food on the market. BREAD! BREAD! BREAD! Eat more bread. Save more money.

We have on hand a variety of specialties, only mention a few—California Grapes, Spanish Onions, Sultana Raisins in bulk, Apples, Sardines selling 2 cans for 25c, Layer Raisins, Pimento Cheese, Marchiseo Cherries in the bottle, all kinds of Confectionery, Nut Bars in abundance, Boxes of all kinds.

Did You Ever Use Crisco?

Why not? Cheaper than lard. We have it.

All accounts must be settled by Dec. 1st. Do not forget this.

Produce Wanted

F. S. MacLachlan

See our Fall and Winter

Suitings and Overcoats

We have a large selection to choose from, also our Blacks and Blues are the very best that can be procured, at reasonable prices.

We have secured a large line of samples of

Ladies' Goods in Suitings and Coatings

which will be worth your while to look over, and we have the newest styles to choose from. We make these up from $16 up, depending on the goods and styles.

I. S. CRUICKSHANK

Specialist in Ladies' Tailoring

Winter Term from Jan. 2nd

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Stands out to-day before the public with a clean-cut record for successful work. A training in this school paves the way to bigger and better positions of responsibility. Arrange now to enter at an early date. Thousands will soon be required for office positions. Let us train you and we will do it right. Write to-day for our large catalog.

W. J. ELLIOTT, Pres.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

Died in the Hospital

Mr Allan Robertson, an old stone-mason and plasterer who was taken from Wingham the Bruce Co. Hospital recently, suffering with pneumonia, passed away on Nov 19th in his 65th year. The deceased who is a bachelor, was laid to rest in the Walkerton cemetery.

The Potato Crop in Canada

The yield by provinces for 1917 crop is reported to be as follows: Prince Edward Island and Nova Scotia 19? bushels per acre, British Columbia 166 bus, Alberta 157, New Brunswick 149, Ontario 133, Saskatchewan 133, Manitoba 106, Quebec 80.

—Mr Obie Johnston was in Toronto for a few days last week.

—Mr S. K. Kwast of Elderslie is visiting his daughter near Stettler, Alta., for a month.

—Miss Jean McClure, of Lucknow, was the guest of her cousin, Mrs R. B. Grant last week.

—Tom Marks and a lot of other people were at the town hall on Monday evening. They made a merry gathering that filled the house. Tom sure knows how to work the get-together act.

—Sergt Tucker, of the C. E. F. Medical Corps, was in town on a few days' leave last week. He is on the staff of the soldiers' hospital at Kingston, and had just returned from taking a hospital train to Vancouver, B.C.

—Commissioner Arch McLean, of the Bruce Telephone System, is again elected chairman of the executive of the Canadian Independent Telephone Association, of which the annual convention was held in Toronto last week. Mr McLean, Mr R. Fullerton of Paisley, and line manager Jones attended the convention.

—Mr Boston Wells, of Pinkerton, was down to Newmarket recently to visit his youngest brother Bert, who is an inmate of the soldiers' convalescent hospital there, under treatment for nervous trouble. Bert enlisted from Tisdale, Sask., where he was farming, and has done his bit on the fighting line in France.

Anniversary Services

IN

Baptist Church, Paisley

ON

Sunday, Dec. 2nd

Rev. V. L. Shantz, of Chesley, will preach.

SUBJECTS AND SERVICES:

11 a.m.—"The Three Graces in the Garden."

2.30 p.m.—public meeting—"Questionable Amusements."

7 p.m.—"Our Heritage."

Evangelistic Services

Every week night, conducted by Rev. Mr. Shantz. Everybody invited to attend.

On Last Leave

Spr Ross Laidlaw, of the Divisional Signal Corps, is home from Ottawa on last leave.

One of Him Wounded

Pte Stanley Martin, son of Mr and Mrs Wm Martin of Mount Hope, was reported among the list of wounded last week. He is one of four brothers who have enlisted.

Joined the Aerial Service

Mr Harvey Bell is spending a few days visiting his parents, Mr and Mrs D. Bell, before going into training with the flying corps at Toronto. Harvey has been teaching near Saskatoon, Sask.

Among the Casualties

Pte Wm Grainger, is another Elderslie soldier who is here de combat at present. He is reported wounded and gassed. He is an English man, but had been working with farmers in Elderslie for ten years or over.

Nurse Dryden Home

Miss Mary Dryden, who has been for a year on the staff of the Imperial nursing corps at the Queen Alexandra Hospital, Brighton, England, for a year, arrived from overseas last week, and is at the home of her mother, Mrs W. Dryden, Victoria St south. She will be here for two or three months.

Pinkerton—Clark

Two well known young people, Miss Margaret Clark, daughter of Mr Harvey Clark of Greenock, and Lloyd Pinkerton, son of Mr. David Pinkerton, of Pinkerton, were quietly married on Nov. 13th, at the Presbyterian manse, Walkerton, by Rev Thos Wilson. The happy young couple went to Detroit on a honeymoon trip.

Bruce County in the Million Class

County organizer W. B. Barber sends out the advice on Tuesday that the people of Bruce County have now subscribed for over a million dollars' worth of Victory Bonds. This is the last week of the campaign, and the time for the real punch. No efforts should be spared to make the campaign a real victory. Ontario totals over one hundred million.

—Box social in Lockerby school on Friday evening, Dec. 7th.

—Continuation School Concert on Dec 20th. Watch for further announcements.

—Mr H. Snider, having severed his connection with the Paisley Electric Light Co, is prepared to take orders for all kinds of electrical work, Supplies, fixtures, etc, at reasonable rates. Apply Box 205, Paisley P. O.

STOCK TONICS

Who'll have a Barrel (100 lbs) of Dr. Hess & Clark Stock Tonic and Worm Expeller at $8.50?

We call special attention to this tonic for hogs. Try it for rapid healthy growth of pigs. It is of great value in warding off disease, expels worms. Other packages—Pails $2.50, 10 lbs. $1.25, 4½ lbs. 65c, 2 lbs. 25c.

Travelled Without License

For travelling a stallion without a license two years from Cargill neighborhood got in wrong and were assessed $20 and costs or about $30 apiece, by Magistrate Tolton in Walkerton on Tuesday afternoon. The cost of an enrolment or license is only $1.00, but these chaps saved this, and spent a lot more settling with justice. Talk about saving at the spittle and waisting at the bung hole, but the woods are full of people who are doing it every day.—Herald and Times.

The AUTOMOBILE

STORING THE CAR FOR WINTER.

The time has about arrived when many motorists will be thinking of putting up their cars for the winter. Persons who live in the city are not troubled greatly by Boreas' icy blasts, for they have the street cleaning departments and heavy traffic to keep the ways open. But motorists who reside in the country or where the winter is long and the snow deep prefer that their cars hibernate when November has slipped by.

In order that the car may be in the best of shape when it emerges from its winter quarters in the spring there are important things that the owner must do preparatory to the final locking of the garage door, according to B. M. Ikert, in Motor Age. If they are not attended to, the careless one will regret it when the spring winds blow and he finds his motor unresponsive to the throttle, finish destroyed, battery ruined or the like.

In spite of all that has been said and written about winter storage there are still owners who let their storage batteries remain in the car in an uncharged condition, allowing the electrolyte to freeze, breaking the plates, jars, etc. The two most important things to look after if you have made up your mind to store your car are the storage battery and cooling system. Therefore it is well to get these in shape first.

How to Proceed

The first thing to do is to disconnect the wires at the terminals of the battery. This is a precaution to keep it from discharging, as any slight leak in the wiring would discharge the battery, and it is very detrimental to let it stand in a discharge condition for any length of time in cold weather. Do not run the engine when the battery is disconnected, for you might burn out the generator if you run it on an open circuit.

If you are not going to take the battery out of the car, arrangements must be made to charge it periodically, either by running the engine and sending a current through it from the car's own generator or by charging from an outside current supply. In any event the job must be done about every six weeks. Before putting the car away see that there is plenty of water submerging the plates of each battery cell. Having added the water, run the car for a mile or so to mix the newly added water with the electrolyte. The solution should be at a gravity of about 1,280 to 1,300 when the car is put away, which insures that it will not freeze under any condition.

Put Battery in Service Station

If the battery is taken from the car store it in a dry place that is free from dust. Dampness will cause corrosion on the terminals and other parts. One of the safest things the owner can do with his battery, if it is not to be used for several months, is to leave it in the hands of a battery service station where it will not be neglected. Here it can be given an occasional charge and kept in condition to resume its work in the spring.

In storing a car select a place that is well protected, offering an even temperature and free from humidity. Never store a car in a barn where horses are kept; the ammonia fumes are detrimental to the finish.

Drain off all the water from the radiator and water ackets and put in a hot soda solution. Leave this in for several hours and drain it off. Then flush the whole system with clean water. To make sure that all the water gets out, run the engine for about two minutes to dry up every particle of moisture. If the hose connections are old, take them off and stuff rags in the radiator openings and jacket flanges.

(Concluded next week).

Food Control Corner

Ninety per cent. of the food consumed in Canada passes through the hands of our women. There is, then, a great responsibility resting upon them to conserve supplies needed overseas and to utilize perishable foods. Waste in all its many forms should be regarded not only as a sin but as actual disloyalty in war-time. It is important that sufficient and nourishing food should be provided, suited to the needs of the different members of the family.

Arbitrary rules in this case are of little value but the principle is of general application, that the women in the homes can do no more important patriotic service than by guarding against waste. The question of substitution is very largely in their hands. A little saving in every home, multiplied by all the homes in the Dominion, would mean a very large amount of food products saved for the soldiers.

You may feel that you do not need to sign the Food Pledge—that you will save all you can without it. But how about your neighbor? The actual pledge may help her to remember the duty of food service. The housewives of Canada, pledged to food service, and living up to their pledges, will be a powerful factor in the struggle against Germany and against starvation.

Announcement is made by the Food Controller that applications for licenses to manufacture oleomargarine in Canada or to import it should be made to the Office of the Veterinary Director-General, Department of Agriculture, Ottawa. Further regulations in regard to the manufacture and importation of oleomargarine are being prepared by officials of the Department of Agriculture and representatives of the Food Controller. Until these are adopted it is impossible to set a date when the licenses will be operative, but notice will be given in the newspapers.

Late pullets are not good. There are a lot of pullets this fall too late hatched to keep for laying, at the present price of feed. Any pullet that is not nearing maturity by November 1 will not pay to hold.

THE FLIGHT OF BIRDS.

French Airman Finds Them at a Height of 6,500 Feet.

An officer of the French Flying Corps has taken exceptional opportunity to record observations on the flight of birds and the height at which they fly, especially when migrating. Some of his notes are published in the Pall Mall Gazette.

Swallows, he says, seem to prefer an altitude of 2,000 feet, whereas the wild duck usually flies at 5,000 feet. They are remarkable also for the marvelous uniformity with which they follow their leader. The turns and twists are taken with such almultaneity that a flock appears to turn and wheel automatically, to accordinarily together do they move. When climbing they fly at about sixty-five miles an hour, and are good for seventy once they have got their height and have spread out to let themselves go.

Last March he met some plovers at 6,500 feet, which is the highest altitude that he has seen a company of birds.

Red Tape.

McDowell had just passed the doctor, and was entitled to be called Pte. McDowell. He was having a look round the camp, which was to be his home for some time. He wanted to enter one of the tents and "pal up" with some one, and he moved towards one of them, and was about to enter when—"Halt!" cried the sergeant. "You can't go in there!" "Why not?" asked McDowell. "It's the colonel's tent!" "Then, what is it marked 'Private' for?"

The present British Parliament has lived longer than any of its twenty-nine predecessors since the Act of Union.

Fish Chowder.—2 cups potatoes (sliced), 1 cup onion (sliced), 1 cup fish. Cook separately potatoes, onion and fish. Combine. Season and reheat with white sauce.

A Canadian forestry officer in France says that every particle of a tree which is cut down is utilized, even to the small limbs, which are made into charcoal and the roots into firewood.

RURAL DEVELOPMENT.

A New Report on Problems of Vital and Current Interest in Canada.

The latest report of the Commission of Conservation deals with the important subject of the planning and development of rural districts and small towns in Canada. It has been prepared by Mr. Thomas Adams, Town Planning Adviser of the Commission, who has made a close study of the problems of rural development in this country during the past three years, following twenty-five years' experience in farming, land surveying and town planning in other countries.

The report deals comprehensively with the social conditions and tendencies in rural areas and the prevailing systems of land settlement and development. It indicates the rural problems requiring solution in order to secure the proper development and economic use of land for purpose of efficiency, health, convenience, and amenity. The great injury which land development in Canada suffers, from speculation, neglect of public health, and want of expert business administration of land settlement, is considered. Incidentally, the problem of returned soldiers is dealt with, and the connection between land development and such questions as taxation, unemployment, and high cost of living is clearly shown.

Having regard to the need for more attention being given to production in Canada; to the extent to which production is impaired by speculation in land, by neglect of public health, and by haphazard systems of development; to the importance of increasing the supply of human skill and energy and of capital derived from production instead of by borrowing; the problems dealt with in this report are of vital and current interest to the people of this country.

There are five appendices by competent authorities, and the concluding chapter gives an outline of proposals and makes general recommendations to cover the conditions as presented.

CHILE DEATH RATE HIGH.

Healthful Country, But Little Attention Paid to Hygiene.

If due attention were given to the most ordinary sanitary principles and hygiene the death rate in Chile would be extremely low in comparison with that of most countries in South America. In physique the Chileans are the most sturdy race on the continent. Living by the seashore or mostly in the open air in the rural districts, a fine, hardy manhood has been developed. The highest death rate is in the towns and cities, where dwelling houses lack the most elementary appliances of sanitation. Smallpox and typhoid are very prevalent, and some years fearful epidemics break out. Pneumonia and tuberculosis are also prevalent.

But Chile's high death rate is mainly accounted for by the heavy infantile mortality from contagious diseases. The birth record of Chile is one of the highest in the world, but the mean rate of increase in population by excess of births over deaths reduces it to one of the lowest in the world. Thus, one of the most healthful countries in the world reduces its increase to a minimum through ignorance, carelessness in the treatment of children and the bad sanitary conditions in the dwellings of the working classes.

Danger of Gasoline.

The increasing use of the automobile has caused many out-buildings to be converted into private garages. This conversion, in many cases, carries with it the storage of more or less gasoline. In almost all municipal regulations this storage is held to be objectionable. It is highly dangerous and constitutes a risk, not only to the garage itself, but to adjoining property. Gasoline will give off 100 times its bulk in vapor, and, when vaporized, will convert 1,550 times its volume of air into an explosive mixture, which will ignite from a blaze or spark. Five gallons of gasoline will generate 8,000 cubic feet of gas, or enough to fill a room 20 by 40 feet and 10 feet high. When ignited, it immediately expands to 1,000 times that space. In a built-up area, this would cause a most destructive explosion, with probable loss of life. The temptation to keep a rather large supply of gasoline on hand is great, and garages should, therefore, be inspected by local fire departments for dangerous conditions.

TANKS WERE USED CENTURIES AGO

RETAIN SOME PRINCIPLES OF BATTERING RAMS.

Combination of Fort and Cruiser Made Possible by Developmeiat of Tractors.

One has to be inside of a tank and feel that strange, gliding motion with which it goes along before he can realize what a tremendously effective war machine it is. And as the slightest stoops within those steel walls he perhaps has a queer feeling of reminiscence, for some ancestor of his hundreds of years ago may have gone to attack walled cities or to bridge the intrenchments of the foe in just such an engine of destruction as this.

The tank, as we call it to-day, retains some of the principles of the battering rams of ancient days. It is not unlike those armored and protected platforms used by armed men of old in overcoming fortress and castle.

Mobile land forts have been used from time immemorial. The tank is fort and cruiser, a combination made possible by the tremendous development of tractors in the last few years.

Development of Tractors.

The English had for years before the world war been using caterpillar trucks in their farming. These machines were first built at Peoria, Ill. They were intended primarily for hauling over rough fields and came to be utilized in harvesting and similar operations.

The caterpillar wheels and belts used in driving these machines were so simple in construction and withstood the impact of shock so well that even before they were used as war machines they were put through stunts of various kinds. Occasionally one would get out of control and crush over fences, thus demonstrating what they could accomplish if such proceedings were necessary.

When the British War Office was casting about for effective weapons for use against the Germans the ingenuity of experts first struggled with devices for silencing machine guns in short order. Col. E. D. Swinton, who is credited with being father of the tank, has had the help of both ancient and modern inventors in designing this most efficient type of armored automobile.

Surprised the Enemy.

The chief value of the tanks at first was the fact that they dawned upon the Germans as a surprise. They were so terrible in aspect and so near to being invincible when they got well started that the hoches fled before them like so many frightened sheep. The veil of secrecy was kept down so tightly that even when the machines were being shipped across the channel no inkling of their existence reached the enemy, as far as is known.

The entrance is through a small door in the lower part of one of the sides. The visitor has to crouch down and crawl through on his belly, much in the same way that the tank gets into action. When he is inside he cannot stand up unless he is very short.

The first impression made upon the beholder is that he is in the hold of some kind of condensed battleship. All about him are pipes and engines and strange appliances. He might think of himself as a dwarf who had got under the hood of a giant's automobile. When the vision clears somewhat he finds that a tank is a model of orderliness. Everything is in its proper place and ready for instant use.

Tanks will stand a prodigious punishment. When they start after a machine gun which the Germans have placed with great care they proceed with ease and comfort through a rain of bullets and in short order get close enough to even the most deftly concealed guns to silence them. A direct hit from an eighteen inch shell would put a tank and all its crew out of commission for keeps, but even "whizz bangs" do not make any great difference.

Efficient War Device.

The men who do the fighting have little to bother them, for it is barely possible even to hear the patter of the enemy bullets in the front part of the tank. The driver sits in the fore part of this landship peering out through a narrow slit and directing the progress with ease. Once a driver becomes accustomed to the surroundings he is as comfortable almost as he would be in one of the sedan automobiles.

The Germans often hurl bombs at tanks, but without much effect. Occasionally they run up over it looking for trouble and if one of them happens to get too near a loophole he is likely to be picked off by a revolver handled by a British officer within, but such excursions over the top are harmless as far as the tank is concerned.

The tremendous power of the tanks can drive them through barbed wire fences, knock down light walls and send them through frames of ordinary houses. It would be an unusual kind of ground indeed on which its caterpillar treads could not find some leverage.

Riding in a tank on level ground gives the occupants the impression that they are gliding softly along inside some kind of dragon. There is hardly any jerky motion on a level road and men who have been in action in the tanks declare that there is not so much vibration as to obtrude itself upon them after everything is warmed up for the fray.

It is always more or less hot inside of a tank in action, for the more speed the greater heat. It is necessary to make the land cruiser go at top speed so as to prevent her from being too easy a mark for the heavy artillery.

THE DOGS OF FRANCE.

Perform a Most Dangerous War Service.

The pound has no more terrors for the dogs of France. For no longer is the stray dog despised and unwanted. The dog army needs volunteers and any intelligent loyal little bowwow may offer his services to his country. At the beginning of the war only certain breeds of dogs were used and those mostly for searching out the wounded and scenting out the enemy. But now all kinds of dogs are being pressed into service and every regiment has its training camp for these brave soldiers.

Theirs is the most dangerous service of all, that of carrying messages from the front forces that are attacking to the artillery and officers in the rear. It is, of course, the practice for the enemy to direct a regular curtain of fire just back of the advancing troops, to cut them off from their officers and guns.

The little four-footed messengers have, to a degree, solved this difficulty, and after being trained and accustomed to shell-fire, they seldom if ever fail to deliver the messages. Many have fallen on the field of honor, and many have received the Croix de Guerre. Every dog who risks his life in these dangerous missions takes the place of a soldier, and every dog who is killed saves the life of a soldier for France. No wonder the country honors and is proud of her war dogs. Theirs is service without understanding of issues, hope of honor or glory; a service that gives all and asks nothing but a little love.

POTASH FROM SEAWEED.

Plant For This Purpose Has Been Erected in British Columbia.

When the war broke out, the fertilizer supply, especially that of potash, was badly disrupted. Until then, Germany had been the principal source of supply. Attention was immediately directed to several possible materials from which potash might be obtained. Among these was kelp, a water-plant growing in great profusion along the sea-coast. Especially is this the case on the British Columbia coast, where, owing to the many indentations, the kelp beds are of large area.

After careful investigation a plant for making potash from kelp has been installed at Pacific, on Moresby island, one of the Queen Charlotte group. It will have a capacity of 1,000 tons of wet kelp daily, and will get its supply from Cumshewa inlet. The kelp is reaped by knives suspended below scows, which cut the standing growth as they pass over the beds. The kelp then rises to the surface, where it is gathered.

The company, in addition, proposes to extract oils from non-edible fish and to make fertilizer from the fish refuse.

Rye is hardier than wheat and will produce a good crop on land too poor to produce oats, barley, corn or potatoes. Rye and buckwheat are good crops to raise on poor land.

"HURRY ALONG TOMMY"

REFLECTIONS OF A BRITISH SOLDIER.

In Khaki He Feels His Self-Respect Secure and Finds Life Agreeable.

"Last evening, upon a wet and lonely road, I saw approaching a figure in oilskins. As the figure swung past me it said: 'Good night, Tom!' To which I made reply: 'Good night, Jack!' My name is not Tom. As far as I am aware, the gentleman in oilskins was not christened Jack. But I was in khaki—a soldier. And he was a sailor. Hence our familiar interchange of greetings.

"I confess I find that sort of episode very pleasant," writes Ward Muir in the London Spectator. "A trifle! But—candidly—flattering. I admit it: these are trifles which make a man walk. To be called 'Chum' by a fellow-soldier on top of a tramcar; to be hailed casually as 'Digger!' by an Australian who wishes to borrow a match; to have a lift-girl in the tube shout 'Hurry along, Tommy!' and favor me with a grin which I should never have won when in civilian garb; to behold a van-driver slow down as to offer me a lift; to sleep in a Y.M.C.A. hut for sixpence, after receiving a cup of tea from the jewelled hands of a Real Lady; to be intercepted by a greybeard Volunteer desirous of directing me through an Underground station whose geography I know rather better than that of my own garden: these occurrences are curiously agreeable.

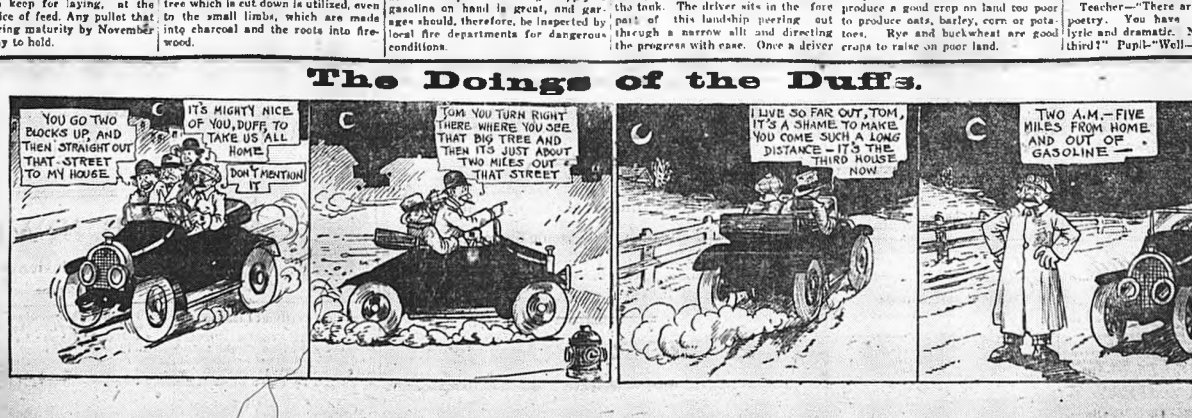
The Correct Dress.

"Even were I able, like some of my privileged superiors, to move about in mufti, I should not do so. Never! My clothes are far from comfortable, at times. The tunic is stuffy. It's continually tarnishing—and therefore continually to be repolished—buttons are an outrage; the hours wasted on metal buttons must stagger the gods. The puttees are (for home service wear) idiotic. The belt is nonsense. The swagger-cane—without which one is 'improperly dressed'; which nevertheless is not supplied by the authorities but must be bought out of one's own pocket—is a silliness. The cap is ill-designed. And yet I am sorry for any man of military age—nay, for any man of any age—compelled to tread the streets in other rig than this, or than its naval counterpart.

"I couldn't show myself in the streets." This is what the soldier says. He envisages the sheer, cowardly iniquitude which would be his lot were he forced to walk the world in a dress other than this safe and calmness-giving khaki. His self-respect is now secure. Without the label which khaki attaches to him he perceives that he would be eternally wanting to stop the passers-by and explain. Besides, no one would call him as 'Chum' and 'Digger'—and when he went a journey he would have to sit up straight and prim in an ordinary compartment and be debarred from the easy comradeship of the one with Troops daubed on its window. We long—oh, how we long!—to get out of khaki. But not yet."

Walking in a Circle.

The reason we cannot always walk in a straight line with our eyes shut is because when we walk naturally the steps taken by our right and left feet are not of equal length. This difference in the length of steps is due to the fact that our legs are never exactly the same length.



We think of them generally as of the same length, but they are not, and this will be proven if you measure them accurately. Now, then, the longer of the legs will always take a longer step than the shorter one, and so if our eyes are shut, we walk in circles, unless we have something to guide us.

When we walk with our eyes open we are able to overcome the difference, but with closed eyes this is impossible except with considerable practice.

Parsley and sweet herbs should be gathered on a sunshiny day when full grown if they are to be dried.

Teacher—"There are three kinds of poetry. You have mentioned two, lyric and dramatic. Now what is the third?" Pupil—"Well—epi—epidemic."

The Doings of the Duffs.

Don't say "Breakfast Food"—say "Shredded Wheat"—for while you no doubt mean **Shredded Wheat**, you may get one of those mushy porridges that are a poor substitute for the crisp, delicious shreds of baked whole wheat—that supply all the nutriment for a half day's work. Two Biscuits with milk or cream make a nourishing meal at a cost of a few cents.

Made in Canada.

THE CRUISER'S BEAR.

Government Surveyors Encounter a Full-Grown Bruin.

In The Log of a Timber Cruiser Mr. W. P. Lawson gives a striking illustration of the dangers that the hardy government surveyors not infrequently face. The crew was running the line down a narrow ravine at one side of the forest boundary. It was late afternoon, says Mr. Lawson —nearly time to knock off work. Conway walked fifty yards or more in advance of the others. Wetherby at the moment, was helping Wallace with the plane table.

At a sudden, unusual sound in the brush to the left, Wallace turned aside to investigate. The next instant he came back at full speed, with his eyes popping and his legs working wildly. Ten yards behind him, snarling and fighting the brush, lumbered a full-grown cinnamon bear. The beast was in a towering rage, caused by a steel trap and eight feet of heavy chain that trailed from his prisoned hind foot. Had it not been for this drag he would doubtless have caught Wallace before he had run twenty feet. As it was, Wallace reached an oak tree a few strides ahead of the bear and "shinned" up the trunk.

When Wetherby saw Wallace with the bear in his wake he at once followed a natural and compelling impulse to climb a tree. Conway, warned by Wetherby, also sought a convenient oak.

But the infuriated bear began to climb after Wallace. Wetherby, the only one of the trio who carried a revolver, immediately left the limb on which he sat and called out to his beleaguered chief, "Sit tight, Wally! I'll be over in a minute!"

To go gunning for an angry bear with a thirty-eight caliber pistol is a risky business. Wallace as well as Conway endeavored to turn Wetherby from the attempt.

"Go back, Wetherby!" yelled his superior, as the axeman approached. "Shoot him from the tree. He'll get you sure now if you wound him!"

"I haven't enough cartridges to waste any," was all that Wetherby replied as he ran under the tree and took careful aim at the beast above.

A shot sounded, and the bear's head snapped to one side as if it had been struck sharply with a club; his great muscles relaxed and he slid scramblingly down with his heavy claws ripping long, deep grooves in the bark of the tree.

Wetherby circled about excited but alert, waiting to put five more soft-nosed bullets into the wounded animal. A moment later he saw that they were not needed. The first ball, entering behind the ear, had penetrated the thin coating of muscle there, broken through the skull and pierced the brain. It was a perfect shot.

"Good shooting, old boy!" cried Conway, as he slapped the delighted marksman on the back.

Wallace's way was different: with a silence more eloquent than a torrent of thanks, he grasped Wetherby's hand and wrung it fervently.

A PENNY PROBLEM.

Uniform Currency and Coinage Throughout British Empire.

Financial experts are concerned about the English penny, says a London paper. Experts in currency reform contemplate an alteration in its value; but the problem is whether the penny is to be worth more or worth a little less.

It is by no means an easy affair to decide. Railway and 'bus people want a new penny which will be worth more, so that they will thereby secure additional revenue without increasing penny fares. If the penny is decreased it will upset their arrangements, for they will lose money unless they increase fares, and they can hardly put on a farthing, and an extra half-penny would place much of their traffic in peril.

As is known, the Dominions Royal Commission advocates a uniform currency and coinage in the Empire, based on the decimal system. The general view is that the sovereign must remain the essential unit, and divided into a thousand parts or mils. This would allow the present shilling-sovereign, florin, shilling, and sixpence to remain, but the copper money would have to be altered. Here comes the point. The penny must either be a four-mil piece, which is 96d., or a five-mil piece, which is 1.2d.

It is a nice problem for financial experts. As a matter of fact, not very long ago the British Government was seriously thinking of minting three-halfpenny pieces.

RHEUMATISM CURED

In the days of our fathers and grandfathers rheumatism was thought to be the unavoidable penalty of middle life and old age. Almost every elderly person had rheumatism, as well as many young people. Medical science did not understand the trouble—did not know that it was rooted in the blood. It was thought that rheumatism was the mere effect of exposure to cold and damp, and it was treated with liniments and hot applications, which sometimes gave temporary relief, but did not cure the trouble. In those days there were thousands of rheumatic cripples. Now, medical science understands that rheumatism is a disease of the blood, and that with good, rich, red blood any man or woman of any age can defy rheumatism. It can be cured by killing the poison in the blood which causes it. There are many elderly people who have never felt a twinge of rheumatism, and many who have conquered it by simply keeping their blood rich and pure. The blood making, blood enriching qualities of Dr. Williams Pink Pills is becoming every year more widely known, and it is the more general use of these pills that has robbed rheumatism of its terrors. At the first sign of poor blood, which is shown by loss of appetite, palpitations, dull skin and dim eyes, protect yourself against the further ravages of disease by taking Dr. Williams' Pink Pills. They have cured thousands of people—if you give them a fair trial they will not disappoint you.

You can get these pills through any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

WAR AND GARDENS.

Horticultural Products Not Always Indicative of Peace and Quiet.

The Bible tells us that all the trouble of this world was hatched in a garden, and certainly more than one war has sprung from the same peaceful retreat. In English history the most famous garden in this connection is the Temple Garden, between Fleet Street and the Thames. There the first act of the famous Wars of the Roses took place.

This war, which lasted thirty years, and included twelve pitched battles, was between the rival houses of York and Lancaster. One day in the Temple Gardens the Duke of York plucked a white rose and called on his supporters to do the same. The Duke of Somerset, who stood for the reigning king, Henry VI., of Lancaster, plucked a red rose and commanded his supporters to do likewise. Thus did these badges become the symbols of contending forces, and when they were combined in the Tudor Rose it became the symbol of unity.

The Man of Serajevo, whose death is costing millions of lives in the present world war, was a poseur of the Kaiser type and reckoned to be very aesthetic. He was supposed to dote on roses, and it was actually in a gorgeous rose garden that, shortly before his tragical death, he met the Kaiser, and amid the perfume of the roses those two arch-scoundrels plotted this war.

And we have it on Mr. Gerard's authority that the seed which grew into the entrance of America into the world war was sown in the shape of a telegram written by the Kaiser "in a little garden, seated under a big umbrella at a small table." So from Eden to Potsdam gardens have not always been fruitful of rest and quietude.

TWO GREAT WORLD GRAINS are combined in the perfected ready-cooked cereal—

Grape-Nuts

This appetizing blend of Wheat and Barley is over 98% Food.

ECONOMICAL. HEALTHFUL. DELIGHTFUL.

COMMUNICATION DURING ATTACK

AN INCIDENT OF THE BATTLE OF THE SOMME.

How Miscalculation on the Part of Range Finders Meant Loss to Attacking Troops.

Communication during an attack is maintained by signal flares, runners, aviators and the telephone, says Captain David Fallon, M.C. Each officer before he goes into action is provided with a Very pistol and colored lights. If the attack is successful and an entrance has been made into the opposing trenches the officer in charge of that particular sector will fire two green lights in quick succession. This signal, seen by the artillery observing officer, tells him that the attack has been successful and that he has now to lift his barrage fire ahead of the advancing troops and so cut off any reinforcements which the Boche commander might contemplate sending up. The gunners then raise their sights a few hundred yards and concentrate their fire on the Boche reserve lines.

Signals of Distress.

Should the attack fail, as often was the case in the early part of the war, when we were outnumbered in arms, men and guns, the officer in command would send up two red lights in quick succession and try to get in touch with the observing officer through runners and the signallers operating the telephone.

During the attack on Moquet Farm in the great Somme battle our artillery was sending over a hurricane of fire and was supposed to be playing its hymn of hate on the Boche lines. But when we reached the opposing front lines we were met with a terrific hail of bullets from machine guns and rifles. Our barrage had failed to reach the Boche trenches through faulty observation and we found the Huns standing in the trenches with their rifles pointed at us. I sent up my two red lights, which were then the distress signal, or S.O.S., and sent back two runners to tell the forward observing officer what had happened, since the signallers carrying the telephone wires had been killed. A shell had fallen among them.

An Unsuccessful Attack.

Most of my men in this attack were killed or dangerously wounded, and how I escaped is still a marvel to me. Seeing the hopelessness of my position I gave orders for my men to change direction half left and man by man to fall back into a disused trench not far away.

Of the sixty men I had taken into that action only two and myself escaped unscathed. Eight had slight bullet wounds, fourteen were dangerously wounded and the remainder were either killed outright or taken prisoners. At night time those that could be moved were sent back to the field dressing station. With a couple of men who had escaped hurt I crawled over the battlefield and rendered first aid to those needing assistance and removed the identification discs and letters from those who had paid the great price for the cause.

PECULIAR IDEAS OF BEAUTY.

Opinions Regarding Feminine Loveliness Vary Greatly.

It is amazing how ideas of beauty vary with latitude and longitude. In Japan, the professional beauty loves to appear with golden teeth; in India she prefers them stained red, but in certain parts of Sumatra no lady who respected herself would condescend to have any front teeth at all. They are removed the moment they appear, and strictly suppressed if they should try again.

In Persia, anything but an aquiline nose is "off." Even quite a decent snub-nose is out of it. But in Uganda a lady is chiefly sought on account of her India-rubber nose. In Japan it must be "tip-tilted," have a heavenly direction, and in Britain any sort of old nose will pass so long as it is not everlastingly poking itself into other people's business.

In eastern countries red hair and warts are in the same category; but coming west as far as Constantinople, where red hair is very uncommon, we find it just as greatly admired, and henna used to make it red if it isn't. In England "Titian red," as it is called, is greatly admired now, and any woman novelist who wants to be among the "biggest sellers" must give her heroine Titian red hair.

Yet in Africa a crop of the blackest, curliest, closest hair imaginable makes a girl the belle of the kraal, especially if she be plump, with piggy eyes, thick lips, a nose like an India-rubber shoe, and a skin that shines like a cooking stove.

In many instances the clearing of trees from a slope has encouraged a washing of soil that not only ruins the slope, but also buries the productive field at its foot, and greatly increases the damage done by brooks at flood conditions.

Scientists have counted 276 spoken languages and dialects in Africa.

Minard's Liniment Cures Distemper.

HOW THEY DIG TRENCHES.

Steam-Driven Ditching Machines Will Be Introduced.

The trenches on the battle fronts in Europe have been dug almost wholly by hand labor. The work, of course, has been of an extremely laborious description. In the aggregate it has doubtless far exceeded the labor that would have been required to dig the Panama Canal with pick and shovel.

It is now proposed to use steam-driven ditching machines, and conserve energy for the business of fighting.

A GRAND MEDICINE FOR LITTLE ONES

Baby's Own Tablets are a grand medicine for little ones. They are a mild but thorough laxative; are absolutely safe; easy to give and never fail to cure any of the minor ills of little ones. Concerning them Mrs. Jas. S. Hastey, Gleason Road, N.B., writes:—"I have used Baby's Own Tablets and have found them perfectly satisfactory for my little one." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

Butterfly Sounds.

There are species of butterflies that produce sound during certain movements. The "whip" butterfly, when it is surprised, opens and shuts its wings in quick succession and makes a noise like the snap of a lash. Some hibernating butterflies, when disturbed, make a faint hissing sound by slowly depressing and raising their wings. The noise thus produced resembles that made when you blow slowly through closed teeth. Other sounds resemble the friction of sandpaper. A large number of caterpillars make sound by striking their heads against the leaf on which they are resting or by swinging their heads from side to side and catching the mandibles in the roughness of the leaf or on the silken threads spun upon it. It is said that a certain kind of chrysalis, when disturbed, emits a slight, sharp chirp or clicking noise.

If you have more preserving jars than you can fill, lend them to a neighbor who will make them work for the nation.

Minard's Liniment Co., Limited.

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of LaGrippe, and I have frequently proved it to be very effective in cases of Inflammation.

Yours,
W. A. HUTCHINSON.

The Prince on Leave.

When the Prince of Wales gains a few days' leave from the Front he leads a strenuous life in London.

Early in the morning, with one of his brothers or another friend, he walks from Buckingham Palace to a West End club, where a game of squash racquets is indulged in. Then comes a rub-down and a swim in a plunge-bath. A walk back to the Palace finds our soldier-prince ready for a hearty meal, to be followed by a series of social engagements.

In a Bond Street tobacco-shop is a line of cigar-boxes marked "Reserved for H.R.H. the Prince of Wales." The smokes are used as gifts to intimate friends.

Minard's Liniment Cures Colds, &c.

Clock Has 52 Dials.

On Beauvais Cathedral there is a clock which is composed of 92,000 separate pieces, having 52 dial plates. This clock gives the time in the big capitals of the world, as well as the local hour, the day of the week and month, the rising and setting of the sun, the phases of the moon and tides, as well as considerable other information.

Pack glass and china in hay that is slightly damp. This will prevent the articles from slipping about.

LEMONS MAKE SKIN WHITE, SOFT, CLEAR

Make this beauty lotion for a few cents and see for yourself.

What girl or woman hasn't heard of lemon juice to remove complexion blemishes; to whiten the skin and to bring out the roses, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way. Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When applied daily to the face, neck, arms and hands it should help to bleach, clear, smoothen and beautify the skin.

Any druggist will supply three ounces of orchard white at very little cost and the grocer has the lemons.

Calves infested with lice do not thrive. Lice are difficult to get rid of when once the barn is infested. Washing the calf thoroughly with a two to five per cent. coal tar disinfectant such as zenoleum or creolin is effective.

MONEY ORDERS

Pay your out of town accounts by Dominion Express Money Orders. Five dollars costs three cents.

Chrysanthemums potted up from beds in the garden should be placed in a shady place for a few days after potting.

MURINE Granulated Eyelids, Sore Eyes, Eyes Inflamed by Sun, Dust and Wind quickly relieved by Murine. Try it in your Eyes and in Baby's Eyes. No Smarting, Just Eye Comfort

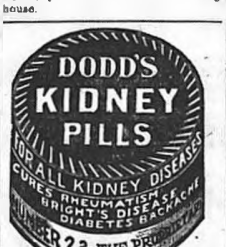
Soils plowed in fall become finer by the action of freezing and thawing during the winter.

Minard's Liniment Cures Garget in Cows.



Orange juice is a preventive of scurvy among children who use pasteurized milk.

WITH THE FINGERS!
SAYS CORNS LIFT OUT
WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.

At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

This Concerns Maple Syrup Makers

Better be on the safe side and place your order now instead of risking disappointment during the March rush. Write for free booklet giving particulars and prices of our "Champion" Evaporator and all up-to-date supplies for which we are headquarters.

THE GRIMM MNFG. CO. LIMITED
58 Wellington St. Montreal, Que.

Rheumatic Aches

Drive them out with Sloan's Liniment, the quick-acting, soothing liniment that penetrates without rubbing and relieves the pain. So much cleaner than musty plasters or ointments: it does not stain the skin or clog the pores. Always have a bottle in the house for the aches and pains of rheumatism, gout, lumbago, strains, sprains, stiff joints and all muscle soreness.

Gorgeous new bottles at all druggists, 25c., 50c. $1.00.

Sloan's Liniment KILLS PAIN

The largest walnut grove in England is at Kempston, near Bedford. It contained at first three hundred and sixty-five trees, one for each day of the year, which were planted about a century ago by the then owner of the farm, who remarked that wars would never cease and the timber would always be wanted for gun-stock.

Minard's Liniment Cures Diphtheria.

Feed and eggs will probably be higher this winter than they have ever been known. More than ever then it will be necessary to make every pound of feed tell in eggs or flesh. To do this, it will require vigorous culling of the flock, good housing and care, and business methods in buying the feed and selling the product.

How to Cure Biliousness

Doctors warn against remedies containing powerful drugs and alcohol. "The Extract of Roots, long known as Mother Seigel's Curative Syrup, has no dope or strong ingredients; it cures indigestion, biliousness and constipation. Can be had at any drug store." Get the genuine. 50c. and $1.00 Bottles.

SKIN TROUBLES THAT TORTURE

and Disfigure Quickly Healed by CUTICURA SOAP and OINTMENT

Such as eczemas, rashes, pimples, dandruff, sore hands and most baby skin troubles.

Sample Each Free by Mail

With 32-p. Skin Book. Address postcard: "Cuticura, Dept. N, Boston, U. S. A." Sold throughout the world.

AN OPERATION AVERTED

Philadelphia, Pa.—"One year ago I was very sick and I suffered with pains in my side and back until I nearly went crazy. I went to different doctors and they all said I had female trouble and would not get any relief until I would be operated on. I had suffered for four years before this time, but I kept getting worse the more medicine I took. Every month since I was a young girl I had suffered with cramps in my sides at periods and was never regular. I saw your advertisement in the newspaper and the picture of a woman who had been saved from an operation and this picture was impressed on my mind. The doctor had given me only two more days to make up my mind so I sent my husband to the drug store at once for a bottle of Lydia E Pinkham's Vegetable Compound, and believe me, I soon noticed a change and when I had finished the third bottle I was cured and never felt better. I grant you the privilege to publish my letter and am only too glad to let other women know of my cure."—Mrs. Thos. McGonigal, 3432 Hartville Street, Phila., Pa.

The Paisley Advocate

PAISLEY, NOV. 28th, 1917

—After being endorsed by his leader as the Laurier candidate in South Bruce, R B Truax wired to Ottawa to say that he did not wish to have the endorsement.

—We are for Union Government under the present conditions because we believe that no single party can successfully carry on our business as it should be carried on. Party government allowed scandalous abuses to arise in both our civil and military business, and it will be well worth trying out union administration if only the patronage system can be eliminated as it has already been proposed.

—A union of both our great parties should free parliament from the domination and influence of the Quebec party, which has held the balance of power pretty well ever since Confederation. First one and then the other has been throttled by the solid vote of the French Catholics, and the leaders are again attempting to get a strangle hold somewhere.

—We can't afford to take chances of the war ending soon, and slow up on the recruiting of our Canadian reinforcements because the news has been better for a few days, and bells of victory have been ringing in old London for the first time since the fighting began. The last available man of all the Allies may be needed even after hostilities cease, to convince the Huns that they should accept peace on any terms that are offered them. The conscription plan is the only way to get more men in Canada.

—The Armenian residents of Guelph had a meeting a few night ago. They met with the conyassers from the Victory Loan committee. They had the message interpreted to them. They were given to understand how much interest the government was willing to pay. Then the Armenians made the astounding announcement that they wished to lend their money to the government, but they didn't want to take any interest on it. The Guelph Mercury draws the contrast between the action of these unchristianized foreigners with the profiteering Davies Co., who want 80 per cent.

—Drastic regulations in regard to fuel announced in an order-in-council passed at Ottawa are now in force. All importers and dealers in coal must be licensed. Heavy penalties are provided for persons doing business without this permit. In regard to profits, brokers must not get more than 30 cents per ton for their services, wholesalers not more than 35 cents and retailers not more than 50 cents. Regarding the hoarding of coal, it is provided that except between the months of April and September, inclusive, no consumer shall obtain any quantity of coal in excess of an estimated supply for the winter with the minimum allowance of their towns. The fuel controller will have full power to requisition any quantity of coal over-supply from any consumer in case of an emergency.

We want to see not only men sent to reinforce our soldiers at the front, but also our great resources of wealth and production lined up to aid in winning the war. We believe that a fair and impartial enforcement of conscription is more likely to be made under union government than under party rule. There's always the danger that the Grit or Tory partizans would be exercising their pull for favors. Men, money and food are all required to keep our forces up to the fighting standard. The working classes and people of moderate mean are the ones who have so far been called upon to pay the extra tax imposed by the war. Those who are making big profits must be compelled to yield up more of the easily earned shekels for the carrying on of the war and for compensation of the soldiers who are facing the dangers and sacrificing their opportunities for position in life if they survive the fighting.

—Private ownership and operation of railways in the United States has broken down in the most helpless and abject manner. Transportation service has only been possible by co-ordination and co-operation under government direction and control. The government is being asked to run the roads and it will soon be asked to supply, directly or indirectly, the enormous sums required for motive power, equipment, replacement work, reconstruction, extensions, betterments, and terminals. It is estimated that to make the railways of the United States into a thoroughly efficient transportation system not less than ten billion dollars should be expended within the next ten years. But the roads themselves can raise little or no money and are staggering under the weight of watered stock and more or less fraudulent bond issues totalling several billion dollars. No other recourse seems open but for the government to acquire all the roads and bring them into one national undertaking. Then the country will cheerfully furnish the money to make that undertaking the greatest transportation system in the world.—Toronto World.

—The number of soldiers procurable by conscription throughout this part of the country is going to be small. Nearly every young man who could be spared had voluntarily enlisted, and so long as it is necessary to keep our production up to a certain standard very few more men can be taken from the agricultural classes. There are some farmers who are doing their level best to really bring all out of the land that they can, while there are others who are not any more concerned about "digging in" than before the war. All those appearing before the local tribunal were advised that of exempted they were expected to do their utmost to raise food supplies.

—Premier Borden has announced that where exemptions are granted wholesale by the local tribunals, the Government will make appeals. This should catch Montreal and any other Quebec centre where the returns are very light in disallowed exemptions. Out of a total of 7,197 cases decided at Montreal in one day, only 235 had been refused exemption. At Toronto the percentage is much higher, there being 688 refusals out of 4,474 applications decided in one day. The Government has set out to give us a conscription system, and they should take every precaution to see that the measure is enforced equitably throughout the Dominion. By latest reports from Montreal it is evident that the authorities mean to corral all the eligibles possible there. Out of a total of 1,292 applications allowed on Friday last 865 have been appealed. It is intimated that all the lists dealt with by the city tribunals will be similarly revised.

—Canada's one business at the present time is to furnish men, money and materials for war. To do this thoroughly and efficiently requires national efficiency in the highest degree. It is for this purpose that the people have brought steady pressure upon the political leaders to form a national government. Now that it has been formed they want action. National Government does two things. It eliminates political division, so that there may be no energy wasted in fighting party battles. It also places in office a government without either a political past or a political future, and therefore without political strings of any nature. It is in this light that the people want the members of the government to regard themselves. If any of them cannot they are out of place in it, and should be pushed out as quickly as possible. They may leave the question of parliamentary support, to the people, who are quite competent to look after it.—Saskatoon Star

—It was no consideration with any of us whether the young Canadians who got into khaki during the past three years were Grit or Tory in politics, whether Presbyterian, Methodist, Baptist or Roman Catholic in religion, or whether they belong to the Orange, the Masonic or any other order. It was enough that they were ready and willing to go forth and fight for their country, their homes, and the freedom of the world from Prussian military oppression. They march off shoulder to shoulder prepared to face any force that is a foe to their country's liberty. But when men of heretofore different political leanings decide that they should be united instead of divided in carrying on the country's business at home, their actions are denounced by some as anything but loyal. They are termed deserters, renegades and bribe-takers by extremists of the old parties. The question is if a man cannot be allowed to follow his own conviction in this land of the free, what is our boasted freedom worth?

From "Bruce in Khaki"

The following appears among sketches under the heading of "The Signals at Home": Walter J. D.—John D's only trouble that he regards as such, is in keeping his red-headed bed partner in his right place at night, for as a rule they rouse the hut in the early hours of the Ack Emma, with their discussion as to who has the most of the bed, blankets, etc. He comes from Chesley, but aside from this is almost normal except in height. Is noted for the box of curiosities he keeps under his bed. Is very unpopular with the shoemakers as he is 6 ft, 3 in., and his shoes are twice that size. Is very healthy especially his appetite which also, is sometimes far from satisfied by army rations. His chief hobby is chewing gum and his favorite author "Old Sleuth" and "Homer." He is a graduate of Paisley and Chesley High Schools and that school so common to the army, the school of practical experience.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel As If Walking On Air

OTTAWA, Ont., Nov. 28th, 1914.

"For over two years, I was troubled with *Constipation, Dyspepsia, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *now I feel fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".

DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

IMPRESSIVE MEMORIAL SERVICE

Knox church was crowded almost to standing room on Sunday evening, when a soldiers' memorial service was held in honor of two of our boys who fell while facing the foe in France—Corp Emerson Pearce and Corp John Hamilton.

All the local ministers took part in the services, two sermons being preached by Revs Crighton and Little, pastors of the Methodist and Knox churches, with which the deceased soldiers had been respectively identified before enlisting. Rev Mr Diehl also made reference to Corp W A Anstead, another of our boys whose memorial service was held on Sunday at Peabody. There were many tearful eyes among the large audience as the speakers paid their tributes to those brave young men who have gone to the soldiers' bourne, or delivered their messages of consolation and sympathy to the sorrowing families.

Corp Pearce and Corp Hamilton were both members of the Canadian Order of Foresters, and Court Saugeen attended the service in a body, along with a number of visiting brethren.

The pulpit surroundings were decorated with flags and rifles.

The choirs of the Methodist and Presbyterian churches united for the musical service and rendered special anthems.

Corp. Emerson A. Pearce
Killed in France, Oct. 26th, son of Mr Albert Pearce, Paisley

THE LATE CORP. J. HAMILTON

Born and raised in Paisley, this soldier lad-lie was known to everybody in town as well as nearly everybody who came to town from the surrounding country. He was the only son of Mr John Hamilton, and was 23 years of age. After leaving school he was employed for a number of years in the butcher shops of Messrs McGregor and Oliaher. He was bright and active in disposition, cheery and friendly with everyone. He enlisted two years ago this month in Toronto, went overseas the following January, and crossed over to France in July of 1916. He adapted himself so well to the work of the artillery that he was awarded stripes and became officer of a "sub"-section of the battery. He was killed Nov 13th.

In the last letter received from him, dated Oct 23rd, the deceased told of meeting with Alex Blue, Sam Tuoke and Pte Hepburn, also his cousin Meredith Reany. The last named was among the wounded on the same date.

The bereaved father and three sisters have the sincere sympathy of all. The mother of deceased died three years ago.

Died Very Suddenly

Mr Wm McFadden, of Port Elgin, was taken ill while attending service in the Methodist church in that town on Sunday forenoon. He was helped out to the entry, and expired very shortly after. Heart failure was the trouble, caused by an attack of acute indigestion. The deceased was a brother of Mr Howard McFadden, of Rhenezer, and well known in Paisley and vicinity, having been employed for a number of years as a blacksmith with Mr H Reed here. He later was in business at Arkwright, and had been in Port Elgin about eight years. He was in his 53rd year, and is survived by his wife, four daughters and one son. He was a member of Foresters' Orangemen, and the funeral on Tuesday was under the auspices of that order.

The Coal Situation

Our coal dealer, Mr D A Lyon, exhausted his supply last week, and having no more cars coming, he went over to Buffalo and spent a couple of days in endeavoring to hustle some shipments this way. He could not get a definite promise for any being consigned to him from that centre before Dec 5th, when navigation closes on the lakes and the embargo on Ontario shipments will be raised. He may have a car of grain also coming forward before that time, but there is nothing definite about the promise. However, after Dec 5th he expects the situation will be very much improved for his customers here. Since coming home he had received word that a couple of cars bought from a Toronto broker will be shipped at once, so that those in immediate need can be supplied very shortly. Mr Lyon states that he would have had a large stock on hand for winter, but could never obtain any more than he had sold ahead at any time during the year. He had forty cars ordered last April, but had to be satisfied with what came, and was told that he was getting just a little bit more than his proportionate percentage of the order filled. While there are many people with only a small quantity of coal in their bins, we do not hear of any that are reduced to the suffering point yet, while in many other places the supply is wholly inadequate to warm up the populace.

Women Citizens' Association

At a meeting in the town hall on Monday afternoon, which was addressed by Mrs W H Becker, secretary of the Ontario Women Citizen's Association, a local branch of that organization was formed. Mrs H B Putnam is President, Mrs (Dr) Allen, Vice-President, and Mrs R Gregg, Secretary. Mrs Becker is a fluent, graceful platform speaker. As we understand it, the object of the Association is to promote legislation that bears upon women's property and voting rights, and a special appeal is being made to stand back of the soldiers who are fighting overseas. The audience was composed of ladies only in the afternoon, but in the evening Mrs Becker was given the opportunity of speaking to the full house at the Marks entertainment. She is a public advocate for union government.

Wrist Lacerated by Saw

Mr Robt McKay, of 6th Bruce met with a bad accident on Monday while helping to cut wood with a buzz-saw outfit at Mr J Ripike's. Mr McKay reached under the saw to pick up a small piece of wood, when the front of his wrist came in contact with the revolving teeth, and was cut into the bone. A large portion of the flesh was torn out entirely, leaving the wrist in such a lacerated condition that the doctors feared that it might not be possible to save the hand, and amputation would be necessary.

BALLACHEY, LAIDLAW & CO.

The Store with the Stock

Special Mention

Raisins and Nuts for Christmas

The New Fruit has now arrived, and for Christmas cookery you want the nicest you can get.

The Canadian Farmer's Real Friend

YOUR letters will be answered, you will get the exact information you need, you will get the advice and assistance you desire free, provided by experts to whom we pay real money for the answer we send you, if you become a subscriber to FARMER'S MAGAZINE. This magazine is for—

The Men on the Farm

Helps them plan, and tells them how to construct barns, stables, sheep barns, hen houses, silos and dwellings.

Tells all about septic tanks, hydraulic rams, water supply and lighting systems, power farming.

Gives advice and information about feeding and breeding and the health of animals; about the business side of farming, co-operative methods, investments and insurance.

The Women on the Farm

Helps them in their home planning and making.

In their kitchen problems.

In matters pertaining to child rearing, their health, rearing and schooling.

Deals with styles, dress patterns and other feminine interests.

Gives help in gardening and flower culture.

Gives news of women's work.

For all it provides, stories, special articles on timely subjects by experts—not amateurs or experimenters; and the latest and most accurate information on every matter of concern to farmers.

FARMER'S MAGAZINE

has three times as many regular departments as any ordinarily found in farm papers, and is about the most satisfying paper you can get at any price. Subscription $1.00 per year.

EVERY issue of FARMER'S MAGAZINE is worth a dollar bill, because it is downright helpful in practical ways. The free advice and information it supplies on request—by private letter—may be worth many dollars. Have the FARMER'S MAGAZINE in your house as you would a hammer or a saw—an ever ready and indispensable help. Have it for its friendship.

The price is One Dollar per year. Bid us send it to you, and money for it when we send you the bill. Address the publishers:—

The MacLean Publishing Co., Ltd., 153 University Ave., Toronto

—An electric light pole at the Teeswater bridge was blown over by a gale last week, and the north end was without lights for a few nights. The large sign at More's drug store was displaced by the wind and in its fall broke telephone and light wires, also nearly struck down a citizen who was passing.

—The Victory Loan! There's a few days yet to buy a Victory Bond and help make the campaign a complete success. This district, canvassed by Messrs D Forrester, R C Pearce and R J Nelson, has subscribed more than the amount requested by headquarters, but the lists are not yet closed. Get in on this safe and loyal investment.

Real Estate Deals

Mr Herman Boettger, who recently bought a farm in Saugeen and is going on the land in the spring, last week disposed of his home in Paisley to Mr Wm Wrightsell of 4th Bruce. The latter sold his 100 acre farm to his brother Herb, who sold a 50 acre lot to another brother Francis. Mrs John McKinnon, Queen St north, has sold her farm on the townline of Saugeen and Bruce to Mr Ernest Porter.

Greenock Boy Missing or Killed

Mr D Woods, of Lovat, received on Thursday last the sad official advice that his son, Pte Thos A Woods, is reported missing and believed to have been killed. The deceased was the eldest son of Mr and Mrs Woods. He left home twenty years ago and went west, and shortly after took up a homestead up Swan River Valley, which he proved up and was working when the war came on. With the continued need for more men for overseas he decided that it was his duty to leave everything and do his bit as a soldier. In February, 1916, he enlisted in December his battalion went overseas, and last June he was on the front line in France. He was 36 years of age. The parents and family have the sympathy of all in their loss.

CARD OF THANKS

Mr and Mrs Albert Pearce and family wish to express their thanks for, and appreciation of, the sympathy extended to them in their bereavement.

ONE COMMON OBJECT! ONE SUPREME CAUSE!

To defeat the Germans and preserve liberty and democracy.

IN FLANDERS FIELDS

Two men were arguing. One claimed he had heard in Calgary the most stirring appeal for the Victory War Loan. The other said he had heard a better—in Sherbrooke, P.Q. A third man, taking his cigar from his mouth, said: "No, the best appeal for Victory Bonds doesn't once mention their name. Listen" and he read from a clipping the poem by John McRae, of Montreal:

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place, and in the sky
The larks, still bravely singing, fly,
Scarce heard amid the guns below.

We are the dead; short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders fields.

Take up our quarrel with the foe!
To you from failing hands we throw
The torch; be yours to hold it high!
If ye break faith with us who die
We shall not sleep though poppies grow
In Flanders fields.

Council will meet again on Sat, Dec 15th, to wind up the year's business.

F W ELLIOTT, Clerk.

NOTHING ELSE MATTERS NOW

The Brockville Times

It would be idle to say that every man who opposes Union Government is disloyal. It is just as wide of the mark to urge that self-interest has prompted Liberals to become members of the Government. But surely a sane appeal can be made to Canadians of all political persuasions to forget party considerations for the moment and to remember the words of a great statesman that "If Germany wins nothing else matters." What will it profit to lick the Tories or to put the Grits in their places; or to elect a Labor man here and there, if the iron heel of a crazy despot is to crush out civilization, force humanity to his whips, replace right with might, and destroy the very principles of Christianity?

Would Hindenburg respect the patronage list, plead with conscientious objectors, repeal regulation 17, grant reciprocity with the United States, give women votes, place the union label on public printing, and otherwise accede to the many demands for reform that fill the Canadian political atmosphere? Would he? Ask the women of Belgium, who have been outraged, whose children have been dismembered before their very eyes, whose husbands have been shot, whose daughters defiled and sent into slavery. Ask Canadians who have seen their comrades crucified. Ask the crippled shoemaker of Zabern, struck down by the sword of a Prussian, followers of the Divinely appointed Kaiser. Ask the massacred Armenians. Is it by chance that the whole Western Continent is arrayed against Germany? Surely there is cause for those who wish to breathe the air of freedom to come together to destroy for all time the last vestiges of enthroned militarism.

—Before anyone can manufacture, import or sell oleomargarine in Canada a license must be procured from the veterinary director-general, Department of Agriculture, Ottawa.

BOVRIL

Repels Colds, Chills, and Influenza

Their Wedding Eve

By Harold Carter.

(Copyright, by W. G. Chapman.)

Nina Suffitt sat in her bedroom and cried over a letter.

It was nine in the evening. On the morrow she was to become the bride of an Englishman. Viscount Addisleigh was a very estimable young man, very shy, and obviously half in love with her. But both had been designed into the marriage.

The days had gone so fast since the engagement that Nina had had little time to regret. It was not until Jack Tremont's letter came that the flood-tide of memory came sweeping back on her.

Five years ago they had been all but engaged. He was a poor artist then, and there had been a terrific scene when her stepmother learned of her friendship for the young man, and of the little suppers at Renti's, where they had had such gay parties of young Bohemians. It had been a glimpse into the wonderful world for the girl, which closed down abruptly when she had not the strength to go her own way.

She had not seen Jack since that last parting, when she had promised to write to him. And all that was five years ago.

Her father's death had followed. Her stepmother, a worldly woman, only wanted to get the girl off her hands. She had been tossed shamelessly in the foreign markets—that was the way with her set—and finally the viscount, with an impoverished estate, had bargained for her. At least, not he, but the family lawyer. All had been very decorous, and—well, Nina was to marry him on the morrow.

She read her lover's letter again through blinding tears. It was only a little congratulatory note, saying that he was dining alone that night at the little table in Renti's, which they used to occupy, and that he would be remembering her.

The house was very quiet. Everyone had gone to bed early in anticipation of the exhausting events of the morrow. The girl peeped out of her room. How easy it would be to escape for an hour or two, to fly to Jack, to spend one last short hour with him, before the drab life ahead of her began!

She trembled; and then, with those memories of the past, she could resist no longer. She slipped on an old dress and hat and coat, and softly made her way down the stairs. She shuddered as she saw the roses that had already been entwined along the banisters, heralds of a joy that was never to be hers.

Half an hour later she entered Renti's. And her heart leaped as she saw the well-remembered figure, solitary at the far table among the lights, in the midst of the gay crowd. And the years that were past seemed like a dream to her.

He did not even start when she approached him, threw back her cloak and sat down facing him.

"Nina, I dared dream that you would come to me," he said. "I willed it with all my power."

"I had to come," answered the girl. "I could not start on my new life after I got your letter without letting you know—"

"What?" he asked gravely.

"That I loved you in the old days," she answered. "I should not be saying this, but my marriage is not of love, on either side."

"And you will go through with it?"

"Yes," she answered.

He looked at her in approbation. "You never were a quitter, Nina," he answered.

They dined together. It was as merry as in the old days, for they resolved to banish all care or remembrance of the present evil from their hearts. And he told her of his success, and of his friends; some married, one dead, one travelling abroad. After the meal he lit a cigarette and they sat closer together, heedless of the passage of time.

"I am glad to have seen you, Nina," he said at length. "We had a good time together. This will refresh my memory to carry it with me the rest of my days."

She looked at him inquiringly. "Do you mean to say, Jack, that you still care as much as that?" she asked incredulously.

He nodded. "But it's all right, my dear," he answered. "The time to fight was five years ago. I lost you then—I deserved to lose you."

She was thinking very hard. The incredible thought went through her mind that if she stayed here, if she just stayed with Jack, whom she loved, nothing could ever harm her, nobody would ever know. If she stayed—

She glanced at the clock, and was horrified to see that it was midnight. She sprang to her feet in alarm.

"I must go, Jack," she said.

He conducted her gravely from the restaurant. They were the last to leave. The yawning waiters watched them reproachfully as they went out. The street was brilliant with revolving signs. Crowds hurrying from the theatres blocked them. There came the sound of music from the restaurants, and the voices of the diners.

"It was happy," said Nina wistfully.

"Yes," he said. "I shall see you to your door, Nina."

She looked at him in alarm. "No!" she said. "I must go in softly, Jack.

Her Heart Leaped as She Saw the Well-Remembered Figure.

I must steal in. I can get on a car and then get off in front of the house."

He took her hands in his, and at the very last he lost his self-control.

"Stay with me, Nina," he whispered. "Stay! You have no one you care for. Be my wife. I can't lose you now, Nina. Will you?"

The temptation was terrible. She fought it down silently before she could answer.

"Only Jack, that I never was a quitter, as you said," she answered. "It wouldn't be honorable—that's all."

He let her hands go, and she turned away. Then a newsboy came racing along the street.

"Great fire!" he yelled. "All about the Suffitt fire!"

The headlines made her reel. She snatched a paper from the boy's hand.

The Suffitt house was blazing. The fire engines were unable to control it. The entire block was threatened."

There was no further word between them. She sprang on a car and Jack took his seat beside her. But many yards from the house the cars were blocked in the jam.

The house was a blazing ruin. Men were searching within it vainly for her. Nina heard the words that passed among the crowd. "All safe but the bride!" "No chance of finding her now in that furnace!" "Poor thing, and on her marriage eve!"

She reeled into Jack's arms. Unrecognized in the crowd, she fought out her problem. If she were dead—all would be well. The viscount, honorably released, as herself, her cold-hearted stepmother, hardly distressed—

She clung to her escort's arm. "Jack, take me away!" she wept. "Take me away. I will go with you now. My past life lies buried—somewhere in there!"

The most singular of all created animals is the duckbill, an aquatic, egg-laying mammal about 18 inches long, exclusive of the tail, which is six inches long, with a body somewhat like that of an otter, and found only in Southern and Eastern Australia and in Tasmania. The body of the Duckbill is covered with short, close fur with a woolly underfur. The mouth has horny plates instead of teeth.

Eighteenth Lesson.—Various Cuts of Beef.

THE PRINCIPAL CUTS OF BEEF

The beef is split into halves; it is then divided into fore and hind quarters, and as follows:

NECK—The neck is used for stewing, soups, beef tea and corning; requiring long and continuous cooking.

CHUCK—Chuck and crosscut is also called the Boston and English cut. It is used for roasting, pot roasting and braising.

BOLAR CUT—A steak may be cut from this cut of meat. It is used for pot roasting and braising. By slow cooking this meat is made delicious and tender.

SHIN—Used for stews and soup making.

BRISKET—Used for stews, soup making and corning.

RIBS—Used for roasting.

PLATE—Used for stews and soup making.

SIRLOIN—Used for broiling.

FLANK—Used for stewing.

RUMP—Steaks from the rump are used for broiling and pan-broiling. The back cut from the rump is used for roasting. The pin bone is the face cut from the rump averaging from six to eight pounds.

ROUND—The meat is so called because of the way in which it lies on the block. The upper or top of the round is the inside of the leg. This is the tenderest portion. It is cooked by broiling or panning. The back cuts are used for Hamburg steaks, pot roasts and corning. The lower part of the round is the outside of the leg. The first few steak from this portion are tender; the rest is used for Hamburg steaks, stews and pot roasts.

MUSIC IN THE HOME

The Metronome. A Drill Instructor.

"When I see a boy or girl practicing with a metronome on the piano it always reminds me of a policeman on duty at a birthday party," a lady was overheard to say to a friend at a house party the other evening. But that is a severe remark to make. No one would unduly restrain those in attendance at a birthday party from enjoying themselves. That is what the party is for.

The metronome is more like a drill instructor. Off duty he allows the soldier certain freedom, but on duty exactness is demanded. The click of the pendulum is the command for strict time. The metronome shows no favoritism. Whether it is keeping time for a march, a waltz, a sonata, or the faltering attempt of the young beginner's exercises it is absolutely impartial, though it never scolds nor praises. And that is the secret of its success. Having no prejudices in favor of or against anyone it always performs its helpful mission fairly and justly. But like other good disciplinarians it is not always a welcome friend. Some folks dislike working under exacting foremen. If the war has taught one thing it is the necessity for discipline and the principle holds good in music. So make the acquaintance of the metronome. Get friendly with it. Realize that it always metes out justice and your fear will be dispelled. Besides you will be the gainer. Its demand for strict time is all for your benefit.

About the only criticism one ever hears directed against the metronome is not against its character, but its physical appearance, viz., that in contrast to the graceful lines of the violin or the harp or the piano the outline of the metronome is stiff. As one musician puts it, the design is cold and unsympathetic. But at heart the metronome is kind for it serves a helpful and unselfish purpose.

THE MIGHTY PEN

That an army of 25,000,000 people is armed with fountain pens is the amazing fact brought out in a recent issue of The Pen Prophet that gives a present day emphasis to Lytton's "The pen is mightier than the sword." And this great army is growing at a tremendous rate. 3,000,000 recruits were added last year by the Waterman Ideal alone. This growth is all the more striking when it is considered that just 34 years ago Lewis Edson Waterman, a native of Decatur, N.Y., began making fountain pens by hand in a little shop behind a cigar store in New York City. His output was 200 pens a year.

GRASSHOPPER CAN SWIM.

African Specimens Travel as Far as Canary Isles—Rest on Waves.

The grasshopper would seem to have nothing in common with the sea-gull, yet they have been picked up in swarms at sea, in some cases no less than 1,200 miles from the nearest land.

The African grasshopper has been known to cross the Red and Mediterranean Seas in destructive numbers, and even to fly to the Canary Islands. For the most part they are of a migratory species noted for its great flights. The bodies are about four inches long, and are equipped with large air sacs in addition to the usual breathing tubes. These sacs buoy up the insect so that it is able to stay in the air for days at a time, exerting practically no effort at all. During flight its speed varies from three to twenty miles an hour. When it is tired it rests on the water and is borne along on the waves.

18,000 Miles For Two Cents.

This is what the Post Office did for a penny in order to deliver a letter to a soldier:

Sent it first to the Topographical Section, B.E., East Africa.

Forwarded it to Dodoma, 100 miles inland.

Transmitted it to the Military Hospital, Capetown.

Sent it back to home address.

Forwarded it to a camp in England.

Returned it home again.

Delivered it at Carnlough, Antrim.

The letter, posted in January, was received in August, and Mr. R. Martin, Woodvale road, Belfast, who has forwarded the envelope for inspection, estimates that it has journeyed 18,000 miles. Back and front the envelope is covered with addresses.

Architects who inspected the old walls of the Palace of the Louvre discovered that re-enforced concrete was known and used in Paris in the sixteenth century.

250 Seems a very large number of cups to get from a pound of tea. But that proves the fine quality of Red Rose Tea, which goes further and tastes better because it consists chiefly of rich, strong teas grown in the famous district of Assam in Northern India.

A pound of Red Rose gives 250 cups.

Kept Good by the Sealed Package

SMASHING A SUBMARINE.

Newest Contrivance is a Bomb Attached to a Float.

The newest contrivance for smashing a submarine is a bomb loaded with a huge charge of "T.N.T." and hanging from a float.

Suppose the "sub" to be located while travelling under water, by observation from an airplane or balloon. Seen from aloft it is a moving shadow resembling a gigantic fish.

Under such circumstances, of course, it is blind. It does not know that danger threatens. But meanwhile the patrol boats gather and prepare to do some fishing.

The U-boat, under water, cannot travel faster than twelve miles an hour at the utmost. Very likely it is going at a much slower rate. To drop a bomb in front of it is an easy matter.

The bomb is attached to a float by a wire of any desired length, say fifty feet, if that be the supposed depth at which the "sub" is moving. When it has sunk that far the resistance of the float yanks a plug out of it, thereby causing it to explode.

This idea was originated by Sperry, he American inventor of the gyroscope stabilizer. It is thought to have important advantages over the method hitherto used, whereby bombs equipped with delay-action fuses were dropped in front of the submarine.

Bombs of the latter kind are liable to go off too soon or too late. In either case the submarine escapes damage. But the bomb with a float is bound to explode at the required depth, and it will inevitably smash the U-boat if dropped at the proper moment. It does not need to hit the "sub"; the load of high explosive it carries is so big that if it bursts anywhere near it will do the business. At the very least it will fetch the submarine to the surface, to be promptly dispatched by gunfire.

The Jordan Valley

In Southeastern Oregon is a beautiful, fertile district that you ought to investigate. Many shrewd farmers are hereby there, harvested their first bumper Beveridge! Into those that government will pay big returns from the natural harvests in the value of the land alone, to say nothing of the big crops that they can produce. Prices low; terms easy.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

What avail the largest gifts of Heaven, when drooping health and spirits go amiss.—Thomson.

BABY'S CLOTHES.

At the first year. At about the first year the child will begin to stand, and he must have shoes to support his ankles. Rompers will give him freedom and save on the laundry. As soon as he is sufficiently trained (about eighteen months) drawers should be worn.

Laced shoes are best for a walking child; but cannot be produced for a small baby. When out of doors in winter the child should have his ears well covered, and a bonnet with an interlining should be used. A thin sweater is a very convenient garment to use under the coat on very cold days. The child should never go out when the thermometer is under 15 degrees F. A fine piece of cheese cloth may be made to fit the baby carriage, fastened on the hood; and this will guard against dust and high winds.

The out-of-door clothing is dependent entirely upon the season of the year and with the sudden changes which take place in the climate definite rules cannot be laid down. Mothers are obliged to rely upon their own judgment, or that of experienced friends. As a general proposition it may be said that infants are very apt to be overclad, particularly during the hot weather.

QUESTIONS AND ANSWERS.

Appendicitis.

I have seen 2 doctors; both tell me I have appendicitis and one tells me I must be operated on. Can I be cured without an operation? It pains me only at odd times and generally at night. I drink 9 or 10 cups of tea the day, besides about as much water. I have also varicose veins. And I am constipated all the time.

Answer—The excellent physicians who examined you would be far better judges than I, and I would be presumptuous indeed to advise in the circumstances. On general principles, however, operation is decidedly indicated in such a case as yours. In chronic appendicitis the local condition is like so much dynamite in the system, ready to explode on the occurrence of any strain or dietetic indiscretion. Possibly the other ailments you mention may be much improved in consequence of the operation. The Tannic acid in the tea is very binding. Of course you are drinking too much of that fluid. 7 or at most 3 cups the day are right and should be your limit. 6 glasses of water the day are enough.

Cold Hands.

I am having quite a time to keep my hands warm. In fact I feel cold all over as soon as damp weather sets in.

Answer—Cold hands (and feet) with or without sweating, if persisting several months, are due either to nervous fatigue (neurasthenia), anemia (poor blood), hemorrhage, chronic digestive disturbances, rheumatism, gout, or heart or lung affections that may interfere with the right circulation of the blood. Many nervous people get cold extremities suddenly and temporarily by reason of excitement or anxiety or shock. There are those who will complain of cold extremities, which are nevertheless warm to the touch of another person. Doctors call this paræsthesia, and it is a nervous condition. Your doctor should examine as to which of these causes obtains in your case and proceed accordingly.

On Winter Nights.

Don't close your window top nor bottom at night because you are cold, but learn to keep warm with it open. First arrange your room so that you do not sleep in a direct draught, but if that is impossible, a simple device may be used. Cut a heavy piece of cotton six inches longer than the width of the window frame and eighteen inches wide. Tack it along its lower edge to the window sill and hook the upper corners to the window frame. The window may then be opened wide, but the current of air will be directed upwards. In the daytime, the shield may be unhooked and dropped.

Equally important is the bed. A thick mattress and pad should be sufficient under the sleeper, but if the mattress is thin, place heavy wrapping paper under it. Flannelette sheets may be used in preference to cotton. The lighter the top cover the better. If down or lamb's wool are too expensive, a quilt made of two layers of flannelette with an interlining of newspapers will prove an excellent covering over the blankets.

For the outdoor sleeper a Klondyke bed or a sleeping bag is necessary. The Klondyke bed is made by tucking the blankets under the mattress-pad at foot and sides, and binding the whole securely by tucking the top covering twelve inches under the mattress at foot and sides. For stormy weather a horse blanket or quilt with a canvas cover makes an excellent protection. Sleeping bags may be bought at any department store, but a satisfactory one may be made at home from a large quilt or blanket, or from a quilt made from flannelette with newspaper interlining. The bed should be heated by hot water bags or hot water bottles before entering it, and the covering must not be so tight that the feet are uncomfortable. Place two pillows in the form of a V, allowing the head to rest in the angle. The pillows will protect the shoulders. Do not pull the covers over the head. Sleeping helmets may be bought, but a good imitation can be made from a wide toboggan cap pulled out to its double length. Open one end, allowing the cap to pull down over the head, and cut an opening large enough for the eyes, nose and mouth. A comfortable hood may be made from any soft woollen material cut after the style of a sunbonnet.

The British naval boot is of a light pattern, owing to its being chiefly used for deck duties.

MAKING BUTCHERING EASIER

Methods That Take the Drudgery Out of Hog-Killing Time.

By Mrs. L. E. Armour.

When we butcher hogs we prefer a clear, cool day, with the wind from the north. All necessary preparations are made beforehand as much as possible. If a number of hogs are to be dressed, they are not all killed at the same time, as standing seems to impair the flavor, but to make good time we aim to have one ready for scalding as soon as the one before it is finished. A small amount of lime added to the scalding water will not injure the meat in any way, and it makes the hair slip much more easily and the skin is whiter.

The carcasses are pulled from the scalding barrell and put on a long platform which is a little lower at the end farthest from the barrel. This lowering of one end gives the water a chance to drain off, and the hair and scurf is more easily cleaned from the platform. The best procedure in removing the hair is to begin on the head and feet. These are the hardest to dress properly, and when they become cold they are an almost impossible task.

Avoid Heavy Lifting

Every advantage of heavy lifting is taken. We do not try to lift a heavy hog on the pole in the old way. Our method is simple. The carcass is rolled from the platform on to a strong chair. Two men can carry a very heavy hog in this manner. The hog may now be taken with a minimum of effort to the place where it is to be hung. A number of devices may be employed to save the heavy lifting. The gambrel stick may be slipped out of one leg, put around the pole, and reinserted in its proper position. Then it is easily possible to push it up to a notch cut in the pole, which is used as an inclined plane. A block and tackle may be tied to the limb of a tree and the gambrel stick tied to the lower pulley. If a pair of pulley-wire stretchers are handy, they are the best, as they have a patent grip that holds the hog securely at any height. Now we are ready to dash cold water over the body.

We remove the entrails next, being very careful all the while that they be drawn intact. We place a stick between the ribs to hold the sides apart, rinse out with cold water, and we continue with the others until they have been brought to the state of the one described.

It is time to begin cutting and trimming the first when the last hog is dressed. Hams, sides, and shoulders are trimmed to the desired size and carried to the smokehouse, where we spread them singly on shelves and sprinkle them with salt. Heads are soaked in water to remove the blood, and handled in the same manner.

Skins should be cut from the pieces that are to be used for lard, and all lean taken off for the sausage. The skins are cooked alone. The lard fat is cut into small pieces and the sausage meat into chunks for grinding.

Recipes For Brine

Here is the brine we use for 100 pounds of meat: Salt, eight pounds; saltpeter, pulverized, two ounces; brown sugar, two pounds. Dissolve in six gallons of water.

This brine is placed in the kettle and brought to the boiling point, and cooled overnight. Then when the meat is placed in a clean barrel, joints first, the solution is poured over it and a clean cloth tied over the top of the barrel.

The lard fat is placed in the kettle with just enough water added to keep it from sticking. Stir it constantly, and add fire sufficient to keep it cooking. We bring our sausage out by the fire and grind it while we render the lard. Use only a good grade of pork for sausage. Three pounds of the lean to one of the fat is near the right proportion. The combining should be done before the grinding, as the grinder gives a much more thorough mixture than can possibly be made by hand. Most good sausage makers put the meat through the cutter the second time. At the second grinding the seasoning may be added. For four pounds of meat the following is the proper amount of seasoning, although it will be best to add or subtract to make it suit your own taste: One ounce fine salt, one-half ounce of black ground pepper, and one-half ounce of powdered sage. If the red color of the meat is desired a little saltpeter will keep it.

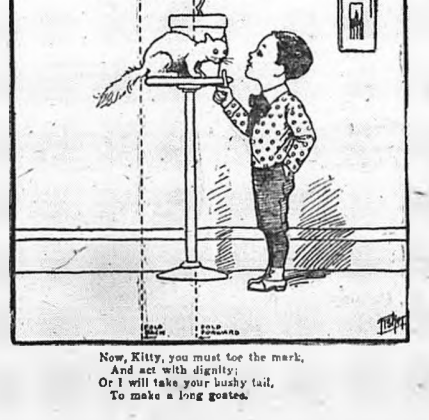
Making Sausages

Sausage for immediate use may be packed in crocks and jars. A very good method is to pack the jars tightly and set in an oven and heat until enough lard has run out to make a covering over the top. Expert sausage makers advise covering the jar with cheesecloth and pouring melted paraffin on the cloth to fill up the pores. It is no trouble to keep the sausage for months this way. Always keep in a cool and dry place.

Then the casings may be used as a container. They are the small intestines of the hog, and have been thoroughly cleaned, washed, and scraped. A special stuffing machine is used to pack the sausage in them. My own favorite way is to pack the sausage in muslin bags. It seems better if it is dried a while, and after the drying we pack it away in crocks and cover with lard. Mixed sausage is made by allowing one pound of lean beef and one pound of fat pork to two pounds of lean pork. It is handled the same as pure sausage.

In making scrue or hog-head cheese, one head should be used with about twelve feet. Boil them together until they are perfectly tender, and remove the bones. Mash the meat thoroughly, and season with salt, pepper, and sage. Store in a deep pan or crock until well cooled, and then it may be fried, or sliced and served with vinegar, as desired. Liver cheese is made in the same way, using three livers, one head, and eight feet.

To Prepare Livers



At butchering time there is so much fresh meat and "bones" that we seldom eat all of the livers. The French in Louisiana have the following way of taking care of it, and it is an extremely appetizing food when rightly prepared and served: Cook as many livers as desired, boiling until perfectly tender. Mash well, add salt, pepper, sage, minced onions, or garlic to suit the taste. Add one third as much rice that has been thoroughly cooked and seasoned. Stuff it in well-cleaned paunches and hang to dry. It should be smoked a little with cobs or hickory wood. After the smoking operation it is sliced and fried.

Backbones and ribs, if unsalted, can be hung in the smokehouse in fly-proof sacks, and will not taste old for several days. After we have left our meat in the brine from three to five weeks—the colder the weather the longer we leave it—we smoke it over a hickory fire and pack it in rat-proof receptacles, placing corn husks between the layers.

Preserve Your Shoes.

Shoe trees will help to keep the shoes in shape. Frequent cleaning and shining will help keep the new finish. New laces every now and then or fresh buttons will help to keep the nice new look. Don't sit on your feet and don't scrape your toes. Wear rubber heels and change them when they get run down. Never dry your shoes in an oven or on the radiator—this makes them stiff and unshapely and uncomfortable, and you run the risk of burning the leather.

A simple remedy for worms in hogs is a mixture of wood ashes, salt, and air-slaked lime, mixed about equal parts. It will not do the hogs any injury if allowed to eat all they wish. This mixture will also help to tone the system.

Now, Kitty, you must toe the mark,
And act with dignity;
Or I will take your bushy tail,
To make a long goatee.

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

C.B.—1. Is it possible to treat seed corn so as to keep crows from destroying it? 2. How can one exterminate wild carrots? 3. What would be the best seed to sow in the spring to produce a small crop of hay next year?

Answer:—1. In order to control the attack of crows on young growing corn, it is well to dip the corn in tar, by putting it in a kettle and then applying the tar to the corn, keeping the corn stirred. Just enough should be used to make a very thin covering of tar over each kernel. A tablespoonful should be sufficient to treat six or eight quarts of seed corn. It is good practice to dry the excess tar by the addition of some dry road dust or lime. This will prevent the seed sticking. 2. Wild carrots can be exterminated by cultivation. This weed yields readily where care is taken to prevent its seeding. 3. Probably the best you can do to get a hay crop from spring sown seed, would be to sow a mixture of peas and oats, a bushel of each to the acre. These should be cut just before the oats begin to turn color, at which time the pea pods will be fairly well filled, and the mixture should make nutritious hay.

Reader:—I wish to plant an acre in strawberries in the spring. Can you give me advice regarding cultivation as this work is new to me. Soil is good clay loam.

Answer:—In preparing a strawberry patch next spring, the ground should be worked as early as possible, and the plants set in rows three to four feet apart, and from one to two feet apart in the rows. Successful strawberry growers apply from 300 to 600 lbs. of fertilizer to the acre, in preparing a suitable bed for the strawberry plants. This can be sown broadcast over the ground and worked in by carefully harrowing or raking the ground. Fertilizer, on a fairly rich clay loam soil, should analyze about 2 to 3 per cent. ammonia and 8 to 12 per cent available phosphoric acid, and possibly 1 per cent. of potash. During the first season the blossoming stalk should be pinched off and the runners should be trained along the row, not spreading more than a foot wide on either side. During the first season the strawberries should be frequently worked, rather deep at first, but shallower as the season advances, rarely exceeding a depth of 2½ inches. After the ground has frozen it is good practice to cover the plants with straw or other mulch which can be removed in the spring.

R.S.:—1. Will you give me particulars for treatment of barley for smut? 2. If I sow sweet clover with a nurse crop next spring, how long will the plants last? It is a biennial, I know, but does planting with a nurse crop make a difference? 3. Should a wooden silo built of yellow pine be painted on the inside as well as the outside? Is it necessary that silos with cement floors have a hole left in the centre for drainage?

Answer:—1. In order to treat barley to control smut, take a barrel holding about 50 gallons of water. Add one pint of formalin to approximately 40 gallons of water. Mix this thoroughly, then dip the bag of barley seed into this mixture until it is completely submerged. Raise the bag until it has drained out and then resubmerge. Afterwards lift the bag up so that the solution drains back into the barrel and empty the sack onto a clean floor, covering the barley so treated with sacks or covers. Leave these on over night; so as to keep the formalin gas in among the kernels as much as possible. In the morning remove the bags and the gas will quickly escape. 2. If sweet clover is sown with care and the ground is well prepared and rich, it will last for several years. Planting it with a nurse crop makes no difference as to the longevity of the clover plants. 3. Painting the inside of the silo will tend to preserve the wood. This painting is not as necessary as that of the outside, since the outside painting protects the silo from weathering. It is good practice to have a hole at the bottom of the cement floor silo. This hole should lead off into a drain, but of course should be closed before the silo is filled. Quite wire sin will get into the silage by the avenue and destroy much of it. The drain at the bottom of the silo will allow for enough cleaning out of the silo.

The Dairy

Less Grain For Live Stock.

It is time to do away with extravagance in feeding grain to stock. The fact that grain is commanding enormous prices is sufficient reason why its use should be limited. Profitable production of meat and economical wintering of breeding animals without the necessity of a large amount of grain in the ration, is an added reason why its use should be curtailed.

In the dairy barn, roots, or forage crops such as alfalfa, clover, soy-beans and cow-peas, may partly take the place of grain. The best feed to use as a partial substitute for grain is silage. For all practical purposes, a balanced ration for an average cow giving fifteen to eighteen pounds of milk is about fourteen pounds of alfalfa hay and thirty-five pounds of corn silage. No grain is necessary for that production. A pound of cottonseed-meal fed on the silage will furnish the necessary protein. A cow producing more than eighteen pounds of milk will need grain, the amount depending on the quantity of milk.

In the feed lots the most economical gains on steers and lambs are secured when silage and alfalfa or clover hay are used largely in the ration. Some being fitted for market can not consume any large amount of roughage, but brood sows relish alfalfa hay, and its use insures strong, healthy litters. Fillies and weanling colts utilize alfalfa hay advantageously. While mares in foal may be wintered on that ration alone. Breeding cows that enter the winter in good shape can be carried until lambing time without grain, provided they have a good supply of well-cured alfalfa or clover hay and some silage for succulence. It is imperative to feed neither moldy silage, nor silage made from corn cut too green.

The stockman who, in a panic, sells out at this time will not only lose money on the disposal of farm roughages, but will lose in soil fertility and will eventually be compelled to restock at prices as high, or higher than now existing.

Hogs

Pork Without Corn.

Corn is not absolutely essential for pork, and other feeds may be profitably substituted for corn. Their use must be determined by their availability, cost per pound, and relative feeding value. Crushed oats can be substituted for corn to the extent of two-thirds of the ration, when the cost per pound is two-fifths less than that of corn. Barley will take the place of corn altogether when the cost is the same per pound. Rye, at nine-tenths the cost of corn, and frosted wheat at the same price, will take the place of corn. When ground and fed as a meal, the grain sorghums will displace corn in the ration if a trifle lower in price. The same is true of millet when one-fourth cheaper, hominy feed when one and one-seventh the price of corn, and wheat shorts when one and one-tenth the price of corn per pound. Millet can not be fed alone, but with a protein supplement. Rice bran can be used when one-tenth cheaper than corn, no protein being needed. Barley feed, which has about the same feeding value as a mixture of wheat bran and shorts, can replace corn-meal when costing the same. Millet, oat, beans and rice bran tend to produce soft pork if fed too extensively.

To stop leakage through concrete, such as tunnel walls, clean the wall thoroughly and paint with a solution consisting of eight and three-quarter pounds of zinc sulphate dissolved in a gallon of water. The zinc sulphate will act on the lime in the cement, forming insoluble calcium sulphate and zinc hydroxide, which fills up the pores in the concrete.

Poultry

How To Make Successful Hatches

Weak chicks are caused by the same things that cause a poor batch, says a successful poultry woman. I keep my tray filled with hatchable eggs by testing them before putting them in the machine. There are many imperfections on the inside of the shells, and in the egg itself, which are impossible to detect without the magnifying lens. I test again in thirty-six hours, taking out all infertile eggs before they are injured. I try to keep my lamp clean and well trimmed, and use the very best oil. I keep the temperature at from 102 degrees to 103 degrees the first two weeks, from 103 degrees to 104 degrees the last week, and never exceed 104 degrees at any time. No moisture is used, except that which the incubator provides, until the hatch is well advanced. Then a wet, warm towel is laid over the eggs if necessary.

I am constantly on the lookout for dead germs which, if permitted to remain, will spoil the hatch by poisoning chicks that otherwise might have been strong and healthy. A dead chick in the shell will have the same effect on the good eggs in the incubator that a decayed apple would have in the midst of good ones. They throw off a poisonous gas which is responsible for many chicks being dead in the shell at hatching time. This also causes bowel trouble, so common with incubator chicks, for which the incubator is not to blame.

I fill every vacancy made by testing out unhatchable eggs, by setting a couple of hens at the same time I set the incubator, to draw from when eggs are needed; or, when I have as many as 600 eggs set. I fill a small machine just to draw from.

At hatching time, I take the chicks out every hour or so, covering them lightly, but never allowing them to get hot enough to sweat, which is always fatal. I am very careful about letting cold air into the incubator, as it chills the unhatched chicks.

In about forty-eight hours I feed cracker-crumbs or bread-crumbs, placing bran, cold water and grit before them all the time.

Infertile eggs in the tray do not poison the air, but they are very misleading. Since they are colder than other eggs, they will bring down the mercury when the thermometer touches them.

GLAMIS

Box social in Lockerby school on Friday evening, Dec 14th.

"Maplehurst," the home of Mr and Mrs Henry Purdy, was the scene of a pretty wedding on Tuesday, Nov 20th, when their only daughter, Cora Mary, was married to Mr Arthur Groves, Rev. Mr Storey officiating. The bride, who was given away by her father, wore a charming gown of duchess satin with an overdress of embroidered chinon, with veil and wreath of orange blossoms. She was attended by Miss Margaret Currie, who wore a dress of mauve silk with touches of black. The wedding march was played by Miss Ina Alexander. Mr Wm Keyes was best man. After the wedding dinner the happy couple, accompanied by their friends, drove to Cargill and took the train for Toronto and other points. The bride's going away gown was of heavy blue velvet, with a large white hat. The many presents received were both costly and useful. On their return they will take up housekeeping on Mr Groves' farm on the boundary. All their friends wish Mr and Mrs Groves long life and happiness.

Miss Lizzie Ferris is visiting in Paisley, the guest of Mrs Carr.

Miss Sadie Colwell is spending a few days at the home of her sister, Mrs D Robertson.

Mr R J Nesbit took a trip to Chesley on Monday

Mrs Jackson, who spent a few weeks with her daughter, Mrs R J Nesbit, has returned to her home at Holland Centre.

On Friday evening the W. M. S. of St Paul's church held their annual thank-offering. The choir rendered special music. Mr McAuley gave a few words of greeting from the Baptist church. Rev Dr Andrew Robertson, of Toronto, gave an excellent address in which he spoke of missionary influence, Protestant progress and the true spirit of thankfulness. The ladies served refreshments at the close.

TWELFTH CON BRUCE

Box Social in Lockerby school Friday evening, Dec. 14th.

Sounds like winter these days to hear the sleigh bells ringing.

Mr and Mrs George McGillvary have moved to Paisley. Mr McGillivary is engaged with Hugh Watt.

Mr Smith McClure is pressing hay at Mr John McArthur's.

Mr Tom Hay is cutting wood in Mr Colin McGillivary's bush.

The pupils of S S No 15 had a holiday Monday as the trustees were doing some repairing in the school.

Mr Archie McDougald sold his driver to Mr Hugh Watt of Arran.

Mr John McKay is visiting at Mr Harvey Neilly's.

A number of the young folks enjoyed themselves skating on the first ice of the season at Mr Colin McGillivary's.

Mr and Mrs Friar and family are visiting at Mr Ernie Wilkins'.

Another of our twelfth of Bruce boys, Emerson Pearce, has paid the he supreme sacrifice. Emerson was born on the farm now owned by Mr Nicholson.

ARRAN COUNCIL

Council met Nov. 10th, 1917, all present. Petition from A J Morrow and others requesting to take action under the Ontario Drainage Act, chap. 198 R. S. O. to have the eastern portion of the outlet from Arran Lake, from and including Lot 18, Con 13, to its entrance into the Saugeen River, deepened and widened, etc, and it was decided to grant the request and that the Clerk be instructed to write Engineer McDowell to take action in the matter. J A Featherston stated that he did his statute labor but not under the supervision of the pathmaster who has returned the work to done and six dollars were added to his taxes which he asked to be arranged by Council. Left over until next meeting to make enquiry of the pathmaster. Treasurer's statement showed balance to the credit of the township of $1004 93. Communication from Thos. Dixon, C P stating that the Reeve, Assessor and Clerk had performed their duty as selectors of jurors. Private Donald was present, by request, and was presented with a ten dollar gold piece. He thanked the Council for their kindness and was pleased that they appreciated his efforts on behalf of our country. The following orders were issued:—Wilson Nelson, 16 yds of gravel R D's 57 and 69 $1.60; J A Featherston, 1 day removing stones from roadway 20 S R, $2; Hilton Porter, putting in culvert and drawing tile, $5; Joseph Johnston, P. H. King and H T Potts $4 each for selecting jurors; James Ball, cleaning out ditch N G R, $1.; Walker & Merriam acct, 91c; Walter Barber, drawing tile, $18; Frank Walker, inspecting the Kennedy bridge, $1.25 Thos Ash. work on Con 4, Lot 13, $16.35; George Barclay, cleaning out ditch Con. 10 and repairing bridge on 25 S R between the 10th and 12th line, $50.50; Robt Bailey half day with team on 25 S R north of 10th Con $2; George Miller, 2½ days with team on grader, $10; Wm Ross, 1 day of self with grader $2; Wm Ross, ½ day with team drawing timber at Kennedy's bridge $2; Fred Spence, work with grader on Colline and in Arran, $17.50; Joseph Johnston committee work, Kennedy's bridge, $8.50; Fred Scarrow, committee work on Kennedy's bridge, $8; Wm Nelson, digging ditch and putting in tile Con 13 and across the road at rear of Lot 40 H S R, $10; Hugh McArthur, gravelling on N Line, Lot 10, $61.75; A G Kepler, postage acct, $1. The following parties were appointed D R O and P C's for the coming municipal elections if any:—Polling Div. No 1, T H McFadden and Adam Kepler; No 2, Robt Henderson and Wm Grant; No 3, Sam Coleman and John Harron; No 4, Albert Speer and Fred Spence: No. 5, John R Boyd and Adam Geddes: No 6, Frank Arnett and Wm Scarrow. The report of the Inspector of Kennedy's bridge will appear later. Council adjourned until the 13th of Dec. as per statute.

A Woman Advises Women

Tyndale P.O., Ont.

"I received your sample of GIN PILLS and after using them I felt so much better that I got a box at my druggist's and now I am taking the third box.

"The pain across my back and kidneys has almost entirely gone and I am better than I have been for years. I was a great sufferer from Rheumatism but it has all left me. I strongly advise all women who suffer from pain in the back and weak kidneys to try GIN PILLS."

MRS. T. HARRIS.

Gin Pills sell for 50 cts. a box or 6 boxes for $2.50 at all good dealers, or postpaid direct upon receipt of price from National Drug & Chemical Co. of Canada, Limited, Toronto; or in U. S. address, Mr. Dodd, Box 1164, Buffalo, N.Y.

HOW many Victory Bonds have you bought?

Have you put yourself to any real inconvenience to buy Victory Bonds?

Have you denied yourself some purely personal gratification, so that you could invest the money saved in Victory Bonds?

Have you realized the urgent need for personal self-sacrifice to make the Victory Loan a great success?

Until you have bought Victory Bonds to the very limit of your ability, you have not done your duty.

Campaign Closes Saturday Night

What Answer Will You Give?

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada. 65a

"WHO WILL WIN THIS BATTLE?"

Your kidneys are the filters of the body. If they become inactive and fail to eliminate the waste matter, they are apt to throw the whole mechanism of the body out of order, thus toxic poisons are accumulate in the system and be as deadly as snake venom.

Besides causing the minor ailments of rheumatism, sciatica, lumbago and backache, neglect of the kidneys is apt to develop into more serious diseases, such as diabetes or stone in the bladder.

Rid the body of these poisons—clean the bladder and kidneys and cure the twinges of rheumatism with Anuric and you win the battle of life.

Anuric was first discovered by Dr. Pierce, and has benefited thousands of sufferers as well as appeased and eliminated the ravages of the more serious kidney diseases. Now procurable at any good drug store, or send Dr. V. M. Pierce Invalids' Hotel, Buffalo, N. Y., or branch office, Bridgeburg, Ont., 10 cents for trial package.

Thorold, Ont.—"I was wonderfully helped by taking 'Anuric.' For about three years I had kidney trouble and rheumatism. I also had headache. My limbs would swell and I had rheumatism in my arms and hands. My hands would swell and joints would be so sore and stiff I could scarcely do my work. They would pain me something awful. I doctored but without relief. At last I saw 'Anuric' advertised. I began to use and two bottles completely cured me of all my rheumatism, and I think it was permanent for that was a year ago and I have never had any return of this ailment. I have never found a medicine as good as 'Anuric'."—Mrs. R. H. Hurst.

The People's Popular Store

New Goods Arriving for Xmas Trade

DURING the last week we bought a large quantity of samples and odd-outs, new goods direct from manufacturers and importers. We expect to have these placed in stock by the end of this week, and will be able to sell them from one-third to one-half off regular price.

We have still a large lot of seasonable, stylish, up-to-date goods at 25 per cent off regular prices, bought and priced before the recent advances in prices at the factories. Below are a few of our leaders:

Ladies' Coats

1917 styles, reg price $40 for $30, reg $25 for $18 75, reg $30 for $22, reg $16 for $12, reg $22 for $9, and a few broken sizes at last season's for $4 98, also a few sizes with quilted lining and fur collars for $5 98, and one only Black Beaver Cloth with mink marmot collar, a snap for $9 98.

Ladies' Furs

We have all the latest 1918 styles in black and colored Furs at 25 per cent discount off regular prices, and our furs were bought before the recent advance in prices. Note our prices: Sable Collar and Muff reg price $37 50 for $43 10; Black Wolf Collar and Muff reg $23 for $17 25; Black Fox Stole and Muff $70 for $52 50; Natural Opossum Stole and Muff $21 75 for $16 30; Golden Fox Stole and Muff $27 50 for $20 60; Vienna Fox Stole and Muff $14 90 for $10 88; Grey Opossum Stole and Muff $77 50 for $20 62; one only Mink Marmot Muff $10 for $7 50; one only Canadian Lynx Muff $12 90 for $9 98; Black Wolf Muff $10 for $7 50; Black Wolf Stoles $8 for $6; Mink Marmot Stoles $8 for $5 75. See our new only Natural Lynx Set reg $31 75 for $23 80.

All these Ladies' Coats and Furs are direct from three ladies' coat makers and furriers in Canada, and will be sold at less than the cost of production. We have another very reasonable line of goods at special prices considering the state of the markets of the world, viz:

Goods for the Men and Boys—You want a Suit of Clothes, an Overcoat, Underwear, an up-to-date Hat or Cap, Socks, Braces, Collars or Neckties. Call and see our selection, and you will find our prices are the lowest.

Footwear of All Kinds—Including the celebrated Life Buoy Rubbers from the daintiest over rubbers in all the new heels to the heaviest and best Lumbermen's Rubbers and Overshoes. It is very desirable that you should come to the store and see these goods, examine them, try them on, note the prices, and we will abide by your judgment.

Millinery—In our Millinery Department Miss McVicar has got a nice display of Ladies' Trimmed Hats, and prices are now cut in two.

Groceries—We have a full stock of fresh Groceries for Xmas trade. See us for your Currants, Raisins, Peels, Nuts of all kinds, Candies, Dates, Figs, Oranges, etc. Get your Turkeys, Geese, Ducks and Chickens primed up and put the finishing touches on in feed, and have them fat and plump, and have them dry picked, heads off, crops empty, ready to deliver about the week commencing Dec 10th. Ring them in to us then and you will be sure to get the highest market price.

THE PAISLEY MERCANTILE CO.

THE CITY BAKERY

Conserve! Conserve!

We are proud to say we have the cheapest food on the market. BREAD! BREAD! BREAD! Eat more bread. Save more money.

We have on hand a variety of specialties, only mention a few—California Grapes, Spanish Onions, Sultana Raisins in bulk, Apples, Sardines selling 2 cans for 25c, Layer Raisins, Pimento Cheese, Marchineo Cherries in the bottle, all kinds of Confectionery, Nut Bars in abundance, Boxes of all kinds.

Did You Ever Use Crisco?

Why not? Cheaper than lard. We have it.

All accounts must be settled by Dec. 1st. Do not forget this.

Pte Woods Was Killed

Word has been received by Mr and Mrs D Woods, of Lora, that their son was killed in action. The previous messages had stated that he was "missing or believed to be killed." A memorial service in honor of deceased will be held in St Paul's Presbyterian church, Glamis, on Sunday morning next.

Hello! Hello!! Hello!!!

Bell Telephone subscribers on connecting lines are asked to remember that ten short rings means everybody answer, when any extraordinary news such as war special headings or election news, will be flashed over the wires. Please see that all receivers are down when this call comes. The system will start with a special call on all lines from Paisley Central on Thursday evening.

Improving His Herd

Mr W. T. Hopper, of Ellengowan, bought two choice thoroughbred shorthorn cows lately from the celebrated herd of J W Watt, Elora. Both these cows are bred to the champion shorthorn bull of Canada and Gt Britain, "Gainford Marquis." By getting such blood as Gainford herd, Mr Hopper is showing a very enterprising spirit, and undoubtedly adopting the best plan for stock farmers to follow at this particular time to improve their prospects for the future.

STOCK TONICS

Who'll have a Barrel (100 lbs) of Dr. Hess & Clark Stock Tonic and Worm Expeller at $8.50?

We call special attention to this tonic for hogs. Try it for rapid healthy growth of pigs. It is of great value in warding off disease, expels worms. Other packages —Pails $2.50, 10 lbs. $1.25, 4½ lbs. 65c, 2 lbs. 25c.

THE EERIE CALL

By Augustus Goodrich Sherwin.

(Copyright, by W. G. Chapman.)

"How eerie!" shuddered Constance Merrill.

"Worse than that!" growled her father. "We would be doing something else beside grubbing along as we are, if the man who owns, or owned that rickety old place played me square."

"I have heard mother hint at something of that sort," said Constance, "but she never went into details."

"No, it is a tabooed subject," responde her father, "Sorry it has come up now. You ought to know as much as we do, though, so you can join us in hating the Russell family."

"Oh, papa! It is wicked to hate anybody."

"Not old Jim Russell!" declared her father volubly. "You must know that the specious old scoundrel got into my confidence. I had just inherited ten thousand dollars. He induced me to trust the funds with him. He said he had twenty thousand dollars to put with it any buy a piece of city property at a great bargain that he could later turn for fifty. I trusted him. I was dazzled. Within a week he and his family, son and wife, disappeared, bag and baggage, and have never been heard of since. We found out later that his old house here was mortgaged to the limit, so much so, that the mortgagee has just let it stand there and rot away, for no one would buy it."

"They say it is haunted," suggested Constance.

"John Russell ought to be, if he has any conscience!" retorted Mr. Merrill bitterly. "He spoiled my life!"

Russell's place had stood unoccupied for five years. It was on a side road and out of the regular course of travel. Constance had not seen it half a dozen times in her life. Now, having heard its history, she was interested. She took occasion to ask an older friend about it.

"There was a mystery," the latter informed her. "I felt sorry for Mrs. Russell. She was a lovely woman. Her husband was a reserved sort of a man, but had an anxious, hunted look about him, not the shrewd cunning look some people tell of. I felt sorry for the son. He was just about your age and was doing well in college when the break came. I've often wondered what the rights of the affair was —their leaving so suddenly."

Romance, mystery, perhaps tragedy —Constance dreamed over the intricate situation. One day she and a friend strolled in the direction of the Russell place. They ventured into the overgrown garden and finally upon the broken-down porch.

"Why, the door is off its hinges," discovered Constance. "I would like to have a peep inside. Sylvia, there's some furniture and pictures on the wall."

"So there is," quavered her companion. "If it wasn't so ghoulish, all the story, I'd like to see what the Russell folks left behind them. And I wonder why."

A step at a time, the timid two advanced. Finally, trembling quite, they stood within a room off the hall. A warped and moldy rug lay on the floor. The furniture was mildewed and dusty. Some pictures on the wall still remained.

"That is Albion Russell," spoke Constance's companion, indicating a framed photograph. "That is just as he looked the last time I saw him."

The picture appealed to Constance. The face was distinctly good and handsome. She experienced a sudden access

A Creepy Awesome Sensation Held Her in Momentary Thrall.

of pity for the young man, his life spoiled by the misdoings of his father.

It was a month later when the old spell of witchery, attaching the mind of Constance to the old ruined home, led her steps irresistibly in its direction. She ended a casual stroll at its broken gate. Then she walked around the house. They was something sad and forlorn in the long-neglected garden, overgrown with weeds, yet here and there a rose or a honeysuckle piercing the heavy blanket of noxious cumbrous greenery.

Constance was about to leave the gruesome wrack of a home when she started, halted and turned in a flash. A creepy awesome sensation held her in momentary thrall. A strange thing had happened.

Clang—clang!

A bell had sounded forth two cracked somber notes. Whence? Surely near at hand, for the air quivered. By whose hands? No human being was in sight.

Clang—clang!

She paused, about to hasten from the spot, so strong was the spell of uncanniness. Then she discovered that the bell must be in the belfry of the old granary. Employed to call in the farm hands in the olden days, why had it sounded now?

She could see the slats in the belfry vibrate, in fact the whole structure shook visibly. The denuded doorway of the granary below showed no dangling rope. Her sense curdled. Then she bent her ear keenly, awake to a new manifestation.

"Help!"

The word was faint and muffled. It surely came from the belfry or its near vicinity. It was repeated.

Then a moan, low, pitiful, despairing, and then all was still.

"I mustn't be superstitious—I will be brave," Constance told herself, but her tone quavered. Yet she approached the granary. The bell and the voice were no longer in evidence. Had it been all a superstitious delusion? She crossed to where some stairs ran up to the second floor. She mounted them till her eyes were level with the upper flooring.

"There is a rope," uttered Constance. She could see it dangling amid a heap of wreckage piled up in the center of the loft floor. The heap seemed to move. A moan issued from the heap.

"Oh, surely somebody is there!" panted Constance. "It looks as though someone climbing into the belfry had brought down a part of it upon himself. He may be dying under all that wreckage. Courage—duty! she whispered to herself and approached the motley pile.

Constance lifted board after board from the heap. She quivered as a human arm was revealed. Gently she pulled aside a heavy timber. She thrilled. Beneath, apparently unconscious, lay a bruised form. In a flash she recognized the face. It was that of the young man whose portrait she had seen in the deserted house.

Albion Russell opened his eyes. He stared dazedly at her. He managed to sit up. She aided as he strove to move the debris from his lower limbs.

"I fell," he said faintly, "or rather the lower part of the belfry broke with me."

Constance helped him down the stairs. He moved limpingly, but the color came back into his face gradually.

"I have to thank you all the days of my life," he said. "I feel still weak—if I could get to the nearest house—"

"Our own," decided Constance promptly. He was the son of the man her father regarded as his deadliest enemy, but humanity, interest, pity moved her to a signal resolution.

"I must rest," he finally said, and he sank to a fallen tree by the wayside. "whom is it I must thank?" And Constance told him her name. She noted a glad eager light come into his eyes.

"How fortunate! It is destiny!" he cried, and awakened new emotion seemed to impart strength. She sat spellbound as he narrated to her the secret of his presence.

His father was an escaped convict. Discovered by a treacherous acquaintance, he had fled the country on brief notice and had sent for his wife and son to join him. They found him in a strange dazed condition, caused by a fall on shipboard. He had died only a month since. Once only, in a flash of coherency, he had remembered the thirty thousand dollars he had hidden in the old belfry.

So Albion Russell had come to find the money. It was now in his possession and restitution of his share was made to Robert Merrill that night.

And then the mother came back to the old home. And Constance consoled her loneliness. The crime for which John Russell had suffered was proved to have been nothing worse than acquaintanceship with the real culprit. Love and peace came to the troubled mother and son at last, and Constance shared these mutual blessings.

DOMESTIC SCIENCE AT HOME

Nineteenth Lesson—Cooking of Meats.

Boiling, braising, steaming, grilling, broiling, sauteing, roasting and baking are the various terms used to denote the methods employed in cooking meats.

Boiling is a term used to denote a process of cooking meat by boiling in water. Two methods are used in this process, namely, cooking meat in soup, second as in stewing.

Boiling as in Soup

The meat is placed in cold water and brought slowly to a boil. It is then cooked for time necessary to obtain the nutriment in the broth or liquid, usually three-quarters of an hour for each pound of meat.

Boiling as in Stewing

Plunge the meat into boiling water. This causes the albumen to form a coating over the surface of the meat, thus protecting the juices. It is a well-known fact that the albumen in the meat coagulates upon the application of heat. The meat is then cooked until it is tender. Time allowance is about thirty-five minutes to the pound.

Correct Method of Boiling Meat

Place the meat in a saucepan of boiling water and then keep the water boiling rapidly for five minutes after the meat is added. Then place the saucepan in a position where it will cook just below the boiling point for the required length of time. Constant and rapid boiling will cause the albumen in the meat to harden; therefore no amount of cooking afterward will soften the fiber. It will only cause the meat to fall apart without being tender.

It is important to keep the saucepan closely-covered. This will prevent the delicate aroma from evaporating.

Braising: Meat is placed in a hot saucepan and turned frequently. It is cooked in its own juices in a closely covered saucepan.

Steaming: Cooking meat by placing in steam bath or steamer.

Grilling: Cooking meat over a hot fire on a grill made for this purpose.

Broiling: A very hot fire is necessary for this mode of cooking meat. Only the choicest, tenderest and most delicate cuts are suitable for cooking by this method. The strong heat instantly congulates the albumen by searing it, thus retaining all its juices and flavor. That this method may be successful it is very necessary that the meat be turned every few moments. This also insures it being cooked evenly.

Pan Broiling: This is another method of cooking the fine cuts of meat when it is not possible to broil them. Broiled meat is more healthful and also less wasteful than any other form of cooked meat.

To Pan Broil

Heat an iron frying pan red hot, then place in it the meat. Turn it constantly until cooked. When using gas range for broiling always place one quart of boiling water and one tablespoonful of salt in the dripping pan. This will prevent the fat from catching fire; it will also facilitate the easy removal of this fat, which when cold, can be lifted with a knife or spatula.

Meat when broiling always puffs slightly. This is partly due to the quick searing of the surface. As the meat cooks this disappears, so that if you press the meat slightly with a knife and it does not feel spongy it is then ready to serve. Do not overcook meat. It loses all nutritive value as a food if it is cooked until hard and dry.

Roasting and Baking of Meats

Roasting or grilling is done before open fire, the meat being turned frequently, so that all sides may be cooked alike. The meat is basted with its own fat. This method of cooking meat is used daily in Europe, but not much used in this country.

When a piece of meat is large it is roasted. Meat cooked in an oven by radiated heat is frequently called in this country "roasting." It is well known and needs little description. When baking meat always use a wire rack to lift the meat from the bottom of the pan. This will insure even cooking.

Use the broiling oven in the gas range for roasting, placing rack sufficiently low. Have the oven hot enough to brown meat quickly, then reduce the heat so that it will cook evenly, turn the roast three times during the process.

Allow one-half an hour after placing meat in the oven before counting the time. This is necessary so that the meat may reach the required temperature to start cooking.

To bake (oven roast) use same process, using regular oven.

Start counting time after meat is one-half hour in oven and allow twelve minutes to a pound for very rare, fifteen for rare, eighteen for medium and twenty for well done.

Baste the meat with the liquid in the pan every fifteen minutes. Do not add seasoning to the meat while cooking. It is a well-known fact that salt will cause the juices and flavoring of the meat to dissolve and therefore become lost. Season steaks and chops just before serving. Season roasts five minutes before removing from the oven. Always make the gravy after removing meat from the pan.

Note: Never dish meat on a cold platter. The contact of a cold dish with the hot meat will injure its delicate aroma.

In many portions of France and England chops and steaks are served upon platers set over a utensil of hot water or a special fuel that can be burned in a container that holds the platter. When serving a large steak always have a cover of metal or another hot dish turned over the meat to prevent it chilling.

THE BEST WAY TO SEND MONEY TO THE BOYS IN THE TRENCHES

It is hard to break the chains of habit. It took one man six months to stop saying "Gee Whiz."

Perhaps habit has kept you ordering "the same tea as before" when you had intended to buy Red Rose.

This will be a reminder. So next time you will order Red Rose. You will be pleased, we are sure.

Kept Good by the Sealed Package

Using All the Apple.

Since economy is Canada's watchword we must utilize everything we can. Cut up the apples without peeling, taking out cores if wormy; cook till tender, then put through a fruit or vegetable press and cook down again for apple butter. The juice may be used for jelly. The butter has a richer color and better flavor than when apples are peeled.

If Queen Isabella of Spain could commit her costly trinkets to the melting pot to discover the New World, now is a good time for the New World to emulate the royal example in proceeding to the succor of the Old.

BACK TO THE FIRING LINE

VIVID DESPATCH FROM WAR CORRESPONDENT.

Pathos and Humor of Departure and Return of Our Men to the Front-Line Trenches.

She was visible a mile away, puffing her long, sinuous form through the scented fields, past the laden apple orchards, slowly steaming her way along the track, as if reluctant to carry her living freight from the peace and beauty of Nature to the disorder and clamor of war, writes Hilda Lees, war correspondent, from France.

Then, with a series of groans and clunking, she came to a standstill, just as the morning sun pierced through the mists, disclosing a glorious countryside, heralding a perfect September day.

And the stillness was broken.

Storming a Hut.

The railway track became alive with a multitude of khaki figures in all stages of undress. Some had tunics off, many were in stockinged feet, all besieged the Y.M.C.A. buffet stationed by the line.

For an hour a couple of thousand men purchased long French loaves, biscuits, cigarettes, and tea. While the rush was on one had no time to think, little time to talk, just handing over articles for all one was worth, hearing in between every kind of brogue, catching sight of the badge of every regiment.

And then came that lull.

Sitting on the ground, on the footboard of the train, anywhere and everywhere, Tommy was taking his refreshment. He now had time to look about him, to inquire the name of the place, to calculate how long before he reached the line, to stretch his legs after the dreary night journey, to run along the train seeking out some mate, to take his turn for a wash at the big wooden tubs—to write that postcard home.

That Last Line Home.

Another crowd besieged the counter this time—the same, yet different. All were after postcards. That was the moment when I longed for some corner to quietly weep. Officers and men alike were writing on their knees, against the carriage windows, using any bit of support to make their writing legible. This was the moment that belonged to the women at home, to the women who loved them, whose lives were wrapped up in theirs, who at that moment were wondering and thinking of them.

They handed their cards with the familiar sign of the red triangle over the counter. Generally there were two cards, one to a "Mrs." and the other to a "Miss," and the destinations were to every part of Britain and her Dominions. Only one addressed to a "Mr." did I see, and that bore a request from "our loving Bill" for a postal order for five shillings.

The Worst Moment Of All.

To their "dearests" and their "darlings" they sent their words of love and cheer before they went again to do their bit, and nearly always it was the same message: "Had a good crossing. Just going up the line. Will write again when I arrive. Don't worry. Fondest love."

"It isn't now we feel it so much," said one Liverpool man, as he handed over his cards, "it's when we leave the home folk. Once you're away and on the job again—well, you've just got to go through it cheerfully; but that saying good-bye nearly kills me. This is the third time for me."

The women at home who see them off, who give them that last look and embrace, only guess at the silent battle their man fights before he sends off that card in France. It is the last thing he does before he enters the war zone, his first thought upon arrival.

As the whistle blew the boys scrambled aboard the train, as brown, fit, and cheery a crowd of our fighting men as a British woman could wish to see, a right to make her eyes glow with pride, even while her heart ached at the tragedy of it all for none could say who would return.

Ready For the Fray.

The track was cleared, many swung aboard as the train started. Out of the carriage windows, from the open doors of the cattle waggons, showed smiling faces as they waved their hands and sent their greetings. Some looked back a trifle wistfully; we were the last British women they would see before the line claimed them.

"Au revoir, Blighty" called a man in the last waggon.

I have seen these trains pull out in the morning sunlight, seen them disappear into the night with their cargoes for the front line, and always their effect is the same—it leaves one praying for the courage and laughter that is theirs, for the day when the sacrifice of Britain's best shall cease.

Railway lines fascinate me.

Without them this war could never be.

The shining metals carry our men from our very doors at home, bring them to the verge of the line, and over their surface go the hopes and the hosts of Britain.

This station where I am temporarily quartered is to me one of the most eloquent spots I have yet seen in France. The names painted on its route contain those that will wring the hearts of Frenchmen for ever, villages and towns that England will remember for centuries.

Lines of Fate.

On one side run the trains that take our men up the line, while on the other side the leave trains come down; and between these two tracks of Fate, set in a sylvan scene only disturbed by the dull roar of the guns, stands the Y.M.C.A. railway buffet.

Another train came winding along the track two hours after the departure of the line train, its engine facing the direction that means home—one only realizes out here the full significance of the direction in which a train is travelling.

This train also pulled up, and once again the counter withstood the rush. But if the scene at the counter was interesting, that outside was more so. In the short interval at their disposal, men of all ranks had flung their tunics aside, and were washing for all they were worth, some bared to the waist as they vigorously plunged their heads in the tubs.

Tommy's Toilet.

Here was a major, with his mirror propped up on the footboard of the train, carefully shaving himself, while, seated on the ground near him, a broken piece of glass held carefully between his knees, a private sat lathering his face with dead seriousness. Some were cleaning their boots, one man was sewing buttons on, others were refixing their puttees—all that safety razors, soap and water, brilliantine and brushes, could do for their heads was done with sober earnestness.

I have often seen a crowd of girls pondering their noses and patting their hair before they sallied forth to conquer, but this is the first time I have seen many hundreds of warriors fresh from the line getting themselves trim for Blighty.

There was no writing of postcards this time. There was just a great happy content in their eyes as they boarded the train that would take them to the boat. This time to-morrow they would be in Blighty, the women and children whose photos they treasure so carefully in their pocket books would be welcoming them, for ten wonderful days the menace would be lifted.

Bright eyes shone from brown faces as the train moved out on its final journey—fathers and brothers, husbands and lovers, the fighting men of Britain were going home.

FOR KING AND COUNTRY.

Two Stories of Women's Heroism and Self-Sacrifice.

I have just heard two little stories of women's heroism in the war-stricken zones of Europe, stories which may help to strike home to you something of what the red horror of war really means, says a woman writer.

In England it has been necessary for the women to go to work in the munition factories in thousands to allow their men to march off to the rigors of the trenches. They have been forced to labor in an atmosphere of powerful chemicals that was turning the English bloom of their cheeks an ugly yellow, bleaching their hair an unnatural white, and even making their fingers slowly shrivel and drop away. Face masks and gloves were provided for their protection. They served their purpose, but they lessened their ability at the vats and benches, and the output of the factories was falling off.

The result in at least one great plant was that the women voluntarily cast aside the protecting masks and gloves. They were willing to bear their physical disfigurement rather than have the supply of munitions lessened. When the war is finished hundreds of English women who before were buxom beauties of the countryside will be caricatures of what they once were—but they will have sacrificed their physical beauty on the altar of their flag.

Here is the second story of women's war sacrifice from the horror-swept Serbian frontier: A British nurse happened on a native woman, weeping piteously over a new-made grave. It was that of her third and youngest son, the last sacrifice she had been called upon to make in the cause of her country. The nurse tried to console her as best she could, for even a sister-woman's sympathy is lame and awkward before such a spectacle.

"I am not weeping for the loss of my sons!" she burst out. "I am weeping because they left me two grandsons who are not old enough to fight for their flag!"

Yet you have it—something of the grimly inspiring but heart-gripping heroism which descends on the women of a country face to face with the gaunt hideousness of war.

Not For Him.

An old farmer, who by hard work and parsimonious habits had got together a little fortune, decided that the time had at length arrived when he was justified in ordering a family carriage.

He went to a carriage builder's, and described in detail the kind of vehicle he wished to buy.

"Now, I suppose you want rubber tires?" said the carriage builder.

"No, sir," replied the old farmer indignant of resentment. "My folk ain't that kind. When they're riding they want to know it."

TOUCHING SCENES AT THE FRONT

LITTLE SKETCH OF Y. M. C. A. ACTIVITIES.

Pathetic and Soul-Stirring Pictures of the Heroism and Self-Sacrifice Of Our Gallant Men.

And as the wounded men hobble back to the dressing station—and men are walking back from No Man's Land with wounds that would kill most of us outright in less heroic times—the Y.M.C.A. is ready with tea, cakes and chocolate and the soldier's best friend—the cigarette. Every man, before his wounds are dressed, gets hot soup, cigarettes, biscuits, whatever the Y.M.C.A. has. One Y.M.C.A. tent behind the British lines has cared for 13,500 wounded men in one day; 40,000 in a month. One of the association secretaries thinks that the most Christian act he ever did was lighting cigarettes for men whose arms were so badly wounded they could not do it themselves.

A colonel in the British medical corps, looking out into a courtyard where 2,000 wounded Tommies were waiting stoically to have their wounds treated, cried, "What under heaven would we do without the Y.M.C.A.?" In the dressing station haggard doctors were treating wounds as fast as men slice pie in a restaurant. And in a tent beside that courtyard the Y.M.C.A. secretaries were brewing tea, passing out chocolates, as fast as they could work.

Back to these same stations come the German prisoners, with their captors. Tommy, who half an hour earlier has been engaged in hand-to-hand combat with Fritz, now stands side by side with him, sorrier for his wounded enemy than he is for himself. He will give Fritz half his chocolate, light the prisoner's cigarette before his own. A German boy of eighteen stood quivering from head to foot in the ghastly nervous collapse of shell-shock. An English soldier, badly wounded, stood by him.

"Poor fellow," he said. "He's got his." And he insisted on the Boche being attended to first.

The Path to Calvary.

Another picture a Y.M.C.A. secretary describes is of a wounded Tommy hobbling back after a charge. His trousers were torn away, his legs gashed by the wire and torn by shrapnel so that he could scarcely walk. He was dripping with blood and filth. And on his back was his pal, worse wounded than he.

"When I saw that I broke down and cried like a baby," said the Y.M.C.A. man.

There is no road in the world so lonely as that trod by the men moving up to the front line before an attack. In full kit, with their "tin hats," gas bags, bombs and bayonets, they trudge silently, each man in his own private hell. No road was ever so lonely since the path to Gethsemane and Calvary. Men speak in whispers, if at all.

In watching thousands of English and Canadians move up to the front trench during the recent push near Ypres, a Y.M.C.A. secretary reports that the only cheerful word he heard spoken was when an association lorry passed up the road with supplies.

"Good old Y.M.C.A.!" cried a Tommy, and there rose a feeble cheer.

There is no time for blinking the facts. Men don't go into the hell of hand-to-hand combat with a laugh and a cheer. As they plod through the mud and darkness the only hope before them is an honorable wound that will take them home—a "blighty one," as the English say. And in that dark hour, when every man has laid aside the hope of all that life holds dear, the Y.M.C.A. is watching with him and doing what it can.

Japanese Bounce Ball.

Japanese children, like those of all other lands, have numerous games that allow them to make use of a ball in one way or another. Perhaps the favorite game of Japanese girls is bounce ball, and you will often see them playing it, singly and in groups, in their homes, on the streets and in their playgrounds. An elastic cord is attached to the ball, and the other end is held in the hand, or more often fastened to the thumb or a finger.

The game itself is not a contest but rather a form of play and exercise, although sometimes two girls make it a contest by trying to see which can catch the ball the most times when it bounces back toward the hand from the ground or the end of the cord. More often they do not try to catch the ball, but simply push it or bat it with the open hand, walking or running as they do so. In that case they commonly limit the fall of the ball by the length of the cord, but at other times they let the ball strike the ground or a wall.

The ball itself is usually very light and is wound with silk. Perhaps the most bounceable ball that can be made without the use of India rubber is a hollow ball made of split cane. Such balls are made by the natives of the Malay Peninsula. They are usually about six inches in diameter and are woven in an open pattern.

Now is the time to study up on gardening. If the garden was a failure this year find out just why, if possible. Read up and make plans for next year.

WHEN AUTUMN COMES.

Wild Creatures Feed Up in Preparation For Cold Season.

When autumn comes, with its attendant harvests, its ripening of seeds, nuts, and fruit and its hosts of frost-benumbed insects and spiders, the wild quadrupeds, even including the meat eaters and the resident, non-migratory birds, as though knowing instinctively that the season of little food is but a few weeks away, eat to the fullest extent of their capacity and thus lay on much fat.

Nuts constitute the richest food for the strictly vegetable eaters and for the more omnivorous species the insects and spiders vie with the nuts in nutrition. The meat eaters get the value of all by eating them directly and by eating the eaters of them. A squirrel or grouse fattened on beach nuts or chestnuts must constitute a choice repast for fox or hawk.

The all-winter active creatures are as fully inclined to feed up for winter as those that hibernate or sleep throughout the season of cold. It may be that this apparent inclination is merely occasioned by food being plentiful and the consequent temptation to gormandize, to eat and eat and then eat some more. Wild geese have been known to gobble up so much loose corn left in a field that they could hardly fly up from the ground, and at this season any creature shot will generally show a much distended stomach, its contents made up, upon examination, of a far greater variety of foods than we would suppose the animal likes or is capable of digesting. It is well known that the omnivorous skunk and opossum will eat anything from green corn to salamanders, and the bear is another to take in nearly everything at all edible that comes his way; but inside of that dainty feeder, the gray squirrel, have been found pieces of hard bark not any too well masticated and also smooth, round, black pebbles, swallowed for what purpose cannot be surmised.

Almost all of our common birds are omnivora, except the flycatchers proper and those others that live solely on insects taken on the wing. Berries and bugs of nearly all kinds and seeds commonly constitute their chief articles of diet, but they also pick winter buds, flower petals, soft lichens, mushrooms, tiny toads and even tadpoles, mosses and sweet sap exudations.

Carnivorous birds stick pretty much to a meat diet, but carnivorous quadrupeds probably eat less flesh than they do vegetable matter of one kind or another, mostly fruit, grass and soft nuts.

BEAUTIFUL VENICE.

Storehouse of Priceless Works of Art Menaced by the Hun.

All the world trembles lest the city of Bellini, Giorgone, Titian, Tintoretto and Veronese be ravaged by the Hun. Ahait omen! Italy is doing her best to avert the barbaric rage. Venice will not resist attack; already she broods in silence over deserted streets and empty palaces. Will the hand that fired Louvain refrain from desecrating this sacred shrine of art? The last scene of violence within her borders was the heroic revolt of Daniele Manin against the Austrian oppressor. No vengeance was wreaked then upon the inanimate witnesses to the glory of the past. It will add a deeper damnation to the very name of Kultur if vengeance is wreaked now. Perhaps the valor of the army at the Piave will suffice to protect the Bride of the Adriatic. Her destruction would be the greatest calamity of the war. Even Rome herself has hardly a better right to demand exemption. There is no other city just like Venice—there never will be.

Her old supremacy has passed forever, even though she has become again a busy mart of industry and trade. She is in this respect but one among many. Yet her history remains among the wonder stories. The Venetian Republic, an oligarchy in fact, was one of the great powers of the world. After the Fourth Crusade she held Constantinople and dominated the East. Italia Irredenta, for which the battle is waging now, was hers; so were the Isles of Greece, where burning Sappho loved and sung. To make her Mediterranean rivals her vassals in the fifteenth century she was the leading maritime state. She might have carried to success the constant struggle with the Turk had not the hardy explorers of Portugal altered the map by discovering the sea route to India by the Cape of Good Hope. But for this it may be doubted if even the incompetence and corruption which overtook her government could have destroyed her.

Yet this once-time Queen of the Seas still keeps her regal mien. If the Hun is not beaten back from her gates, will he dare to lay sacrilegious hands upon her?

Why Nelson Is Dead.

She was an admirable person and never lost an opportunity of pointing a moral to her small nephews and nieces. She took them to the museum for a treat.

"This," said the guide, "is Nelson's waistcoat, worn at the battle of Trafalgar, and this is the hole where the fatal bullet went through."

"There, children," said their aunt. "You remember what I said about a stitch in time saving nine. If that hole had been mended the bullet wouldn't have gone through." Then she capped it by adding, "And Nelson might have been living yet."

CAREER OF THE LATE GEN. MAUDE

WON RENOWN FOR STRATEGY IN THE PRESENT WAR.

Captor of Bagdad Passed Away On November 18th, After a Brief Illness.

Lieut.-General Frederick Stanley Maude, C.B., (1915), C.M.G., (1901), D.S.O. (1900) was an Irishman, born June 24, 1864, the youngest son of the late Gen. Sir F. Maude, G.C.B., V.C. He entered the army in 1884, was attached to the Coldstream Guards, became Major, 1899; Lieut.-Col., 1907; Colonel, 1911; Major-General and Division Commander, 1915. He was a colonel on the general staff of the War Office when this war broke out, was one of "the first hundred thousand"—the original British Army—in France and was one of the first officers to be mentioned in despatches during the retreat from Mons. He commanded, as Brigadier-General, the famous 14th Infantry Brigade, the first across the Aisne River in the Venizel sector in the epoch-making battle, when the German onrush to Paris was hurled back. He had neither boats, pontoons nor bridges, but he got his men across under heavy shell fire, on rafts improvised out of wooden fence rails and barn doors, bound together with osiers, and followed this up by capturing at the point of the bayonet the strongly-held village of St. Margaerite. Later on in the campaign he was severely wounded, and was invalided home, but directly he recovered he returned to the front and was on the staff of the 3rd Army Corps at Festubert and elsewhere.

Mesopotamian Successes.

He had been several times mentioned in despatches before he was sent to retrieve the fortunes of the British army in Mesopotamia. For some months after Townshend's surrender

The Late General Maude.

at Kut-el-Amara in April, 1916, the British campaign was at a standstill, until Gen. Maude assumed command late in the year, and in December began his attack on the Kut defences. On Feb. 24 Kut was recaptured, after a brilliant campaign, and so relentless was Maude's pursuit of the fleeing Turks that 15 days later, on March 11, the British had occupied Bagdad, having covered 110 miles and crossed the Tigris three times. Subsequent operations directed from Bagdad advanced the British lines a considerable distance. With the opening of the new campaign this fall he had pushed up the Tigris more than 100 miles beyond Bagdad, his operations being designed primarily to defeat the expected attempt of the enemy to recapture the city.

Served in South Africa.

General Maude had seen previous active service in the Soudan (1885) and in South Africa (1899-1901) including the advance on Kimberley. Subsequently he became well known to Canadians as military secretary (1901-4) to Lord Minto, when the latter was Governor-General, and had charge of the arrangements for the Canadian tour of the present King and Queen in 1901. He was private secretary to the Secretary for War, 1905; D.A.A., Q.M.G., Plymouth, 1906-8; of General Staff, London Division, 1908-9; Assistant Director Territorial Force, War Office, 1909-12; General Staff, 1912-14. He was married in 1893 to Cecilia, daughter of the late Chl. Rt. Hon. Thos. Taylor, M.P., of Dublin, and leaves one son and two daughters.

Can Make Tear Gas in Texas.

German "weeping gas," according to a recent report issued by the Smithsonian Institution, likely is manufactured from sabadilla, a Venezuelan plant. It is reported that the Germans bought up all the available supply before the declaration of war. Now, however, the seeds have been declared contraband by Great Britain. A plant of the same genus grows wild in Texas and should the need for sabadilla arise it might be cultivated in the Southern States.

JEANNE OF THE LITTLE HATCHET

ANOTHER WARRIOR MAID OF FRANCE.

Like the Maid of Orleans She Rose to the Opportunity When Danger Threatened.

The Maid of Orleans was the first and greatest warrior maid of France, but she was not the only one. There was the Maid of Beauvais, Jeanne Fourquet, surnamed Hachette: Jeanne of the Little Hatchet. Thrilled and impressed in childhood with the story of Jeanne d'Arc, the peasant heroine, this second Jeanne, far more gently born and bred, a daughter of the comfortable bourgeoisie, unacquainted with hardship, rose instantly to the opportunity when her native city was imperiled.

Charles the Bold, with a great army of Burgundians, had arrived before Beauvais, and although the citizens had been promised reinforcements, none had yet arrived. There was doubt, hesitation and confusion. The young Jeanne, catching up the little hatchet, which was the nearest weapon to her hand, hastily offered herself and it at the shrine of Saint Angadresme, the patron saint of the city, and ran into the tumultuous streets crying, "To arms!"

Perhaps because the memory of that other Jeanne was still fresh, perhaps because of her own flaming fervor, she was heard, heeded and followed. She roused not only the men, but the women and children, to fight, and that not in a single surge of enthusiasm, but repeatedly throughout the siege. For the Burgundians, "repulsed in their first onslaught, were by no means defeated. They "dug themselves in," as we should put it, before the walls; indeed, the ancient narrative of the "long and profound trenches," some of which were "hollowed into posts of refuge," and others fortified, while still other connecting trenches shielded the besiegers from the fire of the besieged, has a curiously modern sound except that arrows figure instead of shot and shell. But then as now there were catapaults; and if there was not liquid fire, there was boiling water and melted lead.

Heroine of Beauvais.

Again and again Jeanne Hachette rallied the discouraged, led the leaderless and fought beside the fighters. When reinforcements came, the mayor presented the girl warrior to the veteran captains, who accepted her as an equal. Gracefully and modestly she attributed to their arrival—"You, meanwhile, to whom victory has always been faithful"—the coming deliverance. But it was still a long time before deliverance came. Besides the dangers from without, there was the danger of treachery within. Once she snatched a paper from the hand of a suspected leader; it was proof of his guilt, and he turned his sword against her and would have slain her had not her cries brought help in time.

But she did not always need to be rescued; she was a hard fighter herself when not caught by surprise. Once, just after having led a party to the rescue of her hard-pressed commander, the Marechal de Roault, she observed the enemy swarming over the ramparts anew in another direction. She rushed to repel the assault at the moment when the enemy standard bearer was planting his banner upon the walls. She drove him back through the breach, down the slope, into the moat and across it; and on the farther side slew him and captured the flag. It was the end. Everywhere as she returned she heard the welcome shout, "Victory! Victory!"

It was the end also of Jeanne Hachette. History knows her no more; nor is it even known what became of her. Probably, her work done, she lived and died like any other prosperous and pretty young bourgeoise of Beauvais. But she is not forgotten. Every year, in August, Beauvais remembers her in its anniversary celebration; and remembers, too, the other valiant women who battled beside their men under her inspiration. Their share in the victory was recognized with promptitude and grace by their King, who, to commemorate it, granted them the perpetual precedence of the men in the yearly procession in honor of Saint Angadresme. For many centuries, with banners floating and in their bravest finery, the women of Beauvais, on their city's special holiday, have proudly led the line.

RIVALS ROMAN ROADWAY.

Railroad From Petrograd to Moscow Follows a Dead Straight Line.

The railway line which connects Petrograd with Moscow rivals a Roman road for straightness. It was first projected in the middle of last century, and the then Czar was asked to state his wishes as to the course the railway should take. In reply he drew a perfectly straight line between his two capitals, and the engineers proceeded accordingly, though many of the natural difficulties to be overcome were great and it would have been far less costly to have allowed some deviations. As it is, it is probably the longest straight railway line in the world.

The Paisley Advocate

PAISLEY, DEC. 5th, 1917

—Two more Liberals are to be added to the Union cabinet, said Premier Borden at Renfrew. One of these is to be chosen from the ranks of labor and the other to further represent agricultural interests.

—There are still those who believe that the proposition for union government is nothing but a Tory trick to retain the Conservative party in power at Ottawa. There are also those who see in it only a Grit move to get into power, and McNish's candidature in South Bruce is a local Grit manipulation. It seems impossible for some to rise high enough to put any faith in the idea of Conservative and Liberal politicians uniting for the service of their country. To them the day when "Tweedledee will be for party and all will be for state" can never come. Let them cast aside their party shackles for a moment and consider whether it would not be wise for all to forget the past, stand shoulder to shoulder and face the problems that are confronting us for the immediate future.

—Opponents of conscription are posting about democracy. They argue that those who would enforce compulsory military service without first allowing the people to express themselves upon the question through a referendum are not democratic, but autocratic. This is rather rough on Sir Wilfrid Laurier, who in 1904 passed a Military Act that contained no provision for a referendum before calling out men to go to war. The Act of 1917 is much more lenient and sympathetic in its provisions than the measure passed by Laurier in 1904. The old Act empowered the Government to send overseas when necessary for the defence of Canada all British subjects in Canada between the ages of 18 and 60 years. The Military Service Act calls for but 100,000 men, between the ages of 20 and 34, raised not by the Government, but by Parliament. Injustice was inevitable under the old militia Act, because the men were selected by the ballot, or blind chance. Under the new Act the men are selected intelligently and sympathetically by civilian tribunals. Again, under the old Militia Act as left on the statute books by Sir Wilfrid Laurier, the first class included men 18 years of age. The present Act leaved such young men immune, starting to call soldiers only at the age of 20. The old system enabled the existing Government to call out all men at its pleasure, whereas the present Government had adopted the more democratic way of securing an Act of Parliament for each call. The old Militia Act empowered military officers, in an emergency, to alter or destroy all buildings, lands, food, crops, fodder, stores, etc; in fact, the entire possessions of the people. The new Military Service Act gives no such powers to the military, but puts the control of the measure in civilian hands. Exemption boards of private citizens, judges and the local police administer the Act. Pay for the rank and file under the new Act is more than twice as high as was their pay as laid down by Sir Wilfred Laurier in 1904.

—Simcoe Reformer: When the Canadian people go to the polls on December 17th, the one all-overshadowing subject that will be present with them, as they mark their ballots, will be the continuance of the country in the war. This war-time election is not going to be decided on the price per acre of Camp Borden, the soundness of Foster's bowels, the extravagance of Sam Hughes' trips to Europe, or the high price of munitions two years ago. All of these are of the dead past. A long list of sins on the part of the old Borden-Roger regime may easily be written up. But they were the sins of an administration that is dead. Today an appeal is being made to the people by a new Government—a Borden-Carvell Cabinet. It is an administration with no past and a possibly great future. No wonder Liberal walks than Frank Carvell, The Reformer has no fear in intrusting its party concerns to his leadership. General Mewburn describes himself as the son of a man who was a Radical when a Radical was pointed at. He himself is as square a man as can be found anywhere, and although never a politician, has always been a convinced Liberal. Of Mr Rowell's earnestness touching the prosecution of the war, and his burning desire to get a fairer deal for the poorer man there can be no manner of doubt. Every Liberal who sat in the House of Commons from west of the Great Lakes, with the exception of Frank Oliver, is today supporting Union. In the Maritime Provinces there is not trouble. Pugsley has accepted high office from the Government of Feilding, all through the life of the Laurier administration in Fielding Minister, is supporting Union, and will be one of its candidates. Even so doughty a champion of Sir Wilfred as Ed MacDonald is now counted as an administration candidate. In Ontario Geo. Graham, Fred Pardee, R W Nesbitt, W A Charlton, and W M German will be Government candidates where they run. Can it be possible that all these men are wrong—that they have for some sordid reason merely turned traitors to their former principles? Is it not more likely that they, possessing information not open to the general public as to the seriousness of the situation, are acting their sympathies to their judgement and consciences?

Asks Father to Vote for Union Government

Walkerton, Dec 3—Major J Henderson, who was appointed Returning Officer for South Bruce, on the recommendation of R E Truax, Liberal, sitting for this riding, on account of his much efforts on behalf of Liberalism in the past, received a cablegram to day from his son, Lieut Herbert Henderson, who is with the 160th (Bruce) Battalion in England, beseeching his father to vote for the battalion and Mr A R McNab, the Unionist candidate and opponent of Mr Truax in this constituency. The son was not aware that the father had been appointed Returning Officer, a position that disqualifies him from voting except in the case of a tie between the candidates. Yet the action of this scion of a strong Reform house in asking daddy to support the battalion and vote the Union ticket is significant of how the soldiers view the situation at home, and how anxious they are that the ones behind should back them up with their ballots on the 17th.

$79,000 for Victory Loan

The people canvassed by D Forrester, R C Pearce and R J Nelson bought Victory bonds to the value of $79,000 as follows: Paisley, Elsinore, Greenock, Cove, Elora, rest of the north Bruce. This total is just about fifty per cent more than the objective set by head quarters. The County of Bruce took a total of over one and three-quarters of a million in bonds.

SOUTH BRUCE POLITICS

Lucknow Sentinel

The electors of South Bruce are confronted by an entirely new situation. They are asked to choose between two candidates for the House of Commons both of whom were formerly Liberals.

The candidates may now be perpetuated: McNab, Unionist; Truax, Laurier-Liberal.

The Union Government has officially recognized McNab as its candidate, and Sir Wilfred Laurier has recognized Mr Truax. Mr Truax, however immediately requested Laurier to withdraw his recognition, on the ground, we suppose, that he would rather be regarded as an independent.

There is one supreme issue in this election. It is The Military Service Act. It is: Shall the men who volunteered to fight in the most dreadful of all wars to save civilization, be sent reinforcement or shall they not.

Mr McNab stands for the Military Service Act and strong support of the army by selective draft. Mr Truax is "on the fence." He wishes to appear to be both for and against the Military Service Act That is why he does not want to be endorsed by Laurier. That would mark him as definitely against the Act, and rob him of the votes of those who want the country to stand by the soldiers. He wants to be in a position to tell one audience one thing and another story to another man.

When nominated Mr Truax defined his position as: Favoring conscription, and also favoring Sir Wilfred Laurier. That is, he favors conscription and he also favors getting into power a man who is opposed to conscription and would nullify it. Mr Truax's position, as stated by himself, is preposterous. It is ridiculous—impossible—it is the position of a man who doesn't want anything in particular but votes, and who is willing to do anything and pretend to be anything in order to get votes.

It is because of Mr Truax's doubtful attitude to the Union Government that a section of the Liberal party allied themselves with a large majority of the Conservative party to put in the field a safe supporter of the Government.

CANADA HAS ONLY 340,000 FIGHTING MEN

Before a large audience at Renfrew on Saturday, Hon N W Rowell made a telling appeal for re-inforcements, in which he dealt with statements casting doubt upon the actual need for more men. Replying to the question "Where are the four hundred thousand men who have gone across the sea?" he said: "More than four hundred thousand men have gone across the sea. Out of the actual number enlisted about 80,000 have been discharged from the forces in Canada on account of physical unfitness or because they were under age or over age, or for some other good reason. So far as fighting forces are concerned, we have never had even 350,000 men. I think the number of men who have gone overseas is about 340,000. Owing to the rigors of the weather at the front and the strain of modern warfare, a man has to be physically fit in every respect and trained to the highest point of efficiency, and therefore some thousands of those who went over were unequal to the task of occupying positions in the firing line. On the 9th of November we had a total available reserve for infantry re-inforcements in Great Britain and France of only 35,000 men, and of these a substantial number had not completed their training. Since the 9th of November we have sustained serious casualties, so to-night we have not got even 35,000 men available as infantry reserves. Previous to the victory at Passchendaele Ridge it was estimated those reserves would be sufficient to provide re-inforcements up to April next, but since that estimate was made they have been heavily drawn upon to fill up the gaps. My grave fear is that before even the first draft under our selective draft system is ready for the firing line our available reserves will be depleted and exhausted. With such a situation confronting us a referendum is useless, and we should not delay in calling the men up for service and sending them overseas, as this is no time to falter."

VILLAGE COUNCIL

A special meeting of council was held on 28th Nov. Members all present except Dr Houston.

Communications read. From T Brad shaw, city treasurer of Toronto explaining and eulogizing the Victory Loan.

From the secretary of the British Red Cross appeal thanking the contributors to that fund by residents of this municipality to the provincial Treasurer.

From the secretary of our local Fire Co expressing that company's opinion that the services of a night watchman are in the interests of this municipality.

Pearce—Logie—That Messrs Steele and Sparrow be a committee to measure the newly constructed sidewalk on Victoria St north in order to apportion the cost to the interested parties.—Carried.

Sparrow—Pearce—That a court of revision be held on Thursday 6th December next at 8 p m for the purpose of hearing appeals re cement sidewalk on Victoria St north.—Carried.

Actual Farmers to be Exempted

Gen Mewburn, Minister of Militia, authorizes the following official statement: "All farmers coming within Class "A" called out for military service under the provisions of the Military Service Act who are actually employed on a farm in the production of foodstuffs for Canada and her allies and whose services are necessary in the work of such farm, will be exempted from military service. Every claim for exemption is not allowed by a tribunal, an immediate appeal should be made. Arrangements are being made to extend the time for such appeals. If a farmer so called out for military service, who is honestly employed in the production of foodstuffs, should be drafted into the army, General Mewburn feels it will be his duty to relieve him from military service, on the condition that he returns to the farm and continues to be so employed."

BORN

KEITH—At Owen Sound, on Nov 27th, to Mr and Mrs D A Keith (nee Mellon McBeath), a son

DIED

JOHNS — In Greenock, on Nov 30th, William Johns, aged 91 years, 7 months and 13 days.

BROWN—At Lucknow, on Dec 2nd, Agnes Boyce, beloved wife of William Brown, aged 66 years, 2 month and 28 days.

LOCAL AND DISTRICT NEWS

With the Fliers in Texas

Charlie Mercer, son of Mrs Wm Mercer, joined the aerial corps at Toronto a couple of months ago, and is now training with them in the balmy temple in Texas

Dropped Dead

—Mr Robt Mooey, of 12th of Elderslie, died very suddenly on Tuesday afternoon, having dropped dead while walking across the fields with a neighbor on the way to G McLaughlin's sale. The deceased was about 53 years of age.

Death of Mrs. Wm. Brown

The grim reaper made an unexpected visitation to one of the best known homes of this district on Sunday morning, when Mrs Wm Brown passed away after having been stricken with paralysis the day before. The funeral took place on Tuesday afternoon and was very largely attended An obituary will appear in next issue.

Successful Evangelistic Meetings

The special services conducted in the Baptist church here by Rev V L Shantz of Chesley for two weeks resulted in a very successful evangelistic campaign. About twenty five persons of different denominations, mostly young people, were led to take a stand on the christian course Mr Shantz is an excellent speaker, who presents the gospel to his hearers without any sensational methods, and is also a good singer. The services were bright and uplifting. At the anniversary services on Sunday the church was crowded both morning and evening also a good audience for the afternoon.

Returning Officers to Take Soldiers Vote

Forty-four special returning officers and clerks are being appointed in connection with the taking of the overseas military vote. Twenty-two have been nominated by Sir Robert Borden and twenty-two will go on the nomination of the leader of the Opposition. Half of the special returning officers and clerks will go to Paris and half to London. To ensure fairness, it has been arranged that the special returning officer nominated by one party shall be assisted by a clerk nominated by the leader of the other party. No special returning officer will be permitted to deal with ballots or ballot boxes, except in the presence of two other persons, each the nominee of a different party.

Is Your Name on the List?

The commissioners have completed the revision of the voters' lists for the coming Dominion election and copies of the various lists are posted up. It is now for everyone entitled to vote to see for himself or herself whether or not his or her name is on the list. The qualification is the same for females as males. They shall be 21 years of age, British subjects and not Indians. They shall be either wives, widows, mothers, sisters or daughters of persons, male or female, living or dead, who are serving or have served, out of Canada in one of the military forces of Canada or of Gt Britain, or within without Canada in any of the naval forces of Canada or of Gt Britain in the present war. All appeals against additions to the list must be in by December 6th.

Must be True to Himself on the Supreme Issue

Mr C J Mickle, of Chesley, said at the meeting in that town addressed by Mrs Becker: "This is no time for a man to remember he is Liberal or Conservative. We must emancipate ourselves. The question is, shall Canada be re-inforced at the front? The new Government starts with a clean sheet, the Military Service Act being the only legislation for which it is responsible. For years I followed the great leader of the Liberal party, but I can't find where he wants to win the war. The day of voluntary enlistments is over and as I favored selective conscription on many platforms, I must be true to myself on the supreme issue. Holding up other issues is just throwing dust in our eyes. We must put all our strength into this war to save the world for civilization and humanity."

Death of Wm Jones

At the ripe old age of 91 years, Mr Wm Jones of Greenock hill passed away on Nov 30th. The deceased was a native of County Fermanagh, Ireland, and came to Canada at the age of 21. For some years he resided at Peterborough, Ont. From there he came to the County of Bruce in 1854, and settled on lots 3 and 4, con 1, Elderslie. On January 3rd, 1881, he married Mary Hodge, widow of the late James Jeffery. In 1897 they moved to Paisley, and have since lived on Greenock hill. He had been failing for sometime, but endured his illness with patience. During the last two weeks he became helpless when his niece, Mrs W J Fraser, formerly a nurse, of Buffalo, came and assisted in attending him. The funeral took place on Sunday afternoon, was private, in accordance with the wish of deceased. Rev L W Hall conducted the service. Besides his sorrowing wife, he is survived by one brother, Robert, of Brandon, Man, and one sister, Mrs W Gibson of Detroit.

Children Cry
FOR FLETCHER'S
CASTORIA

Thieving Epidemic

For some time past there have been numerous instances of pilfering in town. Wood piles mysteriously disappear, outbuildings were found empty, lumber piles faded away, contents of haymows and outbuildings were watched away by the night prowlers. The number of depredations of this class reported from time to time make up quite a list. Latterly there have been added the doings of poultry thieves, who are apparently operating on an extensive scale. We have heard of whole flocks of hens and turkeys taking wing in the wee sma' hours when birds usually are content to roost on their perch. It is said that auto trucks are in some cases discernable on the roadways close to the poultry pens on evenings following such raids. This is accepted as evidence that a gang is making a business of getting after fowl in this way. Such a method would be quite up-to-date. And what would be easier than for a buccaneering outfit to glide away ten or twenty miles from home and pick up a load during the dark hours of the night? However, it is only a matter of time until the guilty parties are caught and given their deserts. Detective work is being pursued that may lead to the apprehension of some of the outlaws.

A Woman's Burdens

are lightened when she turns to the right medicine. If her existence is made gloomy by the chronic weaknesses, delicate derangements, and painful disorders that afflict womankind she will find relief and emancipation from her troubles in Dr. Pierce's Favorite Prescription. If she's overworked, nervous, or "rundown," she finds new life and strength. It's a powerful, invigorating tonic and nervine which was discovered and used by an eminent physician for many years, in his large medical practice among women. For young girls just entering womanhood; for women in middle life, the "Favorite Prescription" is the only medicine put up without alcohol, and can be had in tablet as well as liquid form. It's not a secret prescription for its ingredients are printed on wrapper. Send 10c for trial package to Dr. V. M. Pierce, Invalids' Hotel, Surgical Institute, Buffalo, N. Y., or branch in Bridgeburg, Ont.

Hamilton, Ont. — "When passing through middle life, as is most cases of this kind, I began to fail in health. I had severe pains in my head, diary spells, my back ached and I had pains in my side. I became very weak and nervous. I took medicine without getting relief until I took Dr. Pierce's Favorite Prescription and this medicine built me on in health and strength and I came through this critical period in a good healthy state. Women will find Dr. Pierce's Favorite Prescription very helpful during this trying time."—Mrs. Sarah Cairns, 106 Bolton Ave.

The Canadian Farmer's Real Friend

YOUR letters will be answered, you will get the exact information you need, you will get the advice and assistance you desire free, provided by experts to whom we pay real money for the answer we send you, if you become a subscriber to FARMER'S MAGAZINE. This magazine is for—

The Men on the Farm

Helps them plan, and tells them how to construct barns, stables, sheep barns, hen houses, silos and dwellings.

Tells all about septic tanks, hydraulic rams, waterworks and lighting systems, power-farming.

Gives advice and information about feeding and breeding and the health of animals. About the business side of farming, co-operative methods, investments and insurance.

The Women on the Farm

Helps them in their home planning and making.

In their kitchen problems.

In matters pertaining to children—their health, reading and school.

Deals with styles, dress patterns and other feminine interests.

Gives help in gardening and flower culture.

Gives news of women's work.

For all it provides, stories, special articles on timely subjects by experts—not amateurs or experimenters; and the latest and most accurate information on every matter of concern to farmers.

FARMER'S MAGAZINE

has three times as many regular departments as are ordinarily found in farm papers, and is about the most satisfying paper you can get at any price. Subscription $1.00 per year.

EVERY issue of FARMER'S MAGAZINE is worth a dollar bill, because it is downright helpful in practical ways. The free advice and information it supplies on request—by private letter—may be worth many dollars. Have the FARMER'S MAGAZINE in your home as you would a hammer or a saw—an ever-ready and indispensable help. Have it for its friendship.

The price is One Dollar per year. Did we need it to vote, and result for it when we send you the bill. Address the publishers:—

The MacLean Publishing Co., Ltd., 143 University Ave., Toronto

Will Soon Have Oleo

Very soon everyone will have an opportunity of tasting oleo. Those who have used it say that it is O. K. and if it is there it has come to stay. The Scandinavian countries have been using oleo for many decades as a butter substitute. Denmark the most prolific dairy-producing country in the world, have used margarine for many years, and its consumption has not interfered with the production of better, one lots, it is claimed.

WOMEN VOTERS

The lists of voters for the Dominion election were hung up in the post office on Monday by the enumerators. Below are the names of women voters listed:

Paisley, No 1—Mrs (Dr) Allen, Mrs Bailey, Mrs S F Ballachey, Mrs W H Baker, Mrs Burchill, Mrs M J Bryce, Miss Birdie M Bell, Mrs G L Carter, Mrs G Craig, Mrs (Rev) Crighton, Mrs (Rev) Diehl, Miss Florence Diehl, Mrs Dobson, Mrs Dryden, sr, Miss Bella Dryden, Miss Mary H Dryden, Mrs W J Ellis, Mrs Fletcher, sr, Miss Margaret Fletcher, Mrs J S Fleming, Mrs D Forrester, Mrs Forrester, sr, Mrs Geo Fullerton, Mrs T H George, Mrs R Gregg, Miss Edna Hamilton, Mrs Thos Irving, Mrs G B Irwin, Mrs A Jack, Miss Sadie Jack, Mrs D A Lyon, Miss Mary A Martin, Mrs R Mewhinney, Mrs H Marshall, Mrs T Muir, Mrs D McArthur, Mrs Catherine McLeod, Mrs Flora McLeod, Mrs Rod McLennan, Mrs J C McIntyre, Mrs D McKenzie, Mrs J Parker, Miss Ethel Pearce, Mrs F Purdy, Mrs H B Putnam, Mrs Rolston, sr., Mrs Wm Rolston, Mrs F C Ryan, Mrs I Shoemaker, Miss Mary Sparrow, Miss Margaret Sparrow, Mrs I Stanley, Miss Mabel Stanley, Miss Annie Stanley, Mrs D Thompson, Mrs Morcom.

Paisley, No 2—Mrs W Archer, Miss Jessie Boyle, Miss May Boyle, Mrs Boettger, Mrs Cruickshank, Mrs Hepburn, Mrs Ethel McArthur, Mrs D McGregor, Miss Lottie McGregor, Mrs H E McGregor, Mrs J McPhail, Miss Margaret McVicar, Mrs (Rev) Neilson, Miss Mary Neilson, Mrs Isabella Neilson, Mrs J Shaw, Mrs D Sutherland, Mrs Tucker, Miss Lily Woods, Mrs T Yole.

Elderslie, No 1—Mrs W C Anstead, Mrs T O Brown, Miss Kathleen Brown, Mrs J Beaton, Mrs Deborah Brown, Mrs Wm Beach, Miss Sarah Daniel, Mrs S Fleming, Mrs W Hyde, Mrs Annie Johnston, Mrs Margaret Maxwell, Mrs R J McGill, Mrs Jane McLean, Mrs Etta McKinnon, Mrs W Rae, Mrs Tena Rae, Mrs M Sparrow, Mrs S Winch, Miss Alicia Winch.

DIED AT THE GUNS

CORP. JOHN HAMILTON

The following letter tells the brief story of how Corp. Hamilton met instant death while in action with his battery of artillery:

Belgium, Nov. 13th, 1917

DEAR MR. HAMILTON—It is rather hard for me to write a letter of condolence to you on the death of your son, Corp. J. L. Hamilton, but thought you might be anxious to learn how it happened. We were all very sorry to lose him, as he was a bright, cheerful chap, and certainly on the way to further promotion. He died at the time from the effects of an enemy shell. He never suffered a moment. We buried the body yesterday, a number of his comrades attending the funeral, after which our two trumpeters sounded the "Last Post." A large cross will be erected over the grave, which is registered, and of which you will no doubt receive particulars. Any further information I can give you do not hesitate to ask for. Again expressing my sorrow at your great loss, believe me,

Sincerely,
W. J. BRADSHAW, Lieut.
30th Battery, C.F.A.

A WONDERFUL PAPER

The Family Herald and Weekly Star, or Montreal, is a most unique paper and very popular in every home in Canada. It is a paper that is of value to the reader is contained in every issue. Few homes are without it and they are the losers in not having it. The subscription price is $1.25 a year, and includes a colored war map of the fighting area in Europe. It is a splendid map and of great assistance to understand the war. We understand the map offer is shortly to be withdrawn. The year's subscription and war map are certainly big value at $1.25.

Fined $200 and Costs

A citizen of Cargill was fined $200 and costs by Magistrates Jas Tolton and Robt Richardson in Walkerton on Thursday morning last for an infraction of the liquor law. This was the result of the mysterious disappearance from the Cargill station platform of two cases of whiskey which had been brought in on the night train and placed off at Cargill on Tuesday, Nov 13th, and which were consigned to a farmer of that section. The station agent who went in to report the departure of the train, returned a few minutes later and missed the booze. He suspected the defendant, and succeeded in getting cash settlement from him later for the departed moisture. The money was turned over to the farmer who lost the booze and who it seems, had ordered it for his sick mother. License Inspector White of Walkerton got wind of the affair, with the result that proceedings were started against the man who was alleged to have "lifted" the moisture. At the trial on Thursday the Cargillite admitted taking the booze and was mulcted with a fine of $200 and costs for having had liquor in his possession in a place other than a private dwelling house.—Herald and Times.

Farmers and Hog Production

There was a fine gathering of representative farmers in Port Elgin on Friday afternoon, when Mr Thomas, who is Mr Norman McKay, Bruce County Agricultural Representative, presented to the meeting the opportunities which the war presented for the raising of more hogs. Hearty co-operation was promised, after which it was decided that the township be organized. This was done, the following officers and canvassers being appointed: President, Geo Jamieson (Dobson); Secretary, Fred Elliott; canvassers for north—Wolf, Pearson, Gowanlock and Elliott; Shore Road—J McDougall, W Gowanlock; the Gore—Allen & Teeter; No 3 West—J Chute, Alex Bell, Albert Upshall, G Lawder, R Reed, H Tuck; No 3 Ward—A Lamont, Dan Cairns, W Howe, A Brunton, J Hillis; No 4 West—W Wallace, D Christie, A J Lamont, Chas Nelson, D Durrie.

Union Government

is concentrating its efforts to win the War. It has gone about raising reinforcements in the only practical way; under the Military Service Act, 1917.

Laurier, Bourassa and their adherents admit their intention of holding up reinforcements so urgently needed in the trenches.

Where do YOU stand?

To Back up the Boys—
To Hasten Victory—
To Win the War—

SUPPORT UNION GOVERNMENT

To Women Voters: Every woman may vote who is a British subject 21 years of age, resident in Canada one year, and in the constituency 30 days, who is the mother, wife, widow, daughter, sister or half-sister of any person male or female living or dead who is serving or has served without Canada in any of the Military forces, or within or without Canada in any of the Naval forces of Canada or of Great Britain in the present war, or who has been honorably discharged from such services and the date of whose enlistment was prior to September 20th, 1917.

Unionist Party Publicity Committee.

EXEMPTION BOARD

Following is the balance of list of applications dealt with to date. The Board resumes sittings this (Wednesday) morning:

DISALLOWED

John M Kincaid, farmer, Paisley
Robt W Johnston, stonecutter, Paisley
Clifford Majory, farmer, Elderslie
Milton Acton, farmer, Greenock
Alfred J Mussel, blacksmith, Chepstow

GREENOCK COUNCIL

Knox's Hotel, Pinkerton, Nov 26, 1917

Council met as per adjournment, all the members present, the reeve in the chair. The minutes of last meeting were read and adopted.

The following accounts were presented for payment: L Carscallia, 17 yds gravel, $7.70; Jos Hoeberger, 54 yds gravel, $5.40; A Kunkel, stamping, plowing, grading and 3 culverts, 18.25; S Hodgins, drawing tile from Paisley to Glanis, $4; S Bennett, 30 yds gravel on con 10 at $1.35 per yd, $27; Peter Kramer, cutting brush, $1.25, $2; John Cassidy, 13 cement tile for Hitchem road on lot 33, $21.60; P Vahd, jr, putting in cement tile on Hitchem road on lot 35, $10; A Fritz, 46 yds gravel per W Cousmas, $6.90; J D McCormick, 4 days repairing road, shovelling in gravel, $16; M M Schuster, two grader, $1.50, rag hoile $1.30—$2.80; H Pfahls, selecting timber, $4; J J Cassidy, $4.75; F Purdy, $4; Jacob Kroeplin, cutting brush, 500 & 400 rods at 5c per rod making 9 passing places, $25—$45; A E Knox, rooms for council meeting, $5.

Campbell—Sawyer—That the foregoing accounts being found correct be paid, and that the reeve and treasurer be instructed to sign cheques therefor.—Carried.

Gilchrist—Symon—That this council grant the sum of $500 to the British Red Cross, $200 to the Y M C A for work among soldiers, and the sum of $200 to be divided among the local Red Cross workers of Greenock, in the proportion of $1 to union collector to $2 to those wholly in the township, same to be paid in three grants, viz, Nov, March and July, on condition that the war continues to that time.—Carried.

Cheale—Sawyer—That orders be granted as follows: T W McGarry, Trans British Red Cross, $200; A S Hooper, Sec Y M C A, $200; Emma White, Kinloss, $25; L Cunningham, Glanis, $25; Mary Nelson, Go 10 Bruce, Mount Victory, Cargill, $25; Orson McDonald, Invermalle, $10; Mrs A Pinkerton, Pinkerton, $25; Mary Bell, Pine Wood, Hamilton, $25.

Sawyer—Gilchrist—That John Hall be paid $3.85 for damages to engine on con 1 op lot 7.—Carried.

A check was issued in favor of John Hall for $3.85.

A check was issued in favor of A Pinkerton for agricultural grant, $50.

Gilchrist—Sawyer—That this council abolish the statute labor system, and that the clerk be instructed to draft a by-law to be passed at next meeting confirming the same.—Carried.

Sawyer—Campbell—That the nomination meeting for candidates for the office of reeve and councillors for the township of Greenock be held in Pinkerton on Monday, Dec 10th, at one o'clock p.m.—Carried.

Symon—Gilchrist—That this council do now adjourn to meet at Chepstow on Saturday, the 15th day of December, 1917, for general business.—Carried.

THOS H PURDY, Clerk.

O Kelly. The meeting was most enthusiastic, and the sentiment patriotic, showing the farmers are willing to undertake greater responsibilities which the war has placed upon the production of the country and to contribute their share and more to every new undertaking now, to keep the ever-increasing effort to double the production. To help this production Mr McKay told the men that the government was co-operating to furnish them with cheap feed, such as mill feeds and corn. The duties on fertilizers are being removed, and he urged farmers to co-operate with the government and endeavor to bring the cheap feed into this district by the carload. Therefore, it was necessary to begin now to double up in breed sows.

MAXWELL

Most Miles per Gallon Most Miles of Tires

Ordinary Common Sense—Sensible Thrift—and Maxwell Motor Cars

Common sense says to you, "Buy a Maxwell Car and use it."

The American people are going forward—not backward.

That is the purpose of the great war in which we are now engaged.

The success of the Nation depends on healthy business activity over the country—and sensible thrift.

Healthy business depends on the utilization of every possible labor-saving, time-saving, money-saving device known.

The light-weight, economical Maxwell—in passenger service—taking you where you have to go on business, helping you relieve delivery congestion—is one of the greatest known labor-saving, time-saving, money-saving devices.

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Saving Labor.

We are feeling now the scarcity of labor. Another season this will be still more noticeable. We must therefore, start now to prepare for the labor situation at that time.

How can we do this? First by co-operating more intensely among ourselves. Each neighborhood planning as a whole the maximum use of certain farm machinery that may be too expensive to buy individually, as manure spreaders, silo cutters, feed grinders, ditch diggers, etc. It is economy to buy fertilizers in advance so they can be hauled and stored in the barn during the winter for spring and fall use. Each person should be able to know how much he needs. A great saving can be made by buying in carlots.

The planning of work far in advance will in many cases make many working days and possibly months difference in the course of the year's work. We should also plan on growing such crops that require the least amount of time for harvesting compared with the money and nutritive value. We should also plan on having such crops that will make use of a farmer's time as well as that of the hired help continuously, and not have all the work pile up at one time.

See that all machinery is well greased to prevent rust, housed as soon as not needed, as well as all repairs made, each machine being looked over very carefully to see if there are any worn parts that need to be replaced. One binder I saw this summer had been used every season for the last twenty years. It cut seventy-two acres of grain this year. It could not have done this if it had not been taken care of. Clean, oil and repair all harness. A well oiled harness will last twice as long as the one misused.

Make gates that are light, serviceable, easy to operate. Did you ever think how many minutes, as well as hard work, could be saved by having such gates? You get accustomed to seeing and using your own gate, but notice those of someone else. Some of you have spent hours, possibly days of valuable time during the busy season repairing fences, but only to a make-shift way to keep the cows out for the time, only to be compelled to do it again in a day or two. Such places can be fixed at odd times during the winter, and in many cases the loss of crops damaged by the cattle would have paid for the labor several times. Besides getting mad at oneself on account of one's own carelessness is hard on a person's morals.

Replacing a broken hinge, on the barn door, or putting a cheap fastener on it instead of using a prop may save minutes which, taken as a whole, are valuable. Repairing buildings, stopping cold draughts on the cattle saves feed because it makes the cows produce more economically.

Farmers as a whole have co-operated in their work more this year than ever before. There is a great difference, however, in the amount of work done with the same help in a given time on the different farms. One man is a hustler and had everything ready in advance, another takes plenty of time for everything and being unable to prepare for a certain kind of work until the moment it is needed, causes a great amount of wasted time.

The Dairy

Experiments carried out in recent years show that the falling off in milk supply from cows lying out is little or none as compared with those kept constantly tied up, provided the animals are well fed, and reasonable shelter is found. Animals which are allowed exercise get up a healthy circulation which enables them to withstand chills, and if they can get rough shelter they adapt themselves to the winds. Animals tied up in undue warmth during part of the twenty-four hours, and standing in cold draughts, such as are found in most cowsheds, are in a more defenceless condition. Ventilation and draught practically always go together and do not work harmoniously for the animals.

Animals are able to stand great cold with impunity so long as they can get under shelter to keep their skins dry, and can lie dry. It is the evaporation of moisture from an animal that causes chill, and consequently the necessity for sheltering hovels in lands and pastures. When topping up fattening cattle there is no doubt that meat is more quickly laid on when they are restricted in their movements; but in doing this the ultimate object is not in maintaining a healthy constitution for a lengthened period. It is not to be inferred from what has been said that animals should be left to face the full brunt of wet and wind, snow and frost, and the amount of shelter needed depends very much on the breed, and whether it is in its natural climate.

Food is the great defender from cold, and the colder it is the more is needed. A well-filled stomach, even though it be of coarse food with little food material, seems to act as a protection against cold, the bulk of warm substance acting as an inner lining against loss of temperature; but the increase of cold should be met by additional starchy or fatty matter, which when assimilated, will generate heat. The well-known experiment on pigs carried out years ago by Sir John Lawes showed what a large proportion of the food consumed went to maintain respiration, to which starch and oils mainly contribute.

Poultry

There are many late-hatched chicks now arriving at roosting age, and the trick of getting them safely to roosting without losses from crowding, overheating, and thus lowering their vitality, is no small problem.

Some helps that are saving losses among progressive poultrymen are poultry-wire covered frames that can be set in the corners of the brooder houses and brood coops to prevent the chicks from crowding into the corners when sleepy time comes.

Another similar help to be used later in getting the chicks to roost early are slatted or wire-covered portable bridges leading up to the level of the low roosts and so made that the chicks cannot get under, through, or behind the bridges and roosts. The chicks will then naturally walk up to the roosts when trying to get to their former sleeping place on the floor litter. It is important to place the low flat roosts just above the place where they have previously slept on the floor.

The first roosts for the youngsters can well be made in the form of a movable platform having the roosts two inches wide and a foot apart, and the entire under side of the roosting platform covered with poultry wire to keep the chicks from going down through and behind the roost to sleep on the floor. Even when hundreds of chicks are housed in one brooder coop, this plan will prevent them from crowding and overheating, since there is always air below and they will naturally prefer to sit on the roosts rather than on the uncomfortable wire.

Amused The King.

The King and Queen had an enthusiastic reception when they visited the Western General Hospital at Liverpool recently. One man, who had been first wounded at Mons, told the King that he had been visited after that battle by Lord Kitchener, who had said: "Well, well, bullet wounds don't matter much nowadays!" "But they ain't good for your health, your Majesty," said the veteran, while the King and those around him laughed.

Sheep Notes

It is quite possible for the farmer to establish a flock even at present prices and realize 50 to 70 per cent. profit on his investment during the first year. Intelligent care must be taken to prevent all undue losses in quantity and quality of mutton, lamb and wool.

The cheap but efficient wintering of the flock largely governs the annual income therefrom.

If infested with ticks, dip at once and thus save nearly one-half the winter's feed. The lousy sheep not only consume more feed and remain thin and weak, but produce less wool and that of a lower grade.

Unwashed wool worth 65 cents per pound, which is more than butter, cheese, beef, eggs or other perishable animal products, surely deserves proper care in preservation. Only the clean fleeces bring the top price. A few moments spent now in repairing racks, feed chutes and pens to keep chaff, dust and cobwebs from the wool, will be well repaid.

The sheep poorly wintered and allowed to become weak or sick produce weak lambs and a light fleece. This fleece is always of low value per pound due to weakness of fibre produced during the unthrifty period. Good wintering pays in every way.

Don't sell last spring's lambs in a light, unfinished state. Finish them for Christmas or Easter, and by thus marketing home-grown feeds, make $1 to $1.50 per lamb, over selling early in the unfinished state. Winter finish or fattening rations:—Roots (turnips preferable if there are any wethers) 4 to 6 pounds; or ensilage and roots, equal parts, 4 to 5 pounds; hay (clover and fine grass) 1½ to 3 pounds; grain mixture as follows,—

1. Oats, 3 parts, bran, 1 part; corn, 1 part.
2. Oats, 4 parts; bran, 2 parts; oil-cake, ½ part.

Start with ¼ pound per lamb per day, finishing with 1 pound per day. Elevator screenings, as sold from government elevators, containing a minimum of blackseeds (mustards, etc.) are economical in the grain ration. Various grades of these screenings such as scalpings, buckwheat screenings, etc., may also be the cheapest grain for cattle and swine.

Never confine sheep too closely in winter. Leave doors on protected side of shed open at all times. Overheating is the direct cause of colds, pneumonia, shedding of fleeces and similar troubles which are often fatal.

Hogs

In the growth and development of hogs it is important to kill the lice. Crude oil is effective for this purpose, for it not only kills the lice but also destroys the nits and makes the skin and hair of the hog soft and bright.

There are many hog dips on the market, but many of these are unsatisfactory. Crude oil has been found to give better results. This oil may be applied by the use of patent hog oilers, but as a rule these are not satisfactory, for they are expensive and many do not apply the oil evenly.

One of the most satisfactory methods of applying crude oil is to drive as many of the hogs as possible at one time into an inclosure having a cement floor. Oil may then be applied to the hogs with an ordinary sprinkling can. The hogs will rub against each other and thus distribute the oil evenly. The hogs should not be let out of the enclosure until this is done.

Apple Dumplings.—Make a crust as for biscuits, using suet instead of butter. Roll to a quarter of an inch. Cover with a layer of finely sliced apples. Sprinkle over with sugar and cinnamon. Sew this into cheese cloth as for Rolly-Poly. Fasten the ends. Plunge into boiling water, and boil rapidly forty minutes.

GOOD HEALTH QUESTION BOX

By John B Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

The first four years of life are the human formative period

FROM 18 TO 24 MONTHS.

Four meals daily: 7 a.m. Cornmeal, hominy, oatmeal, with butter and sugar or milk and sugar or butter and salt. A soft boiled egg every 2 or 3 days. Minced chicken on toast occasionally. A drink of milk. Bran biscuit and butter or stale bread and butter. When egg or minced chicken are given cereal in smaller proportion or cut out. 9 a.m. the juice of an orange. 11 a.m. Rare beef, minced or scraped; the heart of a lamb chop finely cut. Minced chicken. Baked potato, spinach, asparagus, squash, strained or stewed tomatoes, stewed carrots, mashed cauliflower. Baked apple or apple sauce. Stewed prunes. Stale bread and butter. Sample dinner. Lamb chop, baked potato, stewed carrots, baked apple, stale bread and butter. After the 21st month well cooked string beans may be given.

2.30 p.m., Chicken, beef or mutton broth with rice or with stale bread broken into the broth. Custard, corn starch, plain rice pudding or junket. Bran biscuit and butter or stale bread and butter. 6 p.m. Farina or cream of wheat (each cooked 2 hours); from 1 to 3 tablespoonsful with milk and sugar or butter and sugar or butter and salt. Drink of milk or malted milk or weak cocoa. Zwieback or stale bread and butter. Wheataworth biscuit.

After 18 months many children will have better appetite and thrive more on 3 full meals the day, at 7 a.m., 12 o'clock, and 5.30 p.m. At about 3 p.m. a cup of broth and a cracker or toast or a drink of milk may be given if it does not take away the appetite for the evening meal.

The oatmeal, hominy and cornmeal above mentioned should each be cooked 4 hours the day before they are used. The cereal should then be of the consistence of thin paste. This is strained through a colander and should form, on cooling, a jelly like mass.

QUESTIONS AND ANSWERS.

Large as a 2 Year Old.

Will you kindly send me a feeding schedule for my 13 months old baby. He is very healthy and as large as a two year old. 2. Would you advise taking the bottle from him entirely? Does a baby at his age require one or two naps a day?

Answer—Read to-day's article. 2. By all means. Babies should be weaned at 12 months. 3. Better two naps. He will most likely take them anyway. Babies seem to have just about three functions in life. Take nourishment, sleep, and wriggle when neither eating or sleeping.

Fracture of Collar Bone.

In case of a broken clavicle on an athletic field what should be done before the doctor comes? 2. What is the length of time required to repair the break.

Answer—Put the sufferer flat on his back, arms by his sides, no pillow but rather a cushion under the spine so as the shoulders shall be thrown back as far as possible. 2. About six weeks.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

Willie thought the skating fine,
Didn't see the danger sign;
Till—kersplash—and he was in,
Icy water to his chin.

MY CHRISTMAS DINNER

A Delicious Menu That Covers These Points: Home Production, Economy, Patriotic Food Conservation.

By A Country Woman

Somebody said "Christmas" and I woke to the fact that Christmas dinner this year cannot be as it has been in our family. The food shortage has changed conditions for all of us. Being a patriotic woman and having a patriotic family I am shaping our days to these new conditions and so must make the Christmas Day as patriotic as possible.

In the first place we are not spending as much money on ourselves as we have felt we had a right to do in pre-war years. There are too many calls for help for the Red Cross, Victory Bonds and all our own community work. Therefore my Christmas dinner must be planned not to cost too much. Instead of going to town to buy dainties, canned and otherwise, the home feast this year will be from strictly home-grown products. Just as I came to this decision my flock of geese waddled past the window and I decided the chief part of my menu, goose. I cannot feed the big birds with expensive grain.

As I picked out the fattest of the flock I recalled that this patriotically planned dinner must fall closely in line with Mr. Hanna's counsel to us housekeepers to conserve fats, meats, sugar, wheat. The goose will furnish all his own grease and grease to spare for shortening for many days to come.

Patriotic bread appears daily on our home table and as we like white bread for gala occasions I will use the yeast oatmeal bread. The color is white although the usual amount of white flour is reduced.

At this point I took a mental walk among my stored foods for I know that we can have a delicious dinner and yet be economical, conserve the necessary products according to Mr. Hanna, use home products and—oh, spell eat correctly. I try to remember that three times a day and shall be happy when I have made a perfect habit of thought along this line.

Goose—there is my muscle builder and my fat product; patriotic bread—there is my starch content; I will have apples with the goose and a fruit salad and—for those who like it, a fruitade—these are from the group depended on for mineral matter, vegetable acid and body-regulating substances: potatoes, onions, canned pears, hickory nuts, all home products give me more foods in the other groups and take care of the sugar-group. I can use honey to make my salad dressing, saving sugar.

Look over my menu as it is going to be and congratulate me on having covered all the points: economy, food conservation, home-production, patriotism, deliciousness.

Roast Goose with Stuffing
Cinnamon Apples Browned Potatoes
Creamed Onions
Patriotic Bread
Pear Salad with Honey Dressing
Brownies with Coffee or Fruit Drink
Hickory Nuts

Roast Goose

Select a bird of weight to allow about one pound to each person to be served. Dress and scrub inside and out with warm water in which baking soda has been dissolved. Rinse well in boiling water and dry with clean towels. Stuff and tie into shape. Rub the outside with flour mixed with salt and pepper. Place in roasting pan with breast down. Baste frequently with pan drippings. Add one cupful of water to the pan after the first half-hour of roasting.

To determine time for roasting allow one-half hour to each pound.

To make the gravy, skim off as much as possible of the fat in the pan. Thicken the liquor that is left with flour, first wet with a little cold milk and stirred until perfectly smooth. Add boiling water gradually to make the gravy the right consistency.

Stuffing for Goose

2 cupfuls bread crumbs, 2 cupfuls stewed apples, 1 cupful currants, ¼ teaspoonful salt. Add the stewed apples to the bread crumbs, mix well, add the salt and the cleaned currants.

Cinnamon Apples

These are used as garnish for the goose. 2 cupfuls sugar, 1 cupful water, 6 medium-sized firm apples, 1 teaspoonful red cinnamon candies.

Boil the sugar and water together for five minutes, add the candies. Core and peel the apples and put into the syrup. Cook very slowly until the apples are tender but not until they break or mash. The red candies give color and flavor. Let the apples stand in the syrup until ready to use. They should be clear and a bright red color. Serve round the goose on platter. Give one to each guest with the helping of goose.

Creamed Onions

Boil rather small white onions until tender. While hot pour over them for each cupful of onions, one-half cupful medium white sauce. The sauce may be prettily garnished with finely chopped fresh or finely sifted dried parsley, one level tablespoonful to each half cupful of sauce.

Patriotic Bread

1 cupful liquid, 2 tablespoonfuls sugar, 1 tablespoonful fat, 1 teaspoonful salt, ¼ cake compressed yeast softened in ¼ cupful liquid, 1 cupful rolled oats, 2½ cupfuls wheat flour. This proportion makes one loaf of bread.

Scald liquid and pour over rolled oats, sugar, salt and fat. Let stand until lukewarm. Add yeast softened in warm water. Add flour and knead. Let rise until double its bulk. Knead again and place in pans. When light bake forty-five minutes to one hour in a moderate oven.

If dried yeast is used, a sponge should be made from about one-half cupful liquid taken from the amount given in the proportions, and some of the flour. This is allowed to rise before adding the oatmeal and the white flour.

Pear Salad with Honey Dressing

One-half of a large canned pear or two halves if the pears are small.

The Dressing

3 egg yolks, 1-3 cupful extracted honey, 1-3 cupful vinegar, pinch of salt, whipped cream. Beat the egg yolks slightly. Add the honey, salt and vinegar. Cook in double boiler until it thickens. Beat with egg beater as it thickens in boiler so that it will be smooth. Set away to cool. Before serving fold in a moderate amount of whipped cream just before adding to the salad, remembering that we are all now economizing in the use of cream. Garnish with canned red cherry or cranberry on top.

Honey Brownies

1-3 cupful shortening, ½ cupful extracted honey, 1-3 teaspoonful soda, 1 egg, 1 2-3 cupfuls flour, ¼ teaspoonful salt, 1 square melted chocolate, 2-3 cupful raisins, 2-3 cupful chopped nuts. Warm honey slightly but do not let it get hot. Add the soda and then the shortening. Beat well. Add the well-beaten egg, the melted chocolate, then the flour and salt sifted together, and lastly the raisins and nuts cut and floured. Stir stiff, adding more flour if necessary. Drop by spoonfuls on well-greased tins and bake in a moderate oven.

Fruit-Juice Drink

Use lemonade, grape fruit juice or a combination of juices, such as grape juice with lemon juice. Crab-apple jelly and grape jelly can be boiled together with a little water, strained, seasoned with the juice of lemons. Any unspiced, acid fruit juice can be used to make a delicious fruitade.

We shall have the simplest of refreshments for our third meal on Christmas Day.

Bread-and-butter sandwiches, the bread cut very thin, will be the principal item. Day-old bread is necessary for these. Part of the sandwiches will have jelly or peanut butter or a touch of salad dressing substituted for butter.

Hot coffee or tea for those who must have it, milk or a fruit drink, will be served by one of us seated or perhaps we shall just let each one help himself.

Doilies take the place of the table-cloth and only plates and spoons, cups, saucers, glasses and napkins are needed.

Make Bees Work Overtime

Plans are being worked out in California whereby at the end of the honey-gathering season bees will be transported to a new region where flowers are blooming to see if they will continue their work and thereby increase the output.

in preventing waste by demanding the whole wheat in breakfast foods and bread. **Shredded Wheat Biscuit** is 100 per cent. whole wheat grain prepared in a digestible form—contains more real nutriment than meat or eggs or potatoes and costs much less. Serve with milk or cream, sliced peaches, bananas or other fruits.

Made in Canada.

A WAR WITHOUT ILLUSIONS.

As Seen By a Young American of the Field Service.

To most of the young soldiers who are fighting in France war has no illusions, but they are none the less determined to see it through. One who is an assistant chief of his section in the American Field Service writes thus to a friend in his home town:

"I had thought of war as an impressive, triumphal onrush of cavalry; I had associated with war the flare of trumpets, the roll of drums, the knitting of socks and sweaters, the singing of the national anthems and the steady tramp of feet to the tune of 'Tipperary.'

"But this war is the most stupendous, grim, hard-headed business proposition that the world has witnessed. The partners go about the business heralded by no trumpets, with but little music in their hearts, but with the determination that success shall crown their efforts. This is the least ostentatious of businesses; it is a great war, in which the prime factors are money, men and transportation, and the cardinal conditions of success are patience and stern determination. This is a war of drab, of dirty gray smut—wholly unlike the old wars of gold, tinsel and blood red.

"And yet the blood red tint is the very element with which my work must reckon. Instead of the cure of huge guns, the march of reinforcements or the observation of enemy operations from the air, my work is with the bloody freight of the trenches after the attack, with the wounded and dying. I see these men going up to their work in long lines or trucks—silent, thoughtful men, full of determination; I see them in their trenches, seemingly listless, fatalistic in their attitude; but I work with them shortly afterward when they are brought into the little underground 'poste secours' on stretchers, borne by brancardiers, where their wounds are dressed and where they are loaded into our ambulances, to be sent back a mile or two, either to be hatched up for further use or to expire under the kindly benediction of their Mother Church. And through it all there goes that grim set jaw and fighting determination which meant for France the superb victories of the Marne and Verdun. With never a groan where the roads are rough or when shells make travel impossible, but always a faint smile of gratitude at the end of the painful journey—and often a hand clasp—these men are worthy to be masters of others because so splendidly masters of themselves."

PERPETUAL MOTION.

Most Unceasingly Active Member of Body is the Tongue.

She's discovered the secret of perpetual motion," I heard one man say to another the other day. "Her tongue's never still!"

He laughed as he said it; but his remark was one of those true words spoken in jest.

But women are not alone in the possession of an ever-wagging tongue; men are equally guilty. Nobody's tongue is still for a moment. It is the most unceasing active member of the body.

It moves when one speaks, it moves when one eats, it moves when one swallows saliva. When eating it is constantly feeling about the mouth, and deciding which particles of food are small enough to be swallowed, and which are not.

The tongue has a sense of touch which is wonderful in its sensitiveness. We think of our finger-tips as our most sensitive organs of feeling, but they are badly outclassed by the end of the tongue.

How to Purify the Blood

"Fifteen to thirty drops of Extract of Roots, commonly called Mother Seigel's Curative Syrup, may be taken in water with meals and at bedtime, for the cure of indigestion, constipation and bad blood. Persistence in this treatment will effect a cure in nearly every case." Get the genuine at druggists.

THE BOYS' ROOM.

By Louise Morey Bowman.

The sunshine was spattering over the floor
In a frolic of golden rain,
And the little green leaves were whispering
And tapping outside the pane.
There were their college banners and books;
And, hung on the plain gray wall,
Sir Galahad, shining and tall,
Waiting there for his vision,
In the dream-filled days of yore.

But now they have seen a vision
And shall they come back no more?
Through the open door
I heard the step of the brave little brown-eyed mother,
And though she smiled on the threshold,
In her eyes the big tears gleamed.
"I've been such a happy woman!
We've always dreamed
That little grandchildren might come some day,
And get out the old toys, and romp and play
Just as they used to. But now, you know,
There is something far greater than that, and, oh,
Sometimes one almost grows afraid to dream!
"Fred writes, 'You taught us to "Follow the gleam",
With gay old Galahad there on our wall.
Cheer up, mother. This life's not all'.
Think of Fred—our joker—writing that. Well,
We must go down to lunch, dear. There's the bell."

And so we silently closed the door,
And left the room as it was before,
With the sunshine spattering over the floor
In a frolic of golden rain,
And the little green leaves a-whispering
And tapping outside the pane.

But now when we talk of the war, I see,
Above the horrible, death-filled gloom
That rises before me, "the boy's old room"—
A vision whose beauty shall never pale:
A temple that still guards the Holy Grail.

—From The Canadian Magazine for November.

SERIOUS ILLNESS AVOIDED

Many a serious illness has been avoided by the prompt use of Dr. Williams' Pink Pills. These pills actually enrich and purify the blood, and in this way build up the system, tone and strengthen the nerves and invigorate the vital organs.

Serious disorders generally come from some simple disorder that has been neglected. Therefore any thinning of the blood should be looked upon as a warning sign, and more serious illness should be avoided by the use of Dr. Williams' Pink Pills. In the case of young girls and women the blood is peculiarly liable to get out of order—to become thin and watery—and to lead to a general breakdown in health. This can be avoided by the occasional use of Dr. Williams' Pink Pills, which are suitable for the most delicate constitution. These pills will give you a new appetite, improve your digestion, tone and strengthen weakened nerves, banish depression and lack of energy, clear the complexion of pimples and blotches, cure pain in the back and general weakness, cause the disappearance of headaches, dizziness and heart fluttering. Give these pills a fair trial and you will soon note a wonderful change in your condition. Your spirits will brighten, good health and strength will return, and you will feel like a new person. You can confirm these statements by enquiring among your friends almost anywhere, as thousands and thousands of hopeless sufferers have been restored to new health and energy by using Dr. Williams' Pink Pills.

You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

PRESCRIBING BY WIRELESS.

How Physician Saved a Life a Thousand Miles Distant.

The captain of a tramp steamer in the Gulf of Mexico was lately taken ill with ptomaine poisoning. With death staring him in the face, on account of inadequate medical aid, he decided to call, by wireless, for assistance from the physicians at a naval station a hundred miles away.

In the event the message was picked up by a liner seven hundred miles away, and the ship's surgeon made all haste to reply to this strange "S.O.S." with a full and detailed prescription, which was without much difficulty made up from the tramp steamer's medicine-chest, and the captain's life was saved.

A fireman on a Canadian Pacific liner which carries no surgeon was attacked in mid-ocean with internal hemorrhage. Wireless communication was secured with an Allan liner, and details of the symptoms transmitted across a thousand miles of ocean. A prescription was not only received, but daily consultations took place for some time, and the medicine was "changed" several times.

New Designs You Will Like

A COMPLETE BOYCOTT.

People of Alsace-Lorraine Have No Dealings With Germans.

The Germans have lately been trying to make out a case for the retention of the stolen provinces, Alsace and Lorraine, on the ground that they are pro-German. But there never was a worse case in the history of man. For forty years and more the Germans have tried repression, terror and bribery, but they are further from reconciling the Alsatians and Lorrainers to their rule to-day than they were in 1870.

The Alsatians and Lorrainers do not recognize the German. He does not exist for them. They pass him in the street as if he were invisible. If the Germans get up a fete, a ball, a concert, Germans alone are seen there.

Even the parks and tea-gardens chosen by Germans as their resorts are out of bounds to the natives of the provinces. No German ever gets across the doorstep of an Alsatian or Lorrainer except at the point of the bayonet or sword, or, if there should be such admission, the family is henceforth outcast, pariah.

Occasionally love steps in, as it will, and makes a breach. Some young German falls in love with an Alsatian maid and wins her affections and marries her. She goes to her nuptials alone. Henceforth that girl is a stranger.

ANY CORN LIFTS OUT. DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers—it's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone, tell him to surely get a small bottle for you from his wholesale drug house.

THE HAPPIEST LIFE.

Is Found in Adaptation to Existing Conditions.

Success and happiness depend upon the way in which we adapt ourselves to the realities of objective life. If we fight against change—and change we must meet at every turn and in every department of life—we soon become exhausted, wear ourselves out and sink back into ourselves—into the subconscious—and fail and grow old before our time.

If we cling to past experiences, refuse to live in the present, let our faith die when disappointments come, the results are the same. The life forces ebb and we sink into the great sea of the unconscious and are on the road to being submerged.

Desire, will, concentration, purpose, faith—these can be applied to keep up living in the present, to keep our enthusiasm active and our creativeness expressing.

THE ONLY MEDICINE FOR LITTLE ONES

Mrs. H. Blanche, St. Pamphile, Que., writes:—"I have obtained great results from the use of Baby's Own Tablets. They are the only medicine I know of that one can depend upon to promptly cure bowel and stomach troubles." The Tablets never fail to relieve the little one and besides the mother has the guarantee of a government analyst that they are absolutely safe. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

DANCING OSTRICHES.

A Strange Sight on the Sandy Plains of Southern Africa.

One of the oddest sights on the sandy stretches of plain in southern Africa is a party of waltzing ostriches.

A writer on the subject thus describes their queer antics: "When there are a number of them they will start off, and, running a few hundred yards, will stop and, with raised wings will whirl rapidly round till they are stupefied, or perhaps break a leg.

"The males pose also before fighting. They kneel on their ankles, opening their wings, and balancing themselves alternately forward and backward, or to one side or the other, while the neck is stretched on a level with the back and the head strikes the sides, now on the right, now on the left, while the feathers are brist'ed. The bird appears at this time so absorbed in its occupation as to forget all that is going on around him, and can be approached and caught.

"The male utters a cry, which sounds much like no effort to speak with the mouth shut tight."

GIRLS! LEMON JUICE IS SKIN WHITENER

How to make a creamy beauty lotion for a few cents.

The juice of two fresh lemons squirted into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands.

Preserving Overshoes.

Cutting a heel-shape piece out of an old overshoe and pasting it in the heel of new overshoes prevents the heel wearing out while the rest of the overshoe is comparatively new.

TORONTO FAT STOCK SHOW

One of the coming events which all live stock men and farmers should not miss is the Toronto Fat Stock Show, to be held at the Union Stock Yards, on Friday and Saturday, December 7th and 8th. The Auction Sale always brings record prices, and it is well worth your time to see the competition among packers and butchers for the prize winners. Entries for this year's show are larger than ever.

Imitate Britain.

The talk of learning by Britain's "mistakes" makes one tired, says, an American writer. Of course, she has blundered here and there—we do not need to copy the admitted errors. But if we will take note of the way she puts in the field first-class fighting men and keeps them at the top-notch of efficiency by the most careful regard for every phase of their welfare, we shall do better than if we pay heed merely to the places where the system now and then has broken down or the individual has performed disappointingly.

An automatic valve has been invented that sounds a whistle when an automobile tire contains either too much or too little air.

Minard's Liniment Cures Diphtheria.

ROYAL YEAST

Has been Canada's favorite yeast for over a quarter of a century. Bread baked with Royal Yeast will keep fresh and moist longer than that made with any other, so that a full week's supply can easily be made at one baking, and the last loaf will be just as good as the first.

Marriage and Talk.

It is only when people are different that they have a great deal to say. When they are alike they are satisfied just to be in each other's company. As married folk gradually exchange ideas and reconcile their differences their conversation is apt to give way to a contented and sparing use of verbal shorthand. A marriage of long standing that is still noisy with constant talk is not one to be envied. It argues an irrepressible conflict.

Those Last Dear Moments.

Each at her post we women stand;
Mine is the safer, easier part—
And yet there is an iron hand
Of envy round my heart
For her, the weary nurse who spent
Those last dear moments at his side,
The woman who in pity bent
And kissed him when he died.

—Amelia Josephine Burr.

Minard's Liniment Co., Limited

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of La Grippe, and I have frequently proved it to be very effective in cases of inflammation.

Yours,
W. A. HUTCHINSON.

Characteristic Suggestions.

A gentleman who had a good collection of china, deploring to his friends the carelessness of a manservant whose fingers, as the Scotch would say, "were all thumbs," said he did not know what to do with him.

"Why not dismiss him?" said the practical Englishman.

"But he is a good servant," said his host.

"Stop it out of his wages," said the Scotsman, with the excellent caution of his race.

"But," said the master, "he breaks more than his wages would pay for."

"Why not raise his wages?" asked the Irishman.

Minard's Liniment Cures Colds, &c.

Frocks of a delicate color always look better if washed in bran water, no soap being used.

Potato Chowder.—¼ lb. salt pork, 6-10 potatoes, 1 onion, 1 tablespoon chopped parsley, 1 tablespoon flour, 1 tablespoon dripping, 1 pint milk, 1 teaspoon salt, ½ teaspoon pepper. Cut pork and potatoes into cubes and cook with the seasonings, and sufficient water to cover until done. Make the white sauce of the fat, flour and milk. Drain off the surplus water when the potatoes are cooked, add the white sauce and reheat.

CUTICURA HEALS ITCHY SCALP RASH

That Burned and Pained Four Years. Hair Came Out. Loss of Sleep.

"My scalp was red and very itchy, and a fine rash developed which burned and pained incessantly. This seemed to destroy the hair roots, causing my hair to come out, which disfigured the top of my head. It also caused loss of sleep. "The trouble lasted four years. Then I sent for a free sample of Cuticura Soap and Ointment which encouraged me so I bought more, and I had one cake of Cuticura Soap and one box of Ointment and I was healed." (Signed) John Cunningham, Church St., Antigonish, N.S., April 4, 1917.

Why not make Cuticura your everyday toilet soap and prevent skin troubles? Absolutely nothing better.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

Outdoor Workers

are subject to exposure to all kinds of weather, and strenuous outdoor work brings the rheumatic aches. You can't afford to be laid up, so heed that first twinge of rheumatism. Use Sloan's Liniment. Clean and convenient, no need to rub, no staining, no clumsy plasters and your pain disappears.

Sprains, strains, neuralgia aches and ails, sore muscles are all relieved by the application of Sloan's Liniment.

Generous size bottles at all druggists, Price, 35c., $1.00.

"The Hardware Store of Better Values"

SECOND CON ELDERSLIE

Town Hall Paisley, Friday evening—"The Heart of Berry" by Southampton Dramatic Co.

Born—On Nov 21st, to Mr and Mrs Wilson Patterson, Jr, a son.

Alex Keith is engaged with A Davison, at the saw mill.

W J Allen is in Toronto on a business trip.

Reeve Cam and R C Pearce canvassed this con. for the Victory war Loan.

Mr and Mrs Goholm and family who have been living on the Ankenman farm have moved to Kitchener.

A prayer meeting was held at the home of Mr and Mrs Alex Campbell last week.

W J Allen and D McBeath have been canvassing here to try to induce the farmers to raise more hogs.

Messrs Geo Addison and Chas Allen have installed gasolene engines to pump water for stable supply.

The trustees and teachers of S S No 2 are to be congratulated on the success of the Red Cross box social held in their school on Nov 23rd. There was a large turnout to hear the programme which consisted of choruses by the school children, dialogues and tableaux by the grown-ups and several other selections of vocal and instrumental music. Wm McDonald, M. P. P., acted as chairman and gave a short address. R C Pearce auctioned off the boxes which sold pretty brisk and the nice sum of $94 was realized, which is all to be devoted to Red Cross purposes.

PINKERTON

"The Heart of Berry," a comedy funnier than Tom Marks, town hall, Paisley, Friday, Dec 7th. Proceeds for Red Cross.

Messrs Harvey Pinkerton and Roy Alexander returned from the west on Friday.

Rev R M Gale visited in Kitchener last week.

Alex Russell held a very successful sale last week. He and his sisters are now living in Pinkerton.

Mr and Mrs Archie Campbell received the sad news on Friday morning that their second son, Henry, had been "killed in action." Henry enlisted in a western Battalion and has been at the front for some time. The sympathy of the entire community goes out to the bereaved mother and father, sisters and brothers.

The casualty list of Friday contained the name of a former Pinkerton boy as "killed in action," in the person of Mervon Shore, son of Rev A Shore, former pastor of the Anglican church here.

The Pinkerton Red Cross society wish to thank the Greenock council for their donation of $50.

Senator Donnelly has bought a large amount of bush from Wm Pinkerton. Harvey Garland has the contract of taking it to the mill.

Lloyd Pinkerton and bride returned home last Monday from Detroit where they spent their honeymoon. The best wishes go out to the happy young couple.

GRESHAM

Southampton Dramatic Club, in a three-act comedy, "The Heart of Berry," town hall, Paisley, Friday evening, Dec 7th.

We are pleased to report that George Koppel, who was very ill, is improving.

Miss Phemie Kelso was visiting with her sister, Mrs McArthur, last week.

Miss Marie Mewhinney leaves this week for Walkerton, where she will visit for a time.

Contractor Jas A McKinnon is home from Southampton.

Neil McDonald shipped a load of cattle to Toronto last week.

Wm Dent, who has enlisted, is visiting at his home here. Mr Dent left his business in Palmerston to do his bit for king and country as an artilleryman.

We are pleased to report that Robert McKay is improving nicely.

Thomas E Curry is around taking the list of voters, and A McLean in the interest of the war loan. Both officers are bachelors, and are hustlers.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the signature of Chas. H. Fletcher

ELORA ROAD NORTH

Town Hall, Paisley, Friday evening—"The Heart of Berry," by Southampton Dramatic Co.

Miss Rose Beech is home again after two years spent in Wisconsin.

Miss Lillie McDougall is home from Lucknow.

Mrs Elizabeth Miller, a former resident of Petticoat Lane, died at her home near Burgoyne.

Messrs A A McLaren and Wm Lawrence of Wiarton called on Elora Road friends last week.

Mr W A Miller has returned from the west.

Mr Stuart Winch was down to Harriston to be examined, passing in Class A.

Mr Harry Rudolph shipped a car load of stales to Toronto last week.

GLAMIS

Southampton Dramatic Co, in a three-act comedy, "The Heart of Berry," town hall, Paisley, Friday evening, Dec 7th.

A memorial service will be held in the Presbyterian church on Sunday morning in memory of the late Thos Wood, son of David Wood, who was killed in action in France. The Baptist congregation will unite in the services.

Col Hugh Clark will hold a political meeting in Glamis on Monday night, and his opponent, John McAuley of Wiarton, on Tuesday.

Mr and Mrs Groves have returned from their wedding trip, and will now take up housekeeping on their farm on the boundary.

Mrs Tufford, of Beamsville, is visiting her parents, Mr and Mrs W J McKeeman.

Mr McIntosh and family, of Tiverton, spent Sunday afternoon at Joe Cunningham's.

Miss Mary Clark is visiting at John McKinnon's on the 10th.

Miss Daisy Cronin is spending this week with friends in Kincardine.

CANTIRE

"The Heart of Berry," Town Hall, Paisley, Friday ev'g. Fun and frolic.

Politics are very quiet here considering the nearness of election day. The fact is, the people are not very enthusiastic for either candidate. It seems to be a case of two evils, and the difficulty lies in choosing the least.

Inspector McCool paid a visit to our school on Friday last and gave a splendid report.

Mr and Mrs Herb Walpole, of Williscroft, visited friends here one day last week.

We are sorry to report that Hector Bell is under the doctor's care at the present time.

Mr and Mrs Neil McAllister, of Paisley, were visitors at the home of the latter's parents, Mr and Mrs Johnston, on Friday of last week.

Those who heard Rev Mr Amos, of Palmerston, preach at the anniversary services at Gillies Hill last year, will be delighted to know that he has again consented to be present this year and will no doubt draw large congregations.

UNDERWOOD

Southampton Dramatic Club, in a three-act comedy, "The Heart of Berry," town hall, Paisley, Friday evening, Dec 7.

L O L No 1123 did not hold their annual meeting till Thursday night, Nov 29th, owing to the funeral of the late W C McFadden on Tuesday afternoon. The meeting was largely attended. An interesting letter was read from Bro (Pte) W M Dobson, 160th Bruce Batt, England. The following officers were elected and installed for the coming year: W M, Wm Nelson; D M, Ben Vennard; Chaplain, John Nelson; Rec Sec, John Dobson; Fin Sec, A Smith; Treas, Thos Nelson; D of C, Jos Vennard; Lecturer, Wm Dobson; 1st Com, D U Morrison; Jas Com—, Summers, Y Brown, C Robinson, Jas Dobson. A letter of condolence was sent to Mrs Val Cottrill in the loss of her beloved husband and our late brother.

Children Cry FOR FLETCHER'S CASTORIA

TURNERS

"The Heart of Berry," a comedy funnier than Tom Marks. Town Hall Paisley, Friday, Dec 7th.

Mrs Hall has returned to her home in Guelph after spending a few weeks with her brother and sister here.

Miss Megraw our teacher is improving after her operation.

Messrs Jamieson and Reoch are pressing hay here for Karcher and Schwab who are buying and shipping from the station here.

Mr Russel Black of Calgary is here visiting his uncle.

RHEUMATISM WAS MOST SEVERE

Dreadful Pains All The Time Until He Took "FRUIT-A-TIVES".

MR. LAMPSON

Verona, Ont., Nov. 11th., 1915.

"I suffered for a number of years with *Rheumatism and severe Pains in Side and Back*, from strains and heavy lifting.

When I had given up hope of ever being well again, a friend recommended "Fruit-a-tives" to me and *after using the first box I felt so much better* that I continued to take them, and now I am enjoying the best of health, thanks to your remedy".

W. M. LAMPSON.

If you—who are reading this—have any Kidney or Bladder Trouble, or suffer with Rheumatism or Pain In The Back or Stomach Trouble—give "Fruit-a-tives" a fair trial. This wonderful fruit medicine will do you a world of good, as it cures when everything else fails.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

RENEW your subscription to THE ADVOCATE and your daily papers now.

Farmers Like
The Toronto Daily Star

They like it, because it is a real up-to-the-minute newspaper.

And they like it even more, because it helps them to make money, by giving them the market quotations while prices are still "hot."

You get the live stock, grain, and produce market reports from Toronto, Montreal, Buffalo, Chicago, and Winnipeg from twelve hours to one full day ahead of your receiving the same quotations in the next morning's papers.

And you know how often you have said to yourself, "If I had known earlier just how the market was going, I could have made money."

In addition to its splendid market service, the Toronto "Daily Star" gives you the most comprehensive war and general news service obtainable through any daily paper in Canada.

Then, too, there are pages to interest the women and the children, and a good comic cartoon series.

In fact the Toronto "Daily Star" is just such a newspaper as a farmer who is interested in the world news likes to read, and he eventually comes to regard it as the inseparable companion of his leisure hours.

Subscribe for it To-day

We guarantee that you will thoroughly enjoy it. Send your subscription direct to this office, or through the publisher of your local newspaper.

The Price Direct is $3.00 a year in advance, or together with THE ADVOCATE, $4.50.

Meeting at Aberdour

A meeting in the interests of John McAsley, the Independent Liberal win-the-war candidate will be held at the Aberdour School house on Saturday evening, Dec 15th, at 8 p m.

Ladies' Meeting

The ladies of Paisley, especially voters and soldiers' relatives are invited to meet in the town hall on Thursday at 4 o'clock to hear a short address from Mrs Heslop of Toronto, who is to speak at the Union meeting in the evening.

Election Returns, Dec. 17th

The Women's Patriotic League has made arrangements to provide exclusive election returns at the Town Hall on election night. No returns given out anywhere else in town. Admission 15c, children 5c. Serious receipts for Red Cross. Everybody come to the hall election night.

Christmas Fair

The fourth annual Xmas Fair of Walkerton Xmas Fair Association will be held at the town hall on Thursday, Dec 20th, $250 in prizes will be offered for live stock, dressed meats, live and dressed poultry, grain and roots. $100 in prizes for horses. Prize lists mailed on application to secretary. John O'Neil, Sec'y, Walkerton.

Unionist Meeting

A public meeting in the interests of Mr A E McNab, Union Government candidate for South Bruce, will be held in the Town Hall, Paisley, on Thursday evening, Dec 13th. Addresses will be given by Mr Benjamin A Gossage of Toronto, Rev C W Connor of Walkerton, Lieut Elliot, a returned soldier, and Mr McNab, the candidate. Ladies specially invited.

—Mrs C K Boyd and babe have arrived home from Tilbury.

—Mrs J Hyde was up from Toronto for a few days last week.

—Miss Agnes Pearce was home from Owen Sound over Sunday.

—Mr and Mrs Pitchie, of Mount Forest spent a few days at Mr A Fraser's.

—Miss Beth Allen, of London, is at the home of her uncle, Mr J B Laidlaw.

—Mrs Jas Eagles, who has been in frail health for years, has gone to the Walkerton hospital for the winter.

—Mrs D MacDonald, the Seymour restaurant on Inkerman St from Mr Geo. Welsford, and have moved in from the homestead.

—Mrs H B Putnam, Treasurer of Bruce County W. C. T. U., has received a donation of $10 from the Sergeant Patriotic League of Southampton for the Y M C A fund toward soldiers' free lunch in France and Belgium.

—Don't forget the Red Cross box social at Lockerby, Dec 14th. Good program is being prepared, consisting of drills, dialogues, solos, male quartette, and selections from Paisley orchestra, etc. Admission 25c, ladies bringing boxes free.

—Mr John T Klenck, electrician formerly with the Paisley Electric Light Co, has returned to town, and is again employed with the local illuminating concern. He has had an extended experience on town and city plants, on both inside and outside work, so is just the man needed on the job here. Since leaving town some years ago he has improved his status as a citizen by becoming a benedict, so his return to our midst will be doubly welcomed. He has rented a home on Queen St north and moved in.

Prize Winners at Ontario Poultry Show

Mr J R Laidlaw was awarded fifth prize for pen of white leghorns at Guelph show last week. Mr W A Archer also got into the prize list with his white Wyandottes.

Paisley Soldier Minus an Arm

Nurse Mary Fletcher, in writing home from England tells of meeting Pte Norman McLeod, who had suffered the loss of part of one of his arms. He was in hospital at the time, but is now probably on his way home, and may have landed in Canada.

Died in Dakota

Word has been received here of the death of Thos Fleming, an early resident of Elderslie, which occurred at Tyner, N Dakota, on Nov 2 nd. The deceased was a brother of Mrs Wm Thomson of Paisley and a brother-in-law of Mr R ht Stoddart of Elderslie. He was 82 years of age.

Soldiers Got Socks

Miss Mamie Foster, of 6th Bruce, has received letters from two soldiers in France—Pte B H Hay Wood formerly of Hamilton, and Bandsman H C Ford, of the Canadian mounted Rifles, formerly of Calgary—acknowledging receipt of socks which were sent by Miss Foster through the Red Cross Society. The soldiers are very grateful for the comfortable foot wear.

Farm Workers Will Be Exempted from Military Service

Mr Justice Duff's first judgment rendered as Central Appeal Judge for Canada on Dec 7th, makes it quite clear that farm workers are entitled to exemption on the grounds that production must be maintained in order to sustain the military power of the Allies. This judgment of the Appeal Judge is binding as law upon an appeal tribunals and local tribunals throughout the whole country. Another judgment by Justice Duff shows the exemption is favored for men with all brothers already at the front or on service.

PAISLEY EXEMPTION TRIBUNAL

A few applications are yet to be considered. The following have been disposed of since our last issue.

DISALLOWED—Lawrence Schuster, Wm J O'Meara, Hugo G Winter, Geo S Hovey, Jas S Turple, Frank Hehn, Alfred Watson (dismissed by consent), John Foubert.

P. B. MORE, Druggist

THE REMARKABLE IN WAR FLYING

BY "CONTACT."

"First-class air-fighters" are both born and made. Our exceptionally good system of training brings out the part that is made; the part that is born is a queer quality which undoubtedly contains some sort of essence of genius—there can be no other explanation.

An instance of the above was the late Captain Albert Ball, V.C., D.S.O., M.C., to my mind the greatest air fighter yet produced by the war, a twenty-year-old boy whose death was a bigger loss of offensive potentiality than the sinking of a Dreadnought. He did not shine when learning to fly—indeed, after he had crashed one or two machines there was actually question whether he would be allowed to continue his instruction in aviation. In France he flew the old stable two-seaters for a few weeks, and then worried the authorities into transferring him to a squadron of Nieuport scouts—at that time the best Allied single-seater 'bus. Within three weeks of the transfer he had started his dazzling exploits. His special study was to approach unobserved, making good use of the sun, and then to attack from a "blind spot." His favorite method was to manoeuvre underneath an opponent at very close quarters and fire upward from the machine-gun fitted between his top planes. Many others in the old crack squadron of Nieuports tried this plan, but none approached Ball's uncanny success with it. Soon he took to flying alone, so as to make concealment easier; and nearly always he managed to add at least one Hun to his trophies, on each solo flight beyond the lines. A single machine, a party of two, three or four, or a large formation—it was all the same to him—he attacked invariably, and shot

A remarkable photograph of an aeroplane flying over the trenches on a photographic reconnaissance. The machine shown is about 5000 feet up, the photograph having been taken by the protecting scout flying several thousand feet higher.

a machine down almost invariably. So he went on, until, with a bag of between thirty and forty machines, he returned to England late in the autumn of 1916, when the aeroplane "shooting season" was over in France. For a few months he remained at home lecturing on air-fighting and engaged on experimental work.

Another intensive "shooting season" opened early in the spring of 1917, and Ball flew across the Channel, went straight over the lines, shot down two Boche aeroplanes, proceeded to the British aircraft depot and reported his return to France. Then commenced a series of epic flights, either alone or with a companion 'bus.

So he went on, until his total of Hun machines destroyed had passed fifty. At the last a burst of bullets ended the life of this very gallant and very brilliant boy.

I have mentioned the methods of attack in which Ball specialized. There have been many others used by first-class fighters. One such was introduced by Second-Lieutenant Rhep-S.O., M.C., an Australian, who brought down about fourteen aeroplanes and three kite balloons in little over two months, before the sinister word "missing" was attached to his name. His pet usage was to pull up the nose of his Nieuport almost to stalling point with engine full on, and then, by holding the rudder on one side, to make the machine swing round and round while pointing upwards and to fire at each Boche machine as it came within view of his gun-sight. A crack French pilot invented an extraordinary tail-down spin which only he was apparently able to use with success in a fight. The Germans Boelcke and Immelman used decoy machines some 2,000 feet below them. While an Allied 'bus was attacking they swooped down, fired a long burst at close range, and continued the dive. If they did not bring down the machine in question by this means they soldom returned to the attack, the decoy also diving down to safety.

Many of the champions, however, make use of every possible method of attack, according to circumstances. Of course such was Guynemer, who once, when left with no ammunition, bullied a German machine into landing on French country merely by manoeuvring superbly around it and pointing his own 'bus as if he were firing. Baron von Richthofen is likewise, apparently, master of all air tactics. Then there are occasions whose successes are due almost entirely to courage. These rush by the most direct route at enemy craft and take no heed of their own danger. In this connection a curious case happened at the front this summer. A certain British scout-pilot had shown himself to be of the good average sort. But one of his pals in the squadron was killed, and for the fortnight following he seemed half-mad with rage and flew amok. During this wild period he went hell-for-leather at each and every black-crossed plane he could find. Within fourteen days he had shot down about twelve machines and won the D.S.O. and the M.C. Then he reverted once more to a good average scout pilot.

A certain well known pilot found it necessary to come down behind the German lines just after midnight. He made a good landing in a large field, but his engine had gone on strike and refused to be started. An examination by the faint light of a quarter-moon showed him that the trouble was caused by the oiling up of two plugs. Thereupon he took out the offending plugs and cleaned them—a job which took him three-quarters of an hour. While working he sat on the hot cowling, which burned through his breeches and scorched his skin. A few French peasants watched him from the far side of a hedge, but, fortunately, no German soldiers passed that way. One can imagine the scene: Midnight, a British aeroplane in a field twenty miles behind the German trenches, the half-light of a tiny moon, a man sitting over the engine working feverishly, a group of wondering peasants peering through a shadowy hedge. The plugs cleaned, the pilot left the throttle nearly closed, got out and swung the propeller, climbed back into the machine when the engine began to roar, soared up into the darkness and flew home.

Another very plucky show was that of a man whose single-seater machine had been badly battered by fragments of an anti-aircraft shell. The wings and fuselage were weirdly ventilated, the pilot himself was wounded in the head and leg, and an opening the size of a duck's egg was ripped into the petrol tank facing him. The petrol pressure went, and with it the engine power, so that there seemed nothing for it but to land in Hun territory. Though the pilot was weakening from loss of blood it occurred to him that if he stuck his knee over the hole it might be able to pump up pressure. He tried this and the engine came back to life again some 50ft. above the ground. At this height and in a half-fainting condition, he flew twelve miles with his 'bus scarcely touched by the scores of machine-guns trained on it.—English Country Life.

BEACH CURIOS.

Puzzling Objects Which May Be Picked Up On the Seashore.

There is no place like the seashore for picking up puzzling curiosities.

For example, here is a mermaid's purse. Looks like it, certainly. One might think it was made of india rubber. Of course, a mermaid is not built for wearing stockings, and so she is obliged to carry a pocketbook.

What is it, really? Well, the truth is that it is a shark's egg—at all events, the shell of one.

And here is another curio. It has the form of a cross. One might suppose that it was an object of artificial manufacture. But it isn't. It is part of the bony system of a monkfish—the name of the latter being derived from this strange item of its structure.

But what on earth is this snakelike thing? In form it suggests the skeleton of a snake; but it is surely nothing of the kind, being composed of a series of hundreds of capsules.

You'd never guess the fact. It is a bunch of eggs laid by one of these big univalve molluska—huge sea snails—that we call "conchs." Or, more accurately speaking, each capsule contains eggs or newly hatched young.

Fisherman, by the way, sometimes fashion the shell of a conch into a trumpet, through which a blast of great loudness may be blown.

CANADA'S AIRPLANE SPRUCE

Government Has Prohibited Export Outside the Empire.

The survey of the forest resources of British Columbia, upon which the Commission of Conservation has been engaged for the past four years, has proved of striking immediate value in the prosecution of the war. The Imperial Munitions Board, which has definitely taken in hand the organization of airplane manufacture, found itself in immediate need of large quantities of airplane spruce, and the Commission was able, as a result of its survey, to furnish the Board with specific information as to the location and ownership of all the large bodies of spruce in British Columbia suitable for that purpose. The fact that this information had previously been collected enabled the Munitions Board to take up without delay the matter of securing the necessary supplies of this

Steps are "all material the production of airplane spruce beyond all limits previously thought possible.

This is but another example of the vital importance of Canada's natural resources in winning the war. Many experts hold that the best prospect for definitely and overwhelmingly maintaining the supremacy of the allies is in connection with the war in the air. This involves the manufacture of many thousands of airplanes, toward which the most intense efforts of the allies are being directed. The most suitable species of wood for this purpose in Sitka or silver spruce, or which great quantities are to be found on the Pacific coast of North America. Canada's share of this timber is very large, and is considered so important in the prosecution of the war that its export except under license, has recently been prohibited by the Government to all destinations other than the United Kingdom, British possessions and protectorates.

NO QUIET ON BRITISH FRONT.

Says a Recent Visitor to the Western War Zone.

"There is no quiet sector on the British front. Where the British are, the Germans have no peace," writes Mr. J. A. Spender in the London Westminster Gazette of his visit to the Front. "Every active British officer makes it a matter of personal pride that the lines opposite to him shall not be a rest-camp for the enemy. To have done and to get home, and, in the meantime, to use all possible energy to that end, is the universal desire. I believe this is the right spirit, and the only possible way of ending this war.

"Sometimes, on looking at this scene, the thought comes over you that it might go on for eternity. I have sat for an hour on one of the Ridges looking over a wide space of country, discerning dimly the line of British trenches, then the interval of No Man's Land, and beyond it the line of German trenches, and for the whole hour seen not a single human figure on the landscape, though there were, perhaps, 100,000 men somewhere in that country. If that were all, they might sit there for ever and evolve a troglodytic mode of life to suit the conditions.

"But come after dusk to this or any other point of vantage, and you will see it alive against the darkness, guns flashing, star-shells ascending, green lights, white lights, red lights talking vividly from sector to sector, and regealing by night the activities that have gone on by day. I know nothing quite so eerie as the view over the apparent solitude of the trench-lines in a 'quiet sector' by daylight."

MOTORCARS AND TYPHOID.

Reduction in Cases of Fever Follows Use of Automobile.

It would scarcely be possible to imagine two things further apart or with less apparent connection than typhoid fever and the automobile. And yet the latter is one of typhoid's worst enemies.

This remark applies particularly to our cities, where the death rate from typhoid has been notably reduced by the automobile.

The reason why is simply that in cities the motorcar has almost entirely replaced the horse; and it is in horse-droppings, accumulated in stables and manure piles, that more than 99 per cent. of all the house flies are bred.

It is open to anybody's observation that nowadays there are few flies in our cities, as compared with a dozen years ago. In residence districts they are so scarce that some people have given up the use of window screens.

One stable will furnish a whole neighborhood with flies; but experimental inquiry has proved that the insects do not ordinarily travel more than a few hundred yards from the place where they were hatched.

In the "better" residence quarters there are few horses kept. Stables have been replaced by garages. As a result, the flies have departed.

The house fly is a notorious carrier of typhoid. It is a frequenter of filth and carries germs of all sorts of intestinal diseases to the family kitchen and table. No wonder, then, that its relative elimination in cities has resulted in a great diminution of the number of deaths (especially among infants) from such maladies.

Score one for the automobile!

FROM BEERSHEBA TO DAN

SWEEP MODERN CRUSADERS IN THE PRESENT WAR.

Turkish Crescent Pales Before the Union Jack as Army Surges Toward Jerusalem.

Under the waddling British tanks and the great feet of the army camels the dust of 5,000 years of history is being stirred in Palestine. From "the hill that looketh toward Hebron" in Gaza the English artillery is rousing echoes. They ring from Beersheba to Dan, from Berlin to Constantinople. And as the sacred, immemorial dust of that land quivers to the boom of modern guns, fate turns another leaf in the Holy Land doombook. It is Jack, and with the British Union

For the British are through Palestine, gathering a thousand Turkish prisoners here, a hundred Turkish howitzers there. They are carrying out the old crusaders' dream of conquest with a thoroughness that has made the Ottoman crescent a thin and sickly glimmer of its former self. A few more brilliant coups like that by which General Allenby dashed from the Egyptian border to the latitude of Bethlehem and the Turkish crescent will go into sudden and complete eclipse for the duration of the war.

Jerusalem a Storm Centre.

For ages Jerusalem has been as a glittering gem over which nations wrangled. Never was the Holy City a more vital possession than at this moment, not a possession for which contending armies fought more fiercely. The British drive across Palestine is as important as the German drive across Italy. Every step which the British take northward is a step that brings nearer the end of the war. Jerusalem, where the Man of Galilee called the peacemaker "blessed," may yet be the source from which the blessing of peace shines on the world.

Beersheba, Gaza, Hebron, Ascalon—the very names are heavy with the jewels of romance and sweet with the breath of incense. They were names known in the streets of Babylon and Nineveh. Thebes and Luxor learned them from the lips of Hebrew slaves. These towns were old when Troy was young. The oppressor of many a race and kingdom plundered them, and always they waited for the ultimate deliverer. It seems strange that the name of that deliverer should be no musical half dozen syllables of Hebrew or of Greek, but the short and sturdy Anglo-Saxon "Allenby."

March of Allenby's Men.

They entered Palestine by way of the sea, by way of the desert and by way of Beersheba, these men in Allenby's army. Egypt, from which countless raids on the northern land had been made in bygone centuries, saw part of the preparation. So did the Sinai peninsula, in whose grim and desolate waste along the Red Sea towers that Mount Sinai where Moses heard the thunders of the law. Under the enormous low-hung stars one detachment set off by way of the coast line, not far from the lazy murmur of the Mediterranean. The other detachment, by a wide detour, rode silently at night over the desert sand and fell upon Beersheba from the eastern side. It was the Australian corps who rode out of the desert in a whirl of golden dust, mounted on camels, like conquerors of olden time. But before them, in place of the strange-winged deities that Assyrian war lords put upon their banners, there went a skimming flock of airplanes.

Beersheba fell. Gaza's walls, so many times stoutly defended, are gone. Allenby's men, however, could still trace in the scattered rubbish of the ruins those long inclosures and the seven gates.

Ancient Hebron.

A little bit north of Gaza, and in direct line with Jerusalem, lies Hebron. It is a hill of shining white houses banked about a noble mosque, all set between hills rich with olive, fig and pomegranate trees. In the mosque is the reputed tomb of Abraham, Isaac and Jacob, to which the 20,000 Mussulmans and the 2,000 foreigners alike do reverence.

There are a dozen wells and a score of springs in Hebron. Sara's well is there, and the wells of Abraham and Jacob, and the pools of Solomon. They have been tinged with blood numberless times since David hung the traitors' hands and feet for a warning to his kingdom.

Ascalon knows bloodshed, too, there by the Mediterranean shore. In these last few days the village again has heard the fury of war about its ruins. Not far from the latitude of Bethlehem—a spot with which the idea of peace on earth is inextricably associated—Ascalon nevertheless has plunged so deep in wars that for seven centuries it has been a rubbish heap.

When the British troops turned machine guns on the cliffs and captured the luxuriant ruins of temple and garden there should have been in the forefront of the invaders a tall, wide-shouldered man in black armor with a tossing black plume in his helmet and a battle-ax in his hand. He could have shown his Englishmen the way into Ascalon, for Richard the Lion-hearted wrested that sea-bright town from Saladin seven centuries ago.

Famous Ascalon.

Before the victory was accomplished, however, Saladin laid the town waste with an almost Teutonic savagery. Richard of the Lion Heart gazed at the desolation and set his soldiers to rebuilding. Under the hot sun and the hot sea glare the town began to blossom again. But a three years' truce with the Saracens left the work uncompleted. And then came Bibars—and obliteration.

For cypress trees and vineyards Ascalon was famed in the days when Richard of the Lion Heart hammered at the gates. The wild vines and the unkempt cypress still grow, thick and undaunted, among the fragments. And among those fragments, with the vines and cypress as mute reminders before their eyes, stride the latter-day Lion Hearts, the old lion's whelps.

They are bound on a bigger crusade than Richard ever dreamed, but their spirit is no less great than his. They have pledged themselves to make their crusade a victorious one in that land between the desert and the sea, where the dust of five thousand years is stirring.

Shattered Shop at Arras Furnishes Many Souvenirs.

The merchant in the town that is beset by war has a very definite last moment of peace. There comes a time when he has made his last sale, when his customers flee, and when, even were he to remain, he would find little benefit in doing so. Into the toyshop, into the sweets shop, the children will come no more, for their little feet are struggling miles away over uncomfortably rounded cobblestones. He might as well get his last moment over with as quickly as possible, put up the shutters, lock the doors and depart, says Mr. William G. Shepherd in Harper's Magazine. And little good his shutters and locks will do if the big shells come his way.

The toyshop keeper at Arras, who returned to his shop when the shelling had slackened, found it open to the skies; he had no need to seek for his door key. Who would ever have thought that he would one day sell out almost his entire stock in spite of the ruinous shelling? And yet his toyshop, after he returned, became the vogue among British officers who came to Arras. It was their kindly joke, and it pleased their sense of gentle humor, to go to the ruins where the old man held forth and purchase toys that he selected from among the debris.

"Can you find me a doll?" the visitor would ask.

Stumbling over the wreckage to that corner of the shop where he had kept his dolls, the old toy seller would seek among the broken bricks and timbers, the article that his customer desired. He would always look for the price mark, and would never charge more than it indicated.

"Most of my things are broken," he would say, "but these Englishmen buy them anyhow—as souvenirs, you see."

In more than one place along the British lines there are billets in which the most highly prized souvenir is not "that piece of shell that almost hit the captain," or "that shrapnel ball that fell on our table during dinner," but a broken toy from the ruins of the shattered little toyshop at Arras.

MODERN JOANS OF ARC.

Inspiring Deeds of Women in the Three Years of Conflict.

In December last a thrilling scene occurred beside a humble cot in the field hospital at Saloniki. Lying there, her countenance lit by a pleasant smile, was a small middle-aged Scotch woman, Flora Sandes. She was convalescing from wounds that had torn her entire right side, from shoulder to knee. Bending over the little lady, a royal aide-de-camp to the Prince Regent of Serbia pinned on her breast the gold and silver cross of Karageorge—a rare decoration given only for conspicuous bravery on the field of battle. Around the sick bed were grouped officers and men of the occupant's regiment, in whose regard she stood high, rejoicing with her upon the investiture of so signal a mark of honor. For Miss Sandes, though originally a hospital nurse in the Balkan kingdom, had been given permission to join its army. Not long afterward she found herself a sergeant, and it was while leading her men in an assault on the previous September, during the campaign on the Macedonian front, that an exploding grenade made such terrible havoc of her body.

Of the same noble army as this daughter of Scotland is the young Rumanian girl who turned probable massacre into victory for one of her country's regiments, in the October of last year. Leaving on a Hungarian ambuscade, she hastened to the leader of the approaching troops and informed him of their danger. The valiant maid did more. Placing herself at the head of the column she led it safely, by a circuitous route, to the rear of the enemy. As might be expected, the result was a complete surprise and easy conquest.

Stories such as these have been told and retold in steadily increasing number during the last three years. They have been here recalled once more, less for the intrinsic interest in their red-blooded details than to point the truth already stated; such splendidly inspiring deeds of womanhood are so far from unusual that they are positively to be counted upon whenever patriotism wakens and the pressing need for heroism comes.

FIGHT OR PERISH.

The Only Alternative, Says the Wall Street Journal.

What is Germany fighting for? Her emperor has told us in his proclamation to the army early in 1915, in which he said:

"The triumph of the Greater Germany, which some day must dominate all Europe, is the single end for which we are fighting."

The single end!

Since the war began evidence has accumulated to convince the most unwilling that this war is the result of long and carefully worked out plans to accomplish a definite purpose. This war, with the domination of Europe is but a part of the larger and more ambitious plan.

At the Potsdam conference in July, 1914, held for the purpose of ringing up the curtain on the first act of the great world drama, the Kaiser said:

"From childhood I have been under the influence of five men, Alexander, Julius Cæsar, Theodoric II, Frederick the Great and Napoleon. Each dreamed a dream of world empire: they failed. I am the emperor—dream of German world empire."

"What Rome was, Prussia aspires to be." Was it prophecy, or did that keen historian read the future in Prussia's past?

At this conference the emperor showed a map of the old Roman Empire, with all the principal countries as its vassals. That was what Rome was. What does Prussia aspire to be?

He exhibited another map showing the world when his dream came true. "France, England, Ireland, Russia—in fact, all Europe, was shown as Germany. Across the water was the United States with "Germany" as its name. "We will have our heel on the head of every nation on earth," said he, "and the United States and Canada in three years."

This is why it is our war, and why we send soldiers to France to fight before it is too late. We must fight now or perish.

UTENSILS FOR CRIPPLED MEN.

New Rimmed Plate Designed For One-Armed Soldiers.

Dishes designed to keep the food of the one-armed veteran within bounds until he masters the finesse of single handed feeding are now being manufactured in England. Dr. Edward A. Bott, director of functional re-education at Hart House, has brought samples from England for the consideration of the authorities of the Orthopaedic Hospital in North Toronto, where the crippled Canadian soldiers returned from overseas as convalescents are being treated under the direction of the Military Hospitals Commission.

Orthopaedic dishes as they are technically designated have become a necessity widely demanded in England and France where many men early in the war lost an arm. Some were designed by men themselves who were ingenious, others by professional potters.

Dr. Bett brought back a soup plate and a plate designed for general service. The soup plate differs from the ordinary soup dish in having a second declivity into which the last two or three spoonfuls run and may be secured without tipping the plate—a breach of good manners common enough among busy, hungry men to war serious consideration.

The plate for general service in turn resembles a very shallow soup plate, the centre being sunk slightly so as to prevent the food from slipping over the edge as the fork pursues it.

A combination knife and fork which has also been devised, works with great success, and one armed men are able to prepare their own food for eating without difficulty.

Finishing Lambs for the Block.

No matter what the final settlement of the war may be, the demand for live stock and the productions thereof is bound to exceed the supply for many years thereafter. Although it is possible exact statistics may not be forthcoming from all the belligerent countries, sufficient is known to show that there has been a shrinkage in the last three years of many millions of head of sheep, swine and cattle. In addition, the consumption of the production of live stock has been enormous and will so continue. After the war there will be a setting of the house in order by each nation that will take a long period to accomplish. For this reason it is incumbent upon live stock breeders and farmers generally to exert all their powers towards every line of live stock production. A number of pamphlets, circulars or leaflets, issued by the Dominion Department of Agriculture, contain instruction and counsel that can not fail to be of intense usefulness to stock breeders. One of these publications just issued, and that has for its author Mr. E. S. Archibald, Dominion Animal Husbandman, tells of the profits to be derived from sheep breeding and raising. It makes a special point of the winter feeding of lambs and gives the average profits for a period of seven years that have been shown to be possible by tests made at the Experimental Farms in different parts of the country. The cost of equipment is also dealt with in a brief synopsis. The pamphlet can be had free on application to the Publications Branch, Department of Agriculture, Ottawa.

"One Meatless Meal a Day" is a good food slogan for war time, or any time—better make it two meatless meals a day—it would mean health and strength for the nation. But be sure and get the right substitute for meat in a digestible form. **Shredded Wheat Biscuit** is the ideal substitute for meat. It is 100 per cent. whole wheat prepared in a digestible form. Two or three of these little loaves of baked whole wheat make a nourishing, satisfying meal at a cost of only a few cents. Delicious with milk or cream or fruits of any kind.

Made in Canada.

Fashions of the Week

There are bloomers to wear with this smart little dress. The skirt buttons under the tuck. McCall Pattern No. 8050, Child's Dress with Bloomers. In 5 sizes, 2 to 10 years. Price, 15 cents.

This frock of tan broadcloth has a white broadcloth collar of unusual shape. McCall Pattern No. 8063, Ladies' Dress. Pattern in 5 sizes; 34 to 42 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer or from the McCall Co., 70 Bond Street, Toronto. Dept. W.

Instant Postum

fits the spirit of the times perfectly. It is

Healthful

Economical
(without loss of pleasure)

Convenient
(ready for instant use)

and is a pleasing, wholesome, drug-free drink good for both young and old.

GERMANY'S ARSENAL.

Essen is the Site of the Gigantic Krupp Munition Factories.

The word "Krupp" in Germany almost stands for guns and war material of all kinds. Essen is the home of this vast concern, and exists for it, as it was made by it.

Before the war Krupp's had 3,500 steam-engines, 1,500 furnaces, 500 gigantic steam-cranes, capable of lifting the biggest guns like the toys of a child, and 200 steam-hammers. To anyone who knows the inside working of a munition factory these few details will present a picture of the stupendous output of munitions of war which the Allies have had to overtake, and upon which the Hun rested his belief that he could dominate the world.

The works, furthermore, [illegible] miles of telephone wires.

Linked up with the works, in all parts of Germany, are hundreds of mines, chiefly coal and iron, besides innumerable quarries. A fleet of steamers, too, plied for the supply of material.

A woman is the virtual head of this vast concern—Frau Bertha Krupp von Bohlen und-Halbach, and the Kaiser himself has shares in the concern.

THANKFUL MOTHERS

Mrs. [illegible] extremely thankful that I tried Baby's Own Tablets for my baby. Through their use baby thrived wonderfully and I feel as if I cannot recommend them too highly." Baby's Own Tablets break up colds and simple fevers; cure constipation, colic and indigestion and make teething easy. In fact they cure all the minor ills of little ones. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

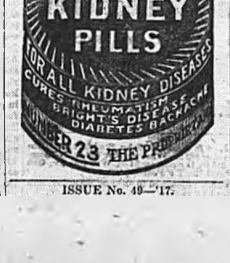
RED CROSS SPIRIT SPEAKS.

"I kneel behind the soldier's trench,
I walk 'mid shambles' smear and stench,
The dead I mourn;
I bear the stretcher and I bend
O'er Frits and Pierre and Jack to mend
What shells have torn.

"I go wherever men may dare,
I go wherever woman's care
And love can live;
Wherever strength and skill can bring
Succase to human suffering,
Or solace give.

"I am your pennies and your pounds,
I am your bodies on their rounds
Of pain afar;
I am you, doing what you would
If you were only where you could—
Your avatar.

"The cross which on my arm I wear,
The flag which o'er my breast I bear,
Is but the sign
Of what you'd sacrifice for him
Who suffers on the hellish rim
Of war's red line."



—John H. Finley.

AN EXCELLENT SERVICE

For the last two years the Canadian Pacific Railway, in connection with the Pacific steamers of the Canadian Pacific Ocean Services, has carried a very large proportion of the passengers from the United States to Russia, and as these passengers have included a great many American railroad men, who have been surprised at the excellence of the service, a remarkable volume of trade is developing, greatly to the benefit of Canada itself. Among these passengers was the American Railway Advisory Commission, consisting of the leading railway experts of the United States, who travelled from Chicago to Vancouver, and thence to Yokohama via the Empress of Asia. Mr. Henry Miller, vice-chairman of this highly important commission, has written Vice-President C. M. Hosworth a letter of deep appreciation, in which, after referring to many individual courtesies along the route, he remarks: "You have good reason to be proud of your organization and service, and we take this method of thanking you heartily for your kindness and courtesy."

Minard's Liniment Cures Colds, &c.

There is no special provision made in Ontario to supply nursery stock of forest trees or shrubs for the reforestation of school grounds, says J. B. Dandeno, Ph.D., inspector of elementary agricultural classes. Where school boards are desirous of obtaining such material, they are expected to secure it either from near-by woods or swamps, or from regular nurseries. Where the schools are maintaining classes in agriculture, a portion of the grants apportioned to the board for equipment may be used to purchase trees, shrubs, or perennials. In schools where agriculture is not taught (the subject is optional) according to the prescribed regulations of the Department of Education, no financial assistance is received for this purpose.

INVENTOR OF BEST PAPER BAG.

Little Massachusetts Girl Made Machine To Turn Out Bags.

Nearly fifty years ago a letter was received by the United States Board of Patents at Washington asking for a patent on a machine for making paper bags. The letter was signed by a girl.

"Who is this?" questioned the men in Washington. "The machine cannot be worth much. Who ever heard of a girl inventing a machine that was any good?" But when the machine arrived it was a surprise. Not only was it nearly perfect in every detail, but the paper bags that it turned out were better than any that these men had seen before. And the girl was awarded the patent desired.

This girl was Margaret Knight, born and bred in Massachusetts. When she was still a little girl her dolls would be scattered over the floor while she ran out of doors to play with her brothers. She could run, play ball and romp as well as the rest of them. A jackknife gimlet was her favorite toy, and hour after hour she would sit on the floor, surrounded by pieces of wood that the boys had collected for her, making playthings for them.

"Let me coast with you," begged Margaret one bright snowy morning.

"There isn't room for girls on this sled," replied her brother, trying to tease her.

"All right. You wait," and she ran home. All that day Margaret worked in the woodshed. When asked what she was doing, she would reply, "Just wait and see."

And they saw. For next morning from the woodshed came Margaret dragging a sled with better runners than the boys' sled possessed. Her brothers stared at her.

As she grew older she tried making more difficult things, first of wood, then of heavier material, until she completed her paper-bag machine.

"DECLINED WITH AGONY."

How a Chinese Editor Rejects a Would-Be Contributor's Offering.

Canadian editors do not as a rule waste words in rejecting a would-be contributor's masterpieces. But in China, if report speaks true, it is even more delightful to have a rejection than to receive an acceptance. If the story, article, or poem is accepted, little or nothing is said; but if the MS. is rejected, all doubts on the head are dispersed, for the editor will write a letter with the rejected screed something like this:

"We have read thy manuscript with infinite delight. By the sacred ashes of our ancestors, we swear that never before have we revelled in so enthralling a masterpiece. If we printed it we should henceforth be obliged to take it as a standard of quality and achievement, and henceforth never print anything inferior to it. As it would be impossible to find its equal in ten thousand years, and we have to go to press with our poor, uninspired paper once a day, we are compelled, though shaken with sorrow and blinded with tears at the necessity, to return thy divine manuscript, and for doing so we ask thee a thousand pardons."

WANTED Box Sawyers and Box Makers
GOOD WAGES AND BONUS
FIRSTBROOK BROS., LTD.
283 King Street East, Toronto

Brown Milk Gravy.—2 cups skim milk, 4 level tablespoons flour, level tablespoons butter, oleo or sweet dripping. Melt the fat, add the flour and allow to brown, but not burn. Season with black pepper and salt. Add the milk and cook until smooth. (If you make this once correctly, you will make it often.)

No Eye For Color.

Apropos of the amusing comments on academic costume, that so often reveal popular ignorance of the symbolism of hoods and gowns, is the following story, told by a contributor to the Liverpool Post:

A friend of mine, says he, is a curate in a local suburban parish. Some little time back he went up to Oxford to take his Master of Arts degree, and the following Sunday appeared in the pulpit resplendent in his new Master of Arts hood. A few nights later he was dining in the house of a prominent parishioner, and was amazed to hear his hostess pleasantly remark:

"Mr. X., that new hood of yours doesn't suit you at all. I can't imagine why you, with your complexion, chose red of all colors in the world. A myrtle green or an old gold would have suited you much better, and would have been far more effective. You men never know how to dress yourselves!"

I was cured of terrible lumbago by MINARD'S LINIMENT.
REV. WM. BROWN.

I was cured of a bad case of earache by MINARD'S LINIMENT.

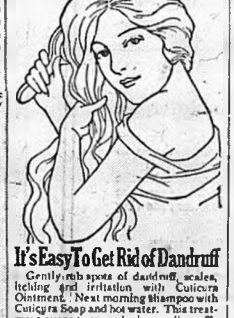
Forty per cent. of all foreigners in London live in Stepney, in the East End.

Minard's Liniment Cures Garget in Cows.

Save feed by providing warm quarters for stock, but don't neglect ventilation.

YES! MAGICALLY! CORNS LIFT OUT WITH FINGERS



You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that Freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

It's Easy To Get Rid of Dandruff

Gently rub spots of dandruff, scales, itching and irritation with Cuticura Ointment. Next morning shampoo with Cuticura Soap and hot water. This treatment every two weeks is usually sufficient to keep the scalp clean and healthy.

Sample Each Free by Mail. Address post-card: Cuticura, Dept. N, Boston, U. S. A. Sold throughout the world.

How to Meet Trouble.

Rise above small things. The woman who lets small things worry her will be completely undone the first time she meets with a really big problem. It is disintegrating to your mental and nervous condition, not to mention your physical condition, to worry. You need not be resigned to take nor slip your troubles off on the old friend duck's back throws water. But you can meet troubles with a will to conquer them or adjust them—and, after that, "they should worry," but not you.

MONEY ORDERS

Dominion Express Foreign Cheques are accepted by Field Cashiers and Paymasters in France for their full face value. There is no better way to send money to the boys in the trenches.

Apple and Sago Pudding.

Wash a cupful of sago and soak for several hours. Slice apples, put into a well buttered pudding dish, sprinkle with sugar, pour over the sago and return to the oven. Cook until the apples are tender. Serve with milk and sugar.

Minard's Liniment Cures Diphtheria.

Auntie's Mistake.

The spelling lesson contained the word "wool," and little Clarence did not know what it meant.

"What is wool, auntie?" he asked.

"Wool," replied auntie, "is fine hair that is taken from the back of a lamb. It is used in making yarn, cloth and other things. The trousers you have on are made of wool."

"Oh, no, auntie, there are not made of wool. They are made from an old pair of papa's."

A Cure for Pimples

"You don't need mercury, potash or any other strong mineral to cure pimples caused by poor blood. Take Extract of Roots—druggist calls it "Mother Seigel's Curative Syrup"—and your skin will clear up as fresh as a baby's. It will sweeten your stomach and regulate your bowels." Get the genuine. 50c. and $1.00 Bottles. At drug stores.

TORONTO, ONT.

If short of roots and cabbage gather up the clover leaves at the edge of the mow and save them for the hens. They can be fed dry or scalded and fed in mash. They take the place of green feed.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

THE
Hospital for Sick Children
College St., Toronto

ITS CHRISTMAS MESSAGE

Dear Mr. Editor:—

Thanks for your kindness in allowing me the privilege of appealing to your readers this Christmas time on behalf of the Hospital for Sick Children, the "Sweetest of all Charities," which has as its mission the care of the helpless, the sick, the crippled and the deformed.

There never was a year in the history of the Hospital when funds to carry on the work were more needed than now.

Your purse is the Hospital's Hope. Your money lights the candles of mercy on the Christmas trees of health that the Hospital plants along the troubled roadway of many a little life.

So I am asking you for aid, for the open purse of the Hospital's friend is the hope of the Hospital at Christmas, just as the open door of the Hospital's mercy is the hope of the little children throughout the year.

Calls on generous hearts are many in these times. Calls on the Hospital are many at all times, and especially when food and fuel and drugs and service costs are soaring high. YOU know the high cost of living. Do you know the high cost of healing—of helping the helpless to happiness? What you do to assist is the best investment you will ever make.

Do you realize what this charity is doing for sick children, not only of Toronto, but for all Ontario, for out of a total of 3,740 in-patients last year 646 came from 254 places outside of Toronto. The field of the Hospital's service covers the entire Province—from the Ottawa to the far-off Kenora—from the borders of the Great Lakes to the farthest northerly district.

The Hospital is doing marvellous work. If you could see the children with crippled limbs, club feet, and other deformities, so many left the Hospital with straightened limbs and perfect correction, your response to our appeal would be instant. In the Orthopedic Departments last year a total of 350 in-patients were treated; and in the Out-Patient Department there were 2,946 attendances.

Let your money and the Hospital's mercy lift the burden of misery that curses the lives, cripples the limbs and saddens the mothers of the suffering little children.

Money mobilizes the powers of help and healing for the Hospital's drive day and night against the trenches where disease and pain and death assail the lives of the little ones.

Remember that every dollar given to the Hospital is a dollar subscribed to the Liberty Loan that opens the prisons of pain and the Bastilles of disease, and sets little children free to breathe the pure air, and to rejoice in the mercy of God's sunlight.

Will you send a dollar, or more if you can, to Douglas Davidson, Secretary-Treasurer, or

J. ROSS ROBERTSON,
Chairman of the Board of Trustees

Machinery For Sale

1 WHEELOCK ENGINE, 18x42.
New Automatic Valve Type. Complete with supply and exhaust piping, flywheel, etc. Will accept $1,200 cash for immediate sale.

1 ELECTRIC GENERATOR, 30 K.W., 110-120 Volts D.C.

The Paisley Advocate

PAISLEY, DEC. 12th, 1917

...man can name or women who did what they could to promote recruiting in the past three years now refuse to do what they can to keep up the re-inforcements for our Canadian soldiers now in the trenches or who will be in the trenches as before spring? A vote for Union Government and conscription is the only way

TRUAX AS A QUICK-CHANGE ARTIST

Mr R E Truax is acquiring a reputation as a political lightning-change artist, and he is living up the record he made in the House of Commons when he first voted for a referendum and then for conscription.

Early in this campaign it was given out on Mr Truax's behalf that he would be accorded the endorsation of the Union government, but that went to his opponent, Mr McNab.

Mr Truax was endorsed by Sir Wilfrid Laurier. This seemingly did not suit Reuben's plan of campaign. He wired to Ottawa stating that he did not wish such endorsation.

Then last week he turned it all over again, and advertised in the Mildmay Gazette, "Vote for R E Truax, the Liberal candidate in South Bruce, who is endorsed by Sir Wilfrid Laurier."

What many would like to know is, just what Mr Truax stands for in this election.

Surely the intelligent electors of the riding will not stand for having it put all over them by a candidate acting in this shifty, undependable manner.

CONSCRIPTION AND DEMOCRACY

There are those who say that universal military service (which can be put into practice only by conscription) is undemocratic—that it is Prussian, Caribean, despotic—everything, in short, to which democracy is opposed.

The very opposite of this is the truth. The basis of democracy is Equality of Rights and Equality of Service. The one is just as essential as the other, and the man who refuses to contribute service equal to the service of others to the community cannot claim equality of rights or privileges with those others.

Voluntarism in military services is no more sensible and no more equitable than voluntarism in the payment of taxes would be. What sort of war would be conducted by a country which passed the hat around for the money with which to finance the war? Everybody knows that such a proceeding could result only in failure.

Will somebody explain why, in a democracy, the fighting ought to be left to those who may choose to fight while the paying is universal and compulsory?—Durham Sentinel.

COUNTY COUNCIL.

The December session of the County Council of the County of Bruce was held at the Council Chambers, Walkerton, opening on Tuesday, 4th inst. Warden Izzard was in the chair and all members present except Messrs Forbes and Moore.

The December Session is the clearing up Session for the year, when all outstanding business is settled but little new business is entered upon. This means a large number of accounts to be audited and paid and the time of the members is fully occupied. The usual number of accounts were presented this year.

The Committee appointed to inspect McGregor's bridge, Eldarslie, so as to be...ing a County bridge, reported they did not consider it came within the provisions of the Act, and did not recommend its adoption. Reeve Case again endeavored to persuade the Council that it should be adopted but the council refused to accept it.

The settlement of matters in connection with the Good Roads scheme occupied much time. A Committee of Messrs Kaiser (Wiarton), Case (Elderslie), and Johnston (Lucknow), was appointed to oversee all accounts in connection with Good Roads and advise the Superintendent, until the January meeting of the Council.

Mr W Hunter, Superintendent of Good Roads, presented a lengthy report on this important matter, outlining the work that had been done so far and what had to be done with the best manner of doing it. Owing to the difficulty of getting men, teams and money, there had not been as much accomplished as he would of liked but a good deal was done and in a manner to meet the approval of the Government Engineer on Good Roads.

Mr Huber, Government Engineer, was present and pointed out the manner of doing the work—the standard required and the best means of obtaining it. He advised strongly against trying to accomplish too much in a hurry, but rather that efficiency should be the guide, even if it took longer to get all into shape. It is not the intention to embark upon a policy of heavy work or expenditure until after the war.

A deputation of ladies waited upon the Council asking assistance towards purchasing raw material for comforts for soldiers made by the different Women's Societies of the County—such as wool for socks, material for pyjamas, etc., etc. It was pointed out that the ladies had carried on this splendid work for the three years of the war without any assistance and they found it difficult to raise enough money to purchase all the material that could be used if they had it. Council decided to make a grant to each such Society of one dollar for each dollar raised by that society and spent for raw material for such work. Full particulars as to this may be obtained by any such society from the county clerk.

Robert Ward, of Wiarton, tendered his resignation as High Constable, which was accepted. The clerk was directed to advertise for applications for the position, to be considered at the January session.

A grant of 50 per cent of the cost of repairing Patenelle bridge in the township of Albemarle, was made to Albemarle in accordance with an agreement by the county some years ago.

Owing to the pressure of business Mr W Hunter resigned as Superintendent of Good Roads. The council regretted losing his services, but the resignation was accepted from 1st Jan, 1918. Mr D Izzard was appointed superintendent from that date.

A message of condolence was sent by council to the mayor of Halifax.

Col. A F Belcher presented the Council with an oil portrait of himself which was thankfully received and will be hung in the Council Chamber.

Council adjourned on Friday.

P A MALCOMSON, County Clerk

A First-Class Performance

"The Heart of Berry," as given by the Southampton Dramatic Club before a full house in Paisley on Friday evening was certainly an excellent performance. Although this is a strictly amateur effort it won greater favor in the opinion of local people than any professional troupe who have appeared here in late years. From curtain to curtain number to the finale it was refreshingly entertaining and brought out bursts of real laughter at frequent points. The actors have both dramatic and musical talent. They brought out the serious and humorous situations at all stages of the play, also rendered be song and dance specialities in artistic style. One of the prettiest special features was the appearance of a bride and groom, enacted by little Betty Ryan of Paisley in full bridal costume, and Freddie Thompson of Southampton in khaki. The cast of characters in "The Heart of Berry" was as follows: Bernice Halstead, a young lady of 18 with an affection of the heart and a love of fun, etc.—Mrs. Kilmer. Amy Halstead, her younger sister, fond of frolic—Mrs Baty. Inez Gray, a young lady visitor willing to share in the fun—Marjorie Rayner. Mrs Halstead, widow and stepmother—Gladys Gorham. Hannah Mary Barnes, or Sis—Mrs A H Davidson. Dwight Bradley, a fortune hunter—A C Douglas. Dr Burton, a young physician—W S Cameron. Sammy, hackey bell boy—Helen McAuley. Abraham Barnes, or Bub, a diamond in the rough—C H Green. Liza Ann, the maid—Mrs P H Lee. The Alphonsey,—Stanley Trauler.

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHIP HARBOUR, N.S.

"It is with great pleasure that I write to tell you of the *wonderful benefit* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

Mrs. MARTHA DEWOLFE.

At all dealers, 25c. a box. 6 for $2.50, trial size, 25c. Postpaid by Fruit-a-tives Limited, Ottawa.

FOR FLETCHER'S
CASTORIA

VILLAGE COUNCIL

Council met on 5th Nov. Members all present except the latter, who was in attendance at County council. Councillor D Pearson acted as Reeve pro tem. Minutes of last and subsequent special meeting were read and adopted.

Mrs. Hallacher waited on Council and expressed the thanks of the late Military Tribunal and of the Military Service Commissioner for the use of the council chamber for meetings of said tribunals.

Communications read: From Toronto Coal and Dock Co, Ltd, offering coal. From the secretary of the Canadian Fire Underwriters Association, stating that it is the intention of their committee to impose an increase at the rate of 15 per cent on all merchantile and manufacturing risks if a night watchman is not maintained. From the Clerk of the Peace, drawing attention to the Fuel Controller's Edicts in Part II re service of heat and bacon at hotels and restaurants. From the Navy League of Canada, appealing for a grant of money for the Navy League purposes. From the Imperial Order Daughters of the Empire, re Navy League appeal. From A H J Simons, claiming $15 for repairs to his auto, alleged damage caused by defective culvert. From National Sanitarium Association, appealing for funds.

Petition from Nelson McMahon and others, requesting a new crossing on north side of Bruce street.

The collector requested instructions re several who had not paid their taxes.

Login—Pearce—That the collector is hereby authorized to take the necessary steps for the collection of taxes from non-residents.—Carried.

Hoskin—Login—That payments be made as follows:—M Leitch $10, Electric Light Co, $66.50; Wrightsmiler $16.65; J R Quickbank $7; M Andrew $9; A A Sinclair $28.65; J H Howse $15.75; Canada Consolidated Rubber Co. $2.20; A Fisher & Son $21.18; W Kennedy & Sons, $ 2.85; Bell Telephone Co. $2.10. Hallachers.

Council adjourned to meet on Saturday, 15th inst, at 2 p m.

SUPPORT UNION GOVERNMENT

Liberals and Conservatives are United
The People Must Unite to

Win the War

A Laurier-Bourassa Victory means deserting our boys in the trenches for over a year, throwing up our hands and quitting! Don't shout "Kamerad" under the Referendum proposal. Come out and fight for Union Government.

Make No Mistake

IF LAURIER WINS:

(1) Canada will send no more reinforcements to the front, which practically means quitting the war and placing the country in the same class as Russia.

(2) The French-Canadians who have shirked their duty in this war will be the dominating force in the Government of the country.

ARE THE ENGLISH-SPEAKING PEOPLE PREPARED TO STAND FOR THAT?

It is because the French-Canadians have not done their duty that Conscription had to be resorted to.

The French-Canadians have made it perfectly clear that they do not like the war and are against Canada participating in it further. Some of them even go to the length of saying that the soldiers should be brought back from the front.

The Nationalists are demanding that the men who have been enrolled under the Military Service Act be disbanded and sent back to their homes. To secure the Nationalist support Laurier-Liberal candidates in Quebec have signed the following pledge:—

"I, the undersigned, candidate in the Federal Elections, undertake by these presents if I am elected, to demand the immediate suspension of the Military Service Act, 1917, and of all its effects until Canadian electors have pronounced by way of plebiscite and should the majority of the electors condemn it, that it be considered as null from its origin and that in consequence all exemptions be disbanded.

"I also undertake to vote against any Government which should refuse to adopt the above enunciated policy."

OUR BOYS IN EUROPE AND HOME PROTECTION

The men on the firing line represent the pick of our country's youth. Many were rejected because of physical deficiency. Many times the kidneys were to blame.

If we wish to prevent old age coming on too soon, or if we want to increase our chances for a long life, Dr. Pierce of the Surgical Institute, Buffalo, N. Y., says that you should drink plenty of water daily between meals. Then procure at a drug store, Anuric (double strength). This "Anuric" drives the uric acid out and cures backache and rheumatism.

If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only little meat once a day, is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month.

Send Dr. Pierce 10c for trial pkg. Anuric—many times more potent than lithia, eliminates uric acid as hot water melts sugar. A short trial will convince you.

Preston, Ont.—"I am pleased to express my experience with Anuric. I have been troubled with rheumatism in right limb and hand for several years, and lately in left shoulder. The only way I could lie was on my back. I had great difficulty to sit down and more to get up. Lately I had a very severe pain in my back. I have taken Dr. Pierce's Golden Medical Discovery several times with the most satisfactory results, so I consented to give his Anuric Tablets a trial. The pain in limb and shoulder has stopped entirely and in right hand it is very slight and getting best all the time. I am now sit or lie in any position I wish without discomfort or pain. I recommended the Anuric Tablets to two parties and they both claim decided improvement. I certainly will recommend them to any one troubled with the kidneys; there is nothing nearly so good." Mrs. Jos. Gemmell, 68 Queen Street, corner Dulke and Waterloo.

Canada Must Unite Against Nationalist-Clerical Influence

Hon. N. W. Rowell made the following address at North Bay:

"When I last visited North Bay, in the early part of the month of May, I spoke to you on the issues of the war, and urged, in view of the critical situation which faced us, that the time had come for compulsory military service, and the formation of a Union or National Government, and that without these Canada could not throw her whole energies into the war.

"At that time Sir Robert Borden had not proposed either. My presence here as a member of the Government is an evidence that I believed in the policies I was advocating. But there are further and other reasons why I am a member of the Union Government.

"The vote on the Military Service bill disclosed what Mr. Bourassa had continuously asserted, that Quebec's attitude towards the war was different from that of the other Provinces, for while the members from the other Provinces by an overwhelming majority were in favor of the Military Service Act, members from the Province of Quebec were almost a unit against it.

The Attitude in Quebec

"The people of Canada must choose between a Government composed of the leaders of both political parties in all the Provinces of Canada save one, or a Government brought into existence by the support of the Nationalist-clerical reactionaries of the Province of Quebec.

"No one wishes to do other than full justice to our fellow citizens in the Province of Quebec. We may concede they are conscientious in the views they entertain, but surely they cannot expect, when they have not shared the burdens and sacrifices of this war, to dominate and control the Government of Canada and force the other Provinces of Canada, which have made the sacrifices, to yield control to them. The future of Canada, the welfare of our boys at the front, and the cause of liberty demand the decisive defeat of the Nationalist alliance in the Province of Quebec.

"The only basis for permanent unity between the races in Canada is to be found in mutual confidence and respect based on common service and common sacrifice. So long as the people of Quebec deliberately isolate themselves from the rest of Canada by refusing to join in the common service and the common sacrifice, just so long will they assert barriers between the races, which can only lead to disunion and disaster. The hope of unity in Canada lies in Quebec joining in wholehearted support of our men at the front and the cause for which so many have died. And if Canada expresses her voice unmistakably on the 17th of December, we may expect, we have every right to expect, that Quebec will loyally accept the decision, the boats for Canadian unity will be restored, our troops at the front will be reinforced, and the cause of democracy and human liberty will receive a new vindication."

Blame to Blame

"The present attitude of the Province of Quebec may be due to several causes. Undoubtedly the persuasion agitation carried on by Mr. Bourassa and his Nationalist associates against Great Britain and France and Canada's participation in the war has most powerfully influenced the feeling and attitude of the Province of Quebec. And apparently the majority of the cures throughout the Province shared his Nationalist, clerical and reactionary attitude.

"In this attitude they were undoubtedly encouraged and abetted by the members of the religious orders from France, who found an asylum in Canada and used that asylum to undermine Canada's strength in the struggle. It is a misfortune that they did not follow the example of the priests of the Catholic Church in France, who threw themselves into the struggle of their people to preserve their national existence, and by their courage and sacrifice won for themselves a new place in the hearts and affections of the French people.

"We might as well frankly face the issue. There is a Nationalist, clerical and reactionary movement at work in the Province of Quebec which to-day dominates the political situation in that Province, and is using this hour of grave national peril to dominate the political situation throughout the Dominion of Canada.

"As Liberals we have claimed that the surrender in the year 1911 of the Conservative party in the Province of Quebec to this Nationalist-clerical influence was a grave national blunder, from which we have suffered through the whole period of the war. But the surrender of the Liberal party to-day in the Province of Quebec to this same influence when Canada is at war struggling for her existence is a national calamity, for the baneful consequences of which Canada will suffer for generations and the only hope of averting the full measure of the calamity is to decisively defeat the effort now being put forth by these influences to dominate the political life of Canada and take Canada out of the war.

Opposed to National Propaganda

"Sir Wilfrid Laurier had been twenty years younger I believe he would have fought this sinister influence in the Province of Quebec, just as he did in 1898, and would have triumphed over it.

"I was opposed to the Nationalist propaganda in 1911, when Canada was at peace. I am doubly opposed to it to-day, when Canada is at war. The Liberals of Ontario were united in opposition to this Nationalist propaganda in 1911; they should be doubly united in opposing it to-day.

"One reason why I am in the Union Government is because I found Bourassa was dominating the whole political situation in Quebec. When the Liberals leaders urged that Sir Wilfrid should take a stand in connection with the Military Service Act and the war which we could support, the invariable answer was that if he did so he would surrender Quebec to Bourassa to carry seats in the Province of Quebec, the Liberals in Quebec have in effect accepted his policy.

"When Sir Wilfrid announced his policy of a referendum Bourassa endorsed it, and gave as a reason for endorsation that it was his policy which he had already advocated. A Nationalist policy is no more palatable to us, even if covered with a Liberal veneer, but it is vastly more dangerous, because thus disguised it may secure the support of thousands of honest, sincere, public spirited Liberals throughout Canada, who would repudiate it and fight it to the end of it were naked and undisguised Nationalism.

Tragedy of the Situation

"Those of us who had knowledge of the situation found ourselves compelled to choose between supporting Sir Wilfrid Laurier and a policy shaped to secure Nationalist support, and which we believed would take Canada out of the war, or to decline to follow him further, and to support a policy which we believed to be essential to maintain our men at the front, and to insure Canada's continued participation in the war.

"The tragedy of the present situation is that for the so-called purpose of saving Quebec from Bourassa, Sir Wilfrid, in the declining years of his life, has thrown the influence of his great name and of his powerful hold upon the imagination and the loyalty of the thousands of our Canadian citizens against a measure essential for national defence. Mr. Bourassa has declared: 'We do not ask for anything better than to help Sir Wilfrid Laurier overthrow this Government of national treason!'

"Mr. Bourassa and the Nationalists of Quebec to-day are behind Sir Wilfrid Laurier in this fight, and the Nationalist-clerical reactionary forces of Quebec are now endeavoring to extend their influence throughout Canada, and to organize the discontent growing out of the operation of the Military Service Act, organizing those elements of the population opposed to Canada's participation in the war, and seeking to defeat the efforts of the Government to reinforce our men at the front. The fact that many honest, sincere and public spirited citizens all over Canada, under a sense of so-called party loyalty, are unconsciously supporting this propaganda, compels one, as a ... nalism' utopic Most Chance

F. A. McKenzie

"My Paper!"

When Ambassador Gerard left Berlin, the only correspondent who traveled with him, and the last American Newspaper man to leave Berlin, was Carl Ackerman of the United Press Service.

Mr. Ackerman's dispatches appear exclusively in The Toronto "Daily Star."

About once a month we "Scoop" every other paper in the Province with the aid of Mr. Ackerman and other United Press correspondents.

The only Canadian Woman Correspondent in the War Zone—Miss Rosamond Bouttbee—sends us dispatches exclusively.

In London the veteran War Correspondent, Mr. F. A. McKenzie, assisted by The Star's own Staff, cables the big news of each day.

Thomas Geggie, late Sergt.-Major K.O.S.B., writes regularly upon Imperial and Military matters.

The big news from the United States comes to us through the Chicago Daily News' special correspondents, as well as their War cable service.

We also carry the cable service of Windermere of the "Montreal Daily Star."

We maintain our own staff in Ottawa, Montreal, Quebec and Winnipeg, and our local News Service is right up to the minute.

Our special articles are contributed by foremost writers on each subject.

Our regular news service consists of all Canadian Press, American Associated Press and Canadian Associated Press dispatches.

We also have exclusive rights to the pictures of the London Daily Mirror, Underwoods, Daily Mail, Topical Press Services, as well as Canadian Official War Records, Sports, etc.

In brief, The "Toronto Daily Star" is one of the great broad-gauged newspapers of the World. By reading it you will be kept well informed upon every subject that a good citizen and man of the World should know about.

Read The "Toronto Daily Star" each day. You will thoroughly enjoy it, and be glad to acclaim it in all sincerity as "MY PAPER!"

Order it to-day.

The price is **$3.00 per Year in Advance.** You may send this to the publisher of your local paper, to your postmaster, or direct to

THE SAD STORY OF THE STRUGGLE FOR LIFE

is frequently revealed in these war times even in this well-to-do Province. Hard enough to be poor—still worse to be sick and poor.

The lot of the consumptive is a specially trying one. Only recently a family was discovered living in two small rooms over a store. At one time they had occupied a comfortable home but the father took sick and had to give up work. With the savings all gone, they were forced to sell the furniture to buy food. When the man was found to be a consumptive, this was the opportunity of the Muskoka Free Hospital to bring relief so that not only would the stricken husband have a winning chance for life, but more desirable still, the wife and children should be removed from danger of contracting the disease. Under skilful guidance the home was cleaned up and the family temporarily provided for. It is now reported that the patient is doing well, with every chance of recovery.

This is the great work carried on by the Muskoka Free Hospital which is now appealing for help.

Contributions may be sent to W. J. Gage, Chairman, 84 Spadina Avenue, Toronto, or Geo. A. Reid, Secretary-Treasurer, 223 College St., Toronto.

The Actual Results
— OF THE —
DOMINION LIFE
are unexcelled.

A Typical Case

The holder of Policy No. 31 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 13 per cent. in each of the years 6 to 19, by 28 per cent. in each of the years 11-15, by 40 per cent. in each of the years 16-20, and a reduction of 50 per cent. in the years 21-22. In the said year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

Is a United Quebec to Rule All Canada?

This, the most tremendous question in Canada's history, is to be answered within ten days.

Our answer involves Canada's honour, her freedom and her [illegible]. Old-time party questions are being advanced to obscure the gra[illegible] issue ever placed before a nation. Canada is in real danger. The clouds that obscure her vision must be brushed aside so that the great issue stands forth clear and distinct.

"Is a United Quebec to Rule All Canada?"

To-day, in our national crisis, Quebec alone among all the provinces stands more united than ever before. She knows what she wants:

(1) Withdrawal from the war.
(2) Bilingual schools everywhere.
(3) Weakening of the ties of British connection.
(4) Political control of Canada.

From the Ottawa River to Labrador and the Gulf, a common purpose actuates Quebec in her determination to profit by the factional divisions of Canada and to impose her will upon all the people of Canada.

Within the last few weeks, Quebec has mobilized all her forces to dominate Canada under the unified leadership of Bourassa and Laurier. Canada knows that these two men in their earlier days were personal friends and political associates. Canada knows how in recent times they gradually drew apart—until in 1911 Bourassa opposed Laurier and helped to bring about his defeat, at the polls. Canada knows that from that time forward, until a few weeks ago, the breach between them steadily widened until envy and hatred, each toward the other became the possession of both. Bourassa and his followers were anathema to Laurier.

Should not the people of Canada ask themselves, before it is too late, why these two men have suddenly agreed to bury the past, why this sudden embrace each of the other? If we will but let the scales drop from our eyes the answer is obvious. The all-compelling influences of Quebec have combined to force the union of Laurier and Bourassa in the common purpose of French Canadian domination.

We concede the right of French Canadians to make common cause of anything they think it is in their interests so to do. This is a free country. But as the French Canadians have already combined to assert their views, it is the duty of the hour that we English-speaking Canadians get together and present to Quebec a united front in the defence of our rights. This is imperative.

With sixty solid seats Quebec is about to accomplish her designs. Bourassa, the real master and idol of Quebec, is in sight of his goal.

To attain her purpose, Quebec has not scrupled to ignore British traditions and to suppress freedom of speech. So thoroughly organized is her campaign to prevent even the discussion of the war that Unionist candidates are prevented from holding public meetings throughout that Province. The Unionist minority in Quebec are the victims of organized obstruction.

To be successful in her determination to rule all Canada, Quebec has but to secure a few seats in each of the other Provinces. Quebec leaders now seek to divide the rest of Canada into factions by insidiously bringing into political discussion old-time party questions, to divert the public mind from Quebec, her purpose and her ambitions.

United in her determination to quit the war, Quebec would compel a divided Canada to do likewise. By union only can the English-speaking people prevent this calamity.

However well-meaning Laurier candidates in Ontario may be, they will be helpless against a united Quebec.

Apart from the splendid work of the small English-speaking population, Quebec has failed the Red Cross, has failed the Patriotic Fund, has failed in recruiting and has failed in the Victory Loan. Dare we trust our soldiers, their wives, their children, their pensions and their allowances to Quebec, that will neither give, enlist nor invest, and which will resist taxation for the support of our men and their dependents?

Canada must decide whether she will become a deserter and quit with Russia, or fight to the end for liberty with Belgium. This decision must not be dictated by the only Province which has shirked its obligations throughout the war.

All Canada knows that Germany has been working through agents, spies and bribes in every country in the world. The latest evidences are the revelations recently made to the world by President Wilson. Do we Canadians think the Kaiser has overlooked Canada? If we do, what a fool's paradise!

Germany benefits by division among her enemies. Upon whom would she look in Canada as furthering her designs? Not Sir Robert Borden, Mr. Rowell and their colleagues in the Union Government. That is certain. But can the same be said with respect to the leaders in the Province of Quebec whose attitude in this war is against Canada's continuation in the war. We regret to be compelled to say these things, but we must not shut our eyes to facts.

The Citizens' Union Committee, anxious for the maintenance of British ideals and traditions, views with alarm the menace of French-Canadian domination with its inevitable influence upon the home, the school and the state.

We, therefore, call upon all English-speaking men and women to realize that—Canada, divided by political factions and old-time party questions, is at the mercy of a united Quebec. Union Government alone can save Canada from the menace of French-Canadian domination.

OBITUARY

ALEX THOMPSON

Mr Alexander Thompson, who was a resident of the south end of town, near the station, since 1899, died at the home of his daughter, Mrs Wm H McLean, at Ellengowan, on Dec 5th, after a short illness. The deceased was born near Belfast, Ireland, and came to Canada in 1845, when he was 15 years of age. He lived at Masham, Quebec, until 1869, when he came to this part and farmed on the 8th of Bruce for ten years, after which he retired to Paisley. He was married in 1855 to Elizabeth Hall, who survives him. The family surviving are four sons and four daughters—George, of Toronto; Foster, of Hepworth; Alexander, of London; Alfred, of Amabel; Mrs Robt Mahon, of Masham, Quebec; Mrs Alex McDonald, of 10th Bruce; Mrs Geo Fraser, of Hepworth. The funeral took place on Friday afternoon to Stark Vale cemetery, the services conducted by Rev Mr Crighton, the deceased having been a life-long Methodist. All members of the family were present except George and Mrs Mahon. Other relatives from a distance were Mr and Mrs John Bryce of Owen Sound; Mrs Wilson from London, and Miss Mahon from Masham, Que. The deceased was a quiet but genial old gentleman, well respected among his friends and acquaintances.

ALEXANDER McGILLIVRAY

Upon the death of Mr Alexander McGillivray, which took place on Saturday night last, it can be said that the last of the sturdy pioneer settlers of Lovat locality has passed from the scene of their earthly labors and accomplishments. Mr McGillivray was born in Mull, Argyleshire, Scotland in 1829, and in 1847 joined the rush of emigrants to Canada. For five years he was located in Glesel Tp., county of Grey, and then he homesteaded on lot 34, con 9, Bruce Tp., which continued to be his abiding place to the end of life. He married Catherine McPhail, who predeceased him by fifteen years. They are survived by a family of five sons and two daughters—Colin, of 13th Bruce; John, in the Yukon; Archie, near Port Arthur; Duncan, on the homestead; and Alexander, 12th con (ex-reeve) Mrs Dug McArthur, Port Elgin; Mrs Driver, of Pasadena, Cal. The deceased was known as a man of the highest integrity, outspoken and pronounced in his views, a friendly helpful neighbor. He took an interest in those matters that made for the welfare of the community, but other than having served a term as township councillor did not actively participate in public affairs. He was a Presbyterian in religion and a Reformer in politics. The funeral on Tuesday afternoon was conducted by Rev Mr Little of Knox church. Interment was made in the Lovat cemetery.

JAMES McARTHUR

That the race is not always to the swift nor the battle to the strong has again been exemplified in our midst by the death of James McArthur, of Lovat, who was one of the most stalwart young men of the whole country side, and a splendid specimen of physical manhood. Up to three years ago he was in the best of health but then had an attack of appendicitis and underwent an operation. About a year ago he complained of stomach trouble, and then within the last three months he went to specialists at different times for examination and diagnosis. Three weeks prior to his death he was at Guelph hospital for a few days and after his return his condition failed rapidly. On Monday of last week he had a hemorrhage from ulcerations in the stomach, and on Wednesday he passed away. His cutting off in the vigorous years of full manhood is a severe blow to his widow and family and friends of many years. James was a dutiful and faithful son, who took a large interest in the work and business connected with the farm. The utmost sympathy is expressed for them from all sections of the community. The funeral on Friday afternoon was held under the auspices of the I. O. F., the deceased having been a member of Abiram Lodge, Paisley. Rev G C Little, B.A, of Knox church, Paisley, conducted the service at the house.

MRS. WM. BROWN

There passed to her reward on Dec 2nd Mrs Wm Brown of Lockerby, after a short illness culminating in paralysis. She was born at Stonehouse, Lanarkshire, Scotland, on Oct 5th, 1851, being a daughter of the late Thos Bryce of Saugeen. She came to Canada in 1852 with her parents, who settled in Saugeen Tp. She was married to Mr Wm Brown in 1877, living for nine years at Massie Mills, in the Tp of Holland, Grey Co, and since then had resided at Lockerby, with the exception of three years spent in Owen Sound, where Mr Brown's business called him. She was a woman of sterling qualities, a good, noble woman, one whose door was ever open to entertain those who came to it. Her hospitality was genuine, and she was beloved by all who had the privilege of her friendship. Besides the sorrowing husband, there are left to cherish the memory of this kind and loving mother five sons and four daughters, as follows: John, in Elderslie; Thomas, in Lafleche, Sask; Will, at home; Capt (Dr) Jas H, Toronto; Russell, at Lockerby; Mrs A C Ross, Calgary; Mrs Wm Hyde, Elderslie; Alice, at home; and Mina, in Toronto, all of whom were present at the funeral except Mrs Ross and Thomas. The funeral was conducted by Rev Mr Little of Knox church, Paisley, of which congregation deceased was a member, and was largely attended. Mr Little paid the highest tribute to the memory of the departed. The pall-bearers were four sons, one son-in-law and her youngest brother. The floral offerings from the family and many friends were beautiful. The sympathy of the entire community goes out to the bereaved ones in this their hour of trial.

"We would not miss the message
Her sweet life was meant to be,
Nor yet the deeper lesson—
When we gave her back to Thee.

As well loved there as well loved here."

Shrewdness!

Fredericton, [illegible] year, the Experimental [illegible] increase of 69 bushels and 33 pounds of carrots per acre by adding 650 pounds of fertiliser to the acre [illegible]

Shrewdness suggests that you put off your Christmas shopping until the last day. Shop early, when you are not rushed. You get the best choice of goods. We are prepared with an extra heavy stock for this year's Christmas trade.

Groceries

This department is full of Choice Fruits, Peels, Spices, Nuts, etc., for your Christmas baking.

Confectionery

All the dainties in Confectionery you will find here. Choice Candy by the box, from 25c each up to $1.50 each, also a great variety to choose from by the pound.

Big Juicy, California Oranges, Grapes, Apples

China

Nothing nicer and more useful than a nice piece of China. Our new stock, which has just arrived, was bought last winter. The prices are remarkably low. You will be surprised when you see this array of dainty China.

Slippers

A fine selection of warm House Slippers for every member of the family—dainty in appearance and not expensive.

Produce

We want your Dressed Poultry, Butter, Eggs, &c., and will pay the top price in cash or trade.

Goods Delivered — Both 'Phones

For Your Motorist Friend

A Fitting Christmas Gift

THERE is no need to worry about what to give "him" if he drives a car. Whether it's a Rolls-Royce or a Ford, you can settle the gift problem right now by buying him a Goodyear Tire-Saver Kit.

This neat little Kit is probably the most appropriate present [illegible] can give a motorist. [illegible] real need, it will be appreciated even more than something of a "personal" nature costing twice as much.

The Goodyear Tire-Saver Kit is packed with articles for the conservation of tires—patches, putty, blowout protectors, even an air-pressure gauge. Your motorist friend will at once recognize the value of each thing. Afterwards, when he actually uses the Kit, he will wonder how he ever got along without one before.

You, too, will enjoy giving him a Tire-Saver Kit. For you will experience the satisfaction of giving something eminently *fitting*. You will be expressing your gratitude, in a practical way, for those pleasant motor drives last summer.

He will probably receive some "motor presents" from his other friends. You can be the one to give him the "motor present" he needs most—a Goodyear Tire-Saver Kit.

The Goodyear Kit comes in two sizes — one for small and the other for large cars. Just tell us the make of "his" car.

Price:

(3½-4 in.) - $4.75
(4½-5 in.) - 5.00

GRUDGES

It's fierce the grudges some men hold, as through this world they go; they carry hatred in their hearts for forty years or so. Some slight is put on them sometimes maybe they suffer wrong, and then they start right in to hate, and oh! their hate is strong. I'll get that geezer yet, they say with an expression grim, and on their face we see a hint of what they'll do to him. So on they go to plot and scheme to work their rival's fate. They only have one aim in life, it seems, and that's to hate. They hug their grudges to their breast, each fancied wrong they nurse, and every time they look at it, it seems to them much worse. For hatred like most other weeds, it only needs a start; the soil that hatred grows in best is just the human heart. It grows on like an evil tree; its progress ne'er is stayed, and one poor foolish life is lived forever in its shade. No more for him there shines the sun, no more the wild birds sing; he's stalked within that gloomy space within his hatred ring. Around him little children play with laughter and with song, but he is deaf to all their joy and sees not but his wrong. And thus he lingers on a space his bitter cud he chews, before him nature spreads in vain her very fairest views. He's blind and deaf to every charm; oh, sad indeed's his fate. He has no thought for anything but just to nurse his hate. And then of course at last he dies; beneath the sod he's placed, and one who knows his story sighs, there's one life gone to waste. The lesson men is not to hate; forgive. If not forget, for hatred pays no dividends; its harvest is regret. This life is such a short affair, so short is here our stay, that hatred's not worth while at all. So can it right away. —Pete, in Toronto Star.

MAXWELL

Most Miles per Gallon — Most Miles on Tires

Save Gasoline—Save Tires —Drive a Maxwell Car

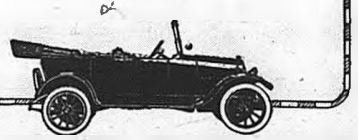
The automobile has suddenly become more than ever a necessity in passenger service.

We must go about from place to place to carry on our part of the world's work.

We can no more get along without motor cars than we can without the telegraph or the telephone.

But motor cars to-day must be light, durable, economical.

The Maxwell has always been light, durable, economical—made so to meet an immense, sensible demand that has existed all the time.



To-day that demand is universal.

Don't take any chances.

Buy a Maxwell—the standardized car whose economy and durability have been proved.

—Postmaster Roland of Deemerton has probably made the record for intense production. He had less than one acre under cultivation this season but marketed 7,000 pounds of Dutch salt onions for which he received $160 a ton and $500 worth of ginseng.

REMEMBER the Great Economy of
BOVRIL

GAMBLER'S LUCK

By George Munson.

(Copyright, by W. G. Chapman.)

Jim Davis, in the train, cursed at the delay in reaching his destination. He was in a bad humor with the world—not that this was unusual with him. His gambling trip, which was to have netted him enough for six months of extravagance and luxury, besides the modicum needed for Molly, had produced only a few hundreds, thanks to the new vigilance of the police.

He watched the girl in the opposite compartment. She was a pretty girl, with a tear-stained face at which she dabbed furtively with her pocket handkerchief. She looked as Molly had looked, ten years before, when he had persuaded her to throw over slow-going Jack Douglas and become a gambler's wife.

He knew that Molly had regretted her choice every week of her life since then, and he had taunted her with it and taken pleasure in inviting Douglas to the house. He could see their love for each other, unexpressed. What a fool Douglas was, not to take advantage of his long absences! But what a good thing that Molly was a church member and so incapable of deceiving him!

He cursed again as the train sped on. He had long since tired of Molly. Still, it was convenient to have the little household drudge at home, to cook and slave for him in the rare intervals of his presence there.

Suddenly the train lurched, swayed, swung giddily along the edge of the embankment and crashed into nothingness!

Jim Davis was on his feet, staring at the ruin. The girl who had awakened his interest lay pinned beneath a beam. There were heartrending groans and cries everywhere. By a miracle he, Davis, had escaped unscratched. Gambler's luck!

He did not stop to think of the sufferings of his fellow travellers. The wreck had taken place just at the outskirts of his home town. Nearby a trolley car had stopped. A crowd was gathering, running from every quarter of the compass. Davis cursed as he pushed his way through them and mounted the trolley. Soon he was speeding far from the scene of the disaster.

Half an hour later he was standing in his apartment. It was queer that Molly had left the door unlocked. He would take it out of her for that. He approached the little, barely furnished living room quietly, intending to surprise her and see the happiness fade out of her eyes. He flattered himself that he could read his wife's face like a book.

To his surprise he saw Douglas standing there, and Molly, with tear-stained face, leaning her elbow on the mantel and looking at him attentively.

"I am sorry," he said conventionally.

"It is terrible," said Molly.

"The newspaper gives his name among those killed. I thought it my duty to be the first to tell you."

Molly put her hands in his. "Thank you, Jack," she answered. "I can't pretend to be sorry."

"You ought to be glad," said Jack Douglas, flushing.

Jim Davis chuckled. The situation was amusing—extremely so. The poor fool could have divorced him years before, and she had felt bound by her stupid promise at the marriage altar. And even now these two dared not tell each other of their love.

Jim was mistaken there. Douglas held her hands tight in his own. "Molly, you know what this means to me," he said.

She leaned her face against his cheek. "He was a [illegible]," she murmured.

"Sometimes I think of the [illegible] used to love," she answered. "He was not wholly bad, Jack. But I shall try to forget him."

She raised her head and their lips met. Incredulity and rage swept over Davis' face. He had not dreamed that this love-making would go on in the face of his supposed death. He thrust the door open and stalked into the room.

"A little premature, Douglas," he sneered. "I'm sorry to break up this love-making scene, but I couldn't die when I knew how much it would mean to you, Molly!"

To his amazement neither answered him. Jack put his arm about Molly and drew her closer to him. Jim Davis ran toward him, his fists clenched.

"Get out, you blackguard!" he roared, making a vicious swing at the other.

His fist seemed to pass right through Douglas. And still there was the loving smile on Molly's face. And while Jim Davis looked at them in consternation everything faded, and he became aware of an intense and unendurable pain that gripped his body and wrung it as if in a vise.

He opened his eyes and the light of day almost blinded him. He was lying under the wreckage. It had all been a dream. Near him was the girl whom he had seen, pinned under the

"Help Me!" She Pleaded.

beam, but not severely hurt. She was free above the knee, and it rested lightly upon her leg, without pressing there. Still, to escape was impossible.

Jim Davis rolled toward her, and every motion was like the plunging of knives into his body.

He tried to lift the beam, but of course, could not. And suddenly a fresh outcry from near by, and a sense of intolerable heat, startled him. The wreckage was afire from the engine. The flames were creeping nearer. Men were working frantically to remove the injured, but there was hardly time.

A burning cinder lit on the girl's dress. Jim Davis picked it up with his free hand and pushed it away. He knew now that he was paralyzed from the waist downward.

"Help me!" pleaded the girl again, in terror.

The flames were circling about them. A trick of the wind had sent a shower of sparks across the spot where they lay, and the wrecked cars on the other side of them were blazing. And then—two men rushed through the smoke and grasped him.

"Not me!" said Davis. "There's a girl there—under the smoke. Get the beam off her leg."

As the girl's choking cry came to their ears they released the gambler and plunged into the smoke. Davis watched them axiously. Would they succeed? They strained with all their might at the fallen beam, while the red sparks whirled about them, and the smoke covered them. And Davis watched more eagerly than he had ever watched anything in his life.

Suddenly, with a mighty heave, the men got the beam away. Davis saw them grasp the girl and carry her to safety. And then with a roar the flames swept over him.

Perhaps with that act of abnegation the gambler made atonement for his misspent life. In that last moment he understood that it had been granted him to visit his wife in the spirit, to learn and understand. But instead of bitterness there was only joy in his heart that Molly was to be free.

So, smiling at the last throw of fate, Jim Davis yielded up his body to the flames.

Ingrowing toenails may be radically cured by a simple operation. If the difficulty is slight, it may be cured by wearing a broad-toed shoe, scraping the center of the nail and taking care to give the nail a square edge to prevent the corners from penetrating the flesh.

Twentieth Lesson—Sauteing Meats.

Sauteing of meat is cooking meat in a small amount of fat. It is virtually impossible, when cooking meat in this manner, to prevent the meat from absorbing the fat, thus making it difficult to digest. This is particularly true during the warm weather and therefore this method should be eliminated then.

Butter should not be used for cooking meat. By this method, owing to its low-burning point, the fat particles burn and decompose, when subjected to high temperature. Sauteing meat has nothing to recommend it to the housewife. Pan broiling will produce the digestive [illegible] food and eliminate

Pan broiling is also a [illegible] method of cooking. You simply heat frying pan and place in the meat, turn and sear the other side. Repeat this every two minutes until meat is cooked, using same test as in broiling. It is also necessary that all fat melting from meat during process of pan broiling be drained off. When necessary to cook meat in a fat, it should be protected by a coating such as egg and breadcrumbs, or by dipping in flour and then placed in very hot fat to brown. The meat can afterward be cooked at a lower temperature to finish it. This method prevents the meat from absorbing the grease.

Do not use a fork to turn the meat during process of cooking; the prongs of the fork puncture it, allowing the juices to escape, thus lessening its food value. The escaping juices do not remain in the pan; the heat causes them to evaporate.

Follow these points when buying meat:

Shortly after the meat is cut it [illegible]

It should be bright red color.

have a pleasant meaty [illegible] and purchase meat with a strong disagreeable smell.

A layer of fat should cover the overlaying muscles. The fat should be creamy white and of firm texture.

VALUE OF SOUP IN THE DAILY DIET.

Methods of cooking in the early history of mankind were by stone boiling, a process which occupied nearly a day to complete.

Meat juices or an addition of water and the animal flesh was the basis of soup. Soupmaking is an art permanently belonging to the French people. In Europe soup enters largely into the daily life of the people; from peasant to king the daily portion of soup is taken. The exquisite French fashionable take their morning cup of bouillon abed.

The addition of a plate of soup to the menu stimulates the stomach's action, causes the digestive juices to flow and is readily absorbed, giving the body immediate nourishment without distress to the digestive organs.

For the school child, tired business men and women it is an ideal stimulant, nourishes and refreshes, and with bread or crackers makes a substantial lunch.

Soups are divided into three classes—first, stock; second, cream; third, fruit soups. Soups made from meat and bone are called stock; those without stock as cream, vegetables, clam and oyster soups, and, lastly, those made from fruits. Stock or soup made from meat and bones, cooked by long and slow boiling, which dissolves the soluble elements of the meat and bones into water, thereby enriching it.

The Stock Pot

This should be a deep pot or kettle with a tight-fitting lid; this is important so that none of the steam may be lost by evaporation; the steam contains the aroma or fine volatile oils and essentials which all pass into the air. In a fairly large family little meat need be purchased for the stock pot, if the housewife insists that all the portions of bone and trimmings be sent with the purchases of meat. The French women look with horror on the women leaving all this scrap and trimming to the butcher.

To Make the Stock

A soup bone from the shin of beef, which is full of nutriment, costing about ten cents, will have nearly two ounces of meat attached; one pound of the scrap end of neck of veal, four quarts of water. Wash bones and add cold water and bring slowly to boil, skim and then cover closely and cook four hours. By this time the meat will have fallen from the bones. Strain and set aside to get cold. To let stand overnight is best.

Then remove all the fat from the top. This is the basis of all soup sauces and gravies, rich in protein and in mineral matter and in gelatin. The meat can be taken from the bone, run through a meat chopper and used for meat loaf, croquettes and meat biscuits or sausage, and it will make a tasty hash when combined with potatoes and onions for breakfast.

You now have a delicious and nutritious broth, without seasoning of any kind, which will keep in cold weather two or three days. In warm weather it must be returned to the pot, brought to a boil and skimmed, left to cool off and put in an icebox.

Small portions of meat, ham, any trimming and bones that have been accumulated may be added. Chicken feet, scalded with boiling water to loosen the outer skin, which must be peeled off, together with the giblets of fowl, may be added to the stock pot. Seasoning and the addition of vegetables in warm weather cause it to sour. Many varieties of soup are possible with the use of this stock.

Vegetable Soup

One pint of stock, one cupful of tomato pulp, made by scalding and peeling the tomatoes, or use canned tomatoes; one-half cupful of diced potatoes, one-half cupful of mixed vegetables (cabbage, turnips and peas may be added), one-half a carrot, cut in dice; one tablespoonful of parsley, two tablespoonfuls of flour, salt and pepper to taste, and portion of bunch of potherbs. Take one bunch of potherbs, divide into small bunches, tie each with a string and use one of these in the vegetable soup. The balance may be dried and kept in a fruit jar for future use.

Put herbs in stock, add tomatoes, let simmer, cook vegetables in one pint of water untill tender, add water and all to the stock, add seasoning and flour mixed with a little cold water and cook for five minutes.

Clear Soup

Two tablespoonfuls of fat, one onion, fry until brown, add tablespoonful of flour, brown well, pour in one pint of stock, cook five minutes, adding seasoning, salt and pepper to taste; strain in soup tureen, sprinkle with one tablespoonful of finely chopped parsley. Serve with bread cut in finger lengths and toasted.

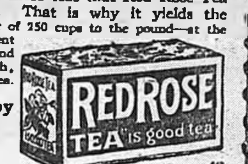
Potato Soup

Fine for luncheon. Children delight in this on a cold day. Three potatoes, one-half onion, one stalk of celery, one teaspoonful of salt, one-half teaspoonful of white pepper, one tablespoonful of flour, one-half cupful of milk, one-half cupful of stock, one-half cupful of water. Boil and mash potatoes. Heat milk, put celery and onion on to cook, add hot water and seasoning to the potatoes, rub mixture through sieve and put to boil again. Melt butter, add flour and when it bubbles add stock, milk and potato mixture, bring to boil, cook three minutes and serve.

MUSIC IN THE HOME

How Music is Used on the Italian Front.

At various points along the Italian front not far from the firing line, there is being given concerts to the soldiers and we are told that the idea originated with the supreme military command. So much good has been accomplished by these concerts that an organization has been effected to extend the concert arrangements. It is said that already six wooden theatres have been erected, all in conquered territory, and that the task of securing talent is being made easy by the ready assistance of Italy's foremost musicians and actors. At one of the first concerts General Capello himself was present.



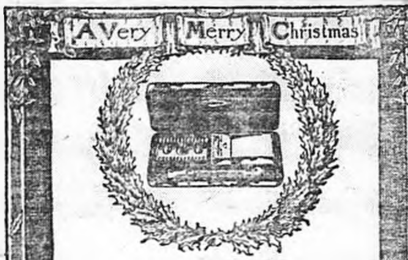
The first programme took place in one of these soldiers' theatres right opposite the Carso; the ruins of bombarded houses all round, in view of Austrian entrenchments in all their complicated system. A variety artist was singing a favorite song when an enemy aeroplane was sighted. She continued unperturbed while the Italian aircraft chased away the untimely intruder.

An account of these concerts has reached the English press from Italy and the following is an extract sent home by a Canadian soldier: To these concerts soldiers who are enjoying the customary rest after a trying time in the trenches come in thousands to find that relaxation and recreation from nervous tension which are a vital necessity for the preservation of the health of the combatants. Not much drama or light comedy is given. Soldiers who have just come out of the jaws of hell do not want to see the petty nothings of every-day life. They want, and get, light entertainment in the form of farcical plays: something to laugh at, and forget the misery of the past and present. Operatic arias are of course the order of the day, seeing that they form part and parcel of the Italian organism. Then certain elements in the audiences crave for, and get, the latest music-hall songs. Famous actors recite in the divers dialects so dear to the natives of the different departments of the country. In their special instance a hearty laugh, unbridled and unrestrained, refreshes their tired, racked nerves, better perhaps than a night's rest.

ASSAM Teas for Economy

Assam teas are the strongest and richest grown. It is of these teas that Red Rose Tea chiefly consists. That is why it yields the very large number of 250 cups to the pound—at the cost of about a cent for five cups, and every cup rich, strong, delicious tea.

Kept Good by the Sealed Package



643

Tommy Atkins Appraised.

"It is philosophic trust, coupled with absolute lack of imagination, which makes the British soldier the most invincible person in the world," says Major Ian Hay Beith, in "All In It." "The Frenchman is inspired to glorious deeds by his great spirit and passionate love of his own sacred soil; [illegible] fights as he thinks, like [illegible] wins through [illegible] Tommy [illegible] difference to the pros and cons of the tactical situation. He settles down to war like any other trade, and, as in time of peace, he is chiefly concerned with his holidays and his creature comforts. A battle is a mere incident between one set of billets and another. Consequently, he does not allow the grim realities of war to obsess his mind when off duty. One might almost ascribe his success to the [illegible] melancholia, innutrition, diseases and chronic poison- [illegible] gerous trades. A persist- [illegible] flag, but the bread.

A Very Merry Christmas

The business of being a man has its advantages these days as well as its responsibilities—especially if someone thinks enough about him, his needs and his wishes, to choose for his Christmas gift

The Gillette Safety Razor

Most men are practical. The welcome gift is the useful gift—the Gillette—that fits right into a man's intimate personal life, makes things easier for him, and proves its quality by the way it shaves.

At any good Hardware, Drug or Jewelry Store you can pick out a Gillette Set that will be sure to give him lasting pleasure. If you have any trouble getting what you want, write us and we will see that you are supplied.

MADE IN CANADA
KNOWN THE WORLD OVER

FREE

To the mothers and fathers who desire to give their children the advantages of a musical education.

Beethoven says, "Where the piano is there is the happiest home." Very few of us fully realize, yet, the actual value of a musical education to the child. Music is the food of the soul, and should be nourished during childhood. It will help them to grow up better, broader and more sympathetic men and women.

Music will beautify the character of the child, and impart grace and refinement.

Every parent should send for this "Art and the Critic" album, giving the autobiography of the musical great. It is just as necessary to know the life of Great Artists as the history of politicians.

This book will interest every child, and teach them to know the great musicians of to-day. Models of the famous Williams New Scale Piano are also shown, with Gold Autograph of Artists which is placed on these "Artists' Choice Pianos."

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

A.D.S.—Which would be better for sandy loam, to spread well rotted manure on this fall or in the spring? Would it be advisable to use fertilizer on such land in the spring? This land is level and well drained, intended for potatoes.

Answer:—I would advise putting on the manure in the spring. Be sure to store it protected from the rain and snow; otherwise you will lose a lot of the available plantfood by leaching. In order to get largest yields of best quality next spring, you will do well to add fertilizer to this soil. In tests at Fredericton, New Brunswick, last year, the Experimental Farm got an increase of 69 bushels and 33 pounds of carrots per acre by adding 650 pounds of fertilizer to the acre, alone and with 20 tons of manure alone. In the same test, the addition of fertilizer to manure returned a gain of 124 bushels and 44 pounds of turnips to the acre. Potatoes require largely the same type of fertilizers as the foregoing crops. The addition of sufficient fertilizers will undoubtedly give you good results.

H. B.:—1. What would you advise sowing on low muck land to give permanent pasture? 2. Could you give me culture directions for lentils? 3. What will rid a field of twitch grass?

Answer:—1. For low land grass for permanent pasture, I would advise you to sow a mixture of—

Red top	10 lbs.
Timothy	4 lbs.
Alsike clover ..	4 lbs.
White clover ...	2 lbs.
Total	20 lbs. per acre

If possible, provide suitable drainage. 2. Relative to culture of lentils, French advises a light and dry soil. Grow the lentils in rows about 18 inches apart, planting them 3 inches apart. The seed is planted about an inch deep on a well prepared seed-bed. Considerable care must be given to the cultivation of the crop. When the plants turn yellow, harvest the whole plant, leaving the beans in the pods. If they are threshed out, the lentils do not store as well. 3. To get rid of twitch grass or quack grass, it requires persistent acre. Various methods are recommended. Some get good results by giving the soil good preparation and then seeding it to a very heavy seeding of rape, millet or sorghum. The idea is to smother out the grass. Others get good results by summer fallowing, raking up the pieces of roots, drying and burning them, as often as the material can be gathered.

Subscriber:—1. Do you think ..... and should be plowed?

Answer:—If the land where your beans were grown last year is of a clay type, it should be plowed in the spring in preparation for a seed-bed for alfalfa. It is almost impossible to give too much care in preparation of the soil when alfalfa is to be grown. It might be of interest to you to know that on the Cornfalfa Farms, Waukesha, Wisconsin, where approximately 300 acres of alfalfa are grown on a 500-acre farm, greatest care is given to plowing, disking and harrowing the soil. Swartz Bothers, the operators, report that at seeding time they also apply from 400 to 600 pounds per acre of a fertilizer carrying 2 per cent. ammonia, 8 per cent. available phosphoric acid, and under normal conditions 2 per cent. potash. This additional available plantfood gives the young crop a vigorous start. The Swartz Brothers have been growing alfalfa for the last twenty years and have made an extensive crop of it during the last ten years. It is no uncommon thing for them to cut from six to seven tons of excellent alfalfa hay per acre.

PATENT YOUR INVENTIONS

Stanley Lignwoot — Ex-U.S. Patent Atty — Canadian Building Toronto

Horse Sense

The old horse, if given proper care and treatment will in almost every case stand as much hard work as the young animal and, considering the price of horses at the present time the old horse is worth just as much to the farmer as the young horse, as far as work is concerned.

Of course if the old horse is offered for sale he will not bring as much as the young one, because the most of his life lies in the past, however, considering everything if he be given the proper care he will pay his way and be a profitable and faithful servant to the farmer.

With many, as soon as a horse begins to grow old, say from 12 to 14 years he is neglected and does not receive the care he should have; young ..... that he ..... groomed as regularly ..... carefully as formerly. When not in use he is left to run in the pasture during all kinds of weather, and if a little crowded for stable room he is many times left out for the winter to find a place of shelter around the old straw stack, or behind a bank some place.

Many times the old horse does not receive the kinds of feed that are best for his particular case and, if the teeth are a little long and this is often the case with the old horse, he cannot grind the feed as he did a few years past. When the old horse has reached this stage he cannot masticate his food as he should be, consequently a portion of it does him no particular good.

Then again it must be remembered he will require a longer time to eat his feed than when young. Unless some ground feed is given him and he is given sufficient time to eat it when being worked, he will fail to get the full benefit of his meal, and in a matter of a very short time he will begin to lose flesh and will no longer present the fat, sleek appearance of former days.

It is obvious therefore that if the horses are to be serviceable until a good old age, they must receive as good care and treatment, if not a little better, in their declining years than when they were young. They must not be neglected whether at work or not.

The Melting of the Bells.

They have taken the bells of Flanders
And melted them into guns,
They have branded the bells of Flanders
And trained them on her sons.

The tower of Bruges is silent,
And widowed shall she stand;
No more shall the voice of Roland
Sound "Victory in the land!"

Proud Ghent and prouder Antwerp
Are silent on the Scheldt;
They have humbled the bells of Flanders—
Art sleeping, Van Arteveldt?

Now this is the condemnation
That follows them through the years,
That they shall be blind to beauty
And they shall be deaf to tears.

And through the coming ages,
When wonder and woe are theirs,
Forever the bells of Flandera
Ring louder than their prayers.

—Mary Eleanor Roberts.

Sheep Notes

If you are breeding for speed, mate long-legged males and females. Most of us would not care for that kind of sheep on our farms. We do not want fence jumpers, but quiet, yet vigorous sheep. For this, sheep with short legs and compact bodies are best.

Every year or two some one suggests that the forests be used as sheep or goat ranches. The foresters say it is impracticable. Why not use farm pastures instead?

A narrow gateway for sheep leads to a big lot of trouble.

A sheep corral is nothing less than insurance against sheep-killing dogs, which have constituted one of the greatest obstacles to sheep-raising. Sheep may be driven into the corral at night, since sheep losses usually occur at night.

Be sure there are no ticks on the sheep when they go into winter quarters.

It will cost good money to profit in lot of ticks.

A ticky flock will come out skin poor in the spring no matter how you feed.

Lambs make greater gains in feeding than old sheep. Hence it would be unwise to prohibit the slaughter of lambs.

Ewes due to lamb in the latter part of winter or early spring should be given nutritious food for toning the system, developing the young and growing a coat of wool. Nitrogenous foods, such as oats, alfalfa and bran, are valuable for that purpose.

The Tool Box in The Kitchen.

"Every well-appointed kitchen has a tool box all its own," declared one housekeeper, who says frankly that she gets more pleasure out of work done in her kitchen than that which is necessary in any other room in her house. "I am talking about housework, you understand, not about reading or studying or playing the piano or anything of that sort," she explains.

"One thing which I consider an absolutely necessary part of the kitchen paraphernalia is a tool box. Mine, which really is a deep drawer over a build-in cupboard, contains two chisels, a large one and another smaller, a funny little tool the name of which I have forgotten, but it is a wooden handle with a lot of queer little things that can be fitted into the end of it for various purposes, a saw, a large hammer and a tack hammer, a large screw driver and a small one—and there are two still smaller ones that belong to that handle full of tools that I mentioned—a monkey wrench, a pair of tweezers, a plane and a few other little things which any amateur carpenter or real one needs at various times.

"We always keep a box of nails of assorted sizes on hand, also small boxes of carpet tacks, brass-headed tacks, brads and screws of several sizes. Then, too, we keep a few coils of wire of different sizes, and we find that all of these things are wanted often enough to warrant our keeping the supply up to date."

High egg production is more a question of breeding than of breeds, of heredity than of types.

The sheep stables should have frequent cleaning. When the manure is allowed to remain too long it gives off ammonia and other foul gasses which injure the sheep.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

Cut out worrying; it helps disease to develop.

WHOOPING COUGH.

In England whooping cough—pertussis—occasions more deaths than does measles or diphtheria or scarlet fever or typhoid fever. 800 of our own children dies annually of it. Nor is this taking into account the diseases which may be complicating or sequel to pertussis—emphysema, hemorrhages into the brain, hernia, bronchopneumonia, mastoid abscess, tuberculosis.

Whooping cough is not so bad for ..... as for ..... In itself or it has led to the development of such "terminal aliments" as pneumonia. Pertussis comes oftentimes in epidemics, which vary greatly in contagiousness, intensity and mortality. The specific germ is spread, just as in diphtheria, in the secretions from the mouth and the nose that are sneezed (and thus atomized or sprayed out) coughed and spat out, or carried about in handkerchiefs, on toys, drinking cups, roller towels and the like, which people who come in contact with the patient handle. Except for the droplet infection which results from sneezing and coughing (and which is always to be obviated by the handkerchief or other cloth held before the patient's mouth and nose during these acts) pertussis is not an air-borne infection. The infection is got either directly (by contagion) in kissing and the like; or indirectly, as from toys and the like. It is a person to person infection; and the germ is not likely to live and be noxious more than several days outside a living body. He who keeps beyond speaking distance of the patient is not like to be affected. The pertussis incubation or hatching period (the time between exposure to the infection and when one shows the first symptoms) is from a week to a fortnight. If sixteen days have passed since the exposure there is no occasion to worry.

QUESTIONS AND ANSWERS.

Subnormal Temperature.

Will you kindly advise me if anything ..... for subnormal temperature of one and one-half degrees. I am 55, weigh about 160, work inside, do not drink, use very little tobacco, sleep fairly well. I had a nervous breakdown 16 years ago from overwork, worry and other causes.

Answer—Subnormal temperature may be occasional and not serious. If persistent the reason is it is due to alcoholism, melancholia, malnutrition, wasting diseases and chronic poisoning in dangerous tradesa. A persistent subnormal temperature of one and one-half degrees is a more momentous matter than the same degree the normal. You should have your family doctor give you a good overhauling. I am sending you the principles of the Hygienic Life. Leading that should help considerable. Almost all indoor workers suffer from lack of exercise.

Blood Pressure.

Do you think a blood pressure of 125 serious?

Answer—No. But it is below par, slightly. It should be about 140. The conditions your doctor mentioned (15 pounds under weight and anemia) would account for the reduced pressure. Leading the Hygienic Life should help greatly to your restoration.

A Story from Galicia.

A good story is told concerning Commander Locker-Lampson, whose handling of the British armored-car section on the Eastern front during the Austrian-German advance in Galicia called forth such warm praise.

During the height of the Russian retreat, when our allies were streaming away, eastward, one of his Tommies was overheard enquiring somewhat anxiously of another who were our rearguard.

"Those who have the worst horses, I should say," gruffly answered the man addressed, gazing with ill-concealed contempt on the fleeing Russian cavalry.

The Dairy

All other kinds of farming are more or less of a gamble, but the man who is in dairying is reasonably sure of a fair return for his labor and capital.

There is no sure way of telling what a cow is capable of except by weighing and testing the milk. There is no connection between the length of the tail and depth of the milk pail the cow will fill. Some of our best milkers have been bob-tails.

At the same time a wide space between the back ribs is a good thing to look for in buying. The main thing, however, is depth and width of rib and space between ribs and hips. This indicates capacity to store and digest food. The "milk veins" are also important.

If you want large milk yields you must have a fairly large cow. Other things being equal, a large cow will produce more, at less cost, than will a small cow.

If you killed a cow which was giving three gallons at a milking you probably would not find more than a few quarts of milk in her udder. The milk is produced while the process of milking is going on. The act of milking transforms tiny cells in the udder into the form of milk.

Every dairy farmer should test his cows and weigh their milk. He should do this for his own satisfaction. He should do it for financial reasons; a cow, proven as to capacity by test, will sell for two or three times the price of an unproven cow.

Hubbard squash and cabbage make excellent green winter feed for hens.

It is just as important to provide green feed and animal feed for hens in winter as it is to supply a milch cow with roots, silage and chop to make her milk.

Poultry

No reliance can be placed upon a fowl that is not pure in blood. There is a downward tendency in the haphazard mixture of breeds. The purebreds of to-day not only possess the strong constitution of the crossbreds, but they combine with it wonderful powers for the production of eggs and the growing of meaty carcasses, qualities that are more or less unsatisfactory in mongrels.

It was purebreds that solved the possibility of winter egg production. Mongrel hens are not found in the list of phenomenal layers, neither are they a factor in establishing poultry farms.

In fowls that are pure we have habits, abilities and characteristics practically the same. This enables us to feed and care for them more intelligently.

There is ordinarily more profit in a dozen purebreds than in fifty dunghill fowls. As a rule, mongrels are of a hardy nature; they are not inbred. The continual mixture of blood avoids any bad effects such as come from close relationship.

In purebreds we also have beauty. The uniformity of marking, color, shape and size makes them attractive.

What success would the broiler plants have if mongrels and not purebreds were employed? Uniformity of size and condition is of untold value in shipping carcasses to market; and so it is with eggs; and surely we can not expect uniformity if we use stock that will produce all sorts of sizes, colors and conditions.

"The Hardware Store of Better Values"

TWELFTH OF BRUCE

Mrs Colin McGillivray is visiting her daughter, Mrs D A Campbell in Dornoch.

Misses Lillian and Ethel Pearce visited at the home of their uncle, Mr Wm Kissack

Mrs Barnes spent the week end with her daughter Mrs Beaton.

Mr Sam Archer was down to Guelph exhibition with his fowl.

Mr Eli Barnes, jr, also took in the fair.

Mrs Alex McGillivray came out from Port Elgin to attend the funeral of the late James McArthur at Lovat and called at her old home here.

Mr Eldon McGillivray visited his home here Sunday last.

Mr and Mrs John Kissack and family are visitors at the home of his brother Mr Wm Kissack.

Mr Dougald McArthur of Port Elgin was calling on this line last week.

Dr L McKeele, who has returned from the front called on acquaintances last week.

Mr C Morrison engaged with Mr Frank Cottrell at the lake cutting wood.

The Paisley Cream Wagon made its last trip on this route last week for this season.

Children Cry
FOR FLETCHER'S
CASTORIA

WALKERTON

Mr Hank Irwin, who has moved onto the farm west of Walkerton which he purchased last Spring from Mr Wm Riley held a house warming on Friday evening last, when a large number of his town friends gathered and spent a hang-up social evening. Mr Amos Denny provided the music for the night, assisted with selections from Hank's $325 victrola. As a fun maker the event was a huge success and as a "host" Hank will stand some beating in these parts.

How fickle fortune is, and how those who are up to-day may be down tomorrow is illustrated in the death at Toronto of Wesley Black, an ex-inmate of the House of Refuge, Walkerton, and a former wealthy jeweler and pioneer watchmaker of Paisley, who in his palmy days had stacks of the filthy here, and who is said to have been the owner of race horses that used to step out and carry off first money on the surrounding tracks. A good sport he was prominent enough in his day to have caught a place in the "Who's Who" column in Bruce. Fortune deserting him, and age and want being an ill-match-ed pair, he came over the hills to the Refuge at Walkerton in 1912, and after being five years in the institution he left last month for Toronto where he passed away at the home of his sister in his 75th year. The remains were interred in the Paisley cemetery on Tuesday of last week. —Herald and Times.

Farm For Sale

100 ACRES—Lot 6 con 11, Elderslie. A good farm for either grain or stock. About 60 acres under grass, 30 acres under cultivation, and balance pasture land. Good veneered brick house, bank barn 56 by 67. Will be sold on reasonable terms. Apply to Chris Ernst, prop., or address Paisley P O.

PINKERTON

Mrs James Douglas of Hepworth spent a few days in the village while her husband Reeve Langton attended the County Council at Walkerton.

Miss Charlotte and Harry Mutrie visited in Guelph last week.

Pinkerton is to lose one of its valuable citizens in the person of Mr Alf Piddis who has severed his connection with Mr Birrell, where he has worked for some years and accepted a similar position in Chesley. The best wishes go with Mr and Mrs Piddis to their new home.

A memorial service in memory of the late Pte Henry Campbell will be held in the Presbyterian church here on Sunday at 3 30 p m.

Which Are You With?

Recently I heard a French-Canadian ask a returned soldier how he was going to vote. The public should study his answer. At the place where this question was asked there were besides the soldier and the writer, six French-Canadians, three Austrians and three Germans, all voting at this election, also four Canadian-born Germans, who I believe had their exemptions disallowed and who have appealed. The soldier seemed to know all who were present. Of the eighteen of us there these sixteen non-Britis were all enthusiastic supporters of Laurier and Bourassa. The soldier and the writer were silent. The soldier was asked "For whom are you going to vote?" He answered as follows.

"Gentlemen, I have no option, no choice, no excuse. There is only one way my conscience and manhood will permit me to vote. You people have excuses even if they are flimsy. You French-Canadians can follow your leaders. You people of enemy birth and blood can say 'We do not want to fight our relatives or our race.' But I am neither German, nor Austrian, nor am I a French Canadian. I have a young family. When they grow up I can show them that I have done my duty up to December 17th and also on December 17th. I want to tell them that on that day of crisis I voted for Unionism, Borden, Calder, Victory, Canada, Freedom, and Democracy against Clericalism, Laurier, Bourassa, Defeat, The Kaiser, Slavery, and Autocracy. In the years to come I want to be able to hold my head up, to face any man and any race.

"Even if a soldier, should I vote for Laurier and Bourassa how could I hold my head up? A vote for them is a vote to desert my comrades still at the front. If I did that when the soldier boys come home again I would be running around like a yellow cur, ashamed to greet them.

Stray Sow

CAME on the premises of the undersigned, lot 31, con 1, Bruce Tp, on Dec 6th, one sow. The owner is requested to prove property, pay expenses and remove the animal. JOHN MAURER, Paisley P O, R R No 2.

Pig Lost

STRAYED from lot 1, con 20, Greenock, on or Nov 25th, one black Berkshire sow with some white on head, to farrow. Any information as to the animal will be gratefully received. GEO JACKSON, Paisley, R R No 2.

And when people come to Our Land I want to look in the face any decent Britisher, American, Australian, son of France, or even any Roumanian, Serb, Greek, Dago, Jap, Chink, nigger, or Indian, should Bourassa and Laurier win they will encourage foreign immigrants to they have always done in preference to British and American (say Westerners will tell you all about this) and their increasing friends.

"The Huns sneer at the Canadians for a bunch of quitters. I want to be able to say to them 'I am not one of the quitters.' Neighbors, but not my fellow citizens (I cannot recognize you as such) I know that I can say nothing that will influence you because your selfishness, bigotry, and short-sighted ness is beyond any influence but that of personal gain and ease and comfort, but if you ever have to submit to the Kaiser's yoke, blame yourselves and those like you, blame your present leaders and those like them, but do not blame your defenders. And if this Canada of ours remains a free country give the men and women who kept it free by their blood, by their treasure, by their sacrifices, by their votes, and by their sadness and suffering the credit that they so richly deserve. Do not try to put a mark against their record by claiming that you people helped.

"I have fought against the Hun, against the Kaiser. If I voted for Laurier and Bourassa I would be supporting the Ruler, the System, the Race against whom I fought in defence of the Freedom not of France or Britain but of Mankind. I would be helping those who wounded me.

"Right here you can muster sixteen votes against one two, but as I can muster fifteen loyal Canadian womens' votes against you without asking this other gentlemen if he has any but his own vote we have at least one of a majority against you. As I know you have no women voting so you can not bully me by your talk of Laurier support. But our majority should be seventeen instead of one, because there is not one of you morally entitled to a vote in Canada, because not one of you is willing to do anything for the defence of Canada."

Receiving no answer except my "I'm with you," although he waited for a few moments, we both walked, out.

Canadians, which are you with? The ignorant France Indian, clerical controlled minions of Quebec, and the allies enemy within our land, or with our defenders and their wives and families? And you have to make your choice on the 17th. There will be no second choice.

Deputy Returning Officers

Those appointed for the various polls in Paisley and vicinity for the elections on Dec 17th are: No 1 Paisley, H B Putnam; No 2, N P Boyle; Elderslie—No 1, John A McDonald, No 2 John Richardson, No 3 Wm Druickshanks, No 4 R Daniels: Greenock—No 6, Wm Dryden.

Captured Jerusalem

—The world is changing. The city of Jerusalem has been captured by the British forces from the Turks, who surrendered. This makes the end, with no brief interlude, of more than 1,300 years possession of the seat of Christian religion by the Mohammedans. For 673 years the Holy City has been in undisputed ownership of the Turks, the last Christian ruler of Jerusalem being the German Emperor, Frederick II, whose short-lived dominion lasted from 1229 to 1244.

THE BOYS AND GIRLS

Who have been working so strenuously on and canvassing hard for Dixie - a thing and those others should be given the opportunity of improving their education during the bleak winter months, at the

NORTHERN Business College

The fees are no higher than when first produce sold for half the price of to-day. The poorer people will be benefited through out life from the training in business obtained in a few months of our practical business course. Winter term begins Jan 2nd.

CARD OF THANKS

Walkerton, Dec 18th, 1917

I wish to express my thanks to the electors of South Bruce who supported me in the election just closed, and also to publicly acknowledge my appreciation of the promises services requested me by the numerous workers in my behalf during the election campaign.

While the result appears adverse at the present time, there is still a ray of hope in the result of the soldiers' vote. In any event we have the satisfaction of knowing that our cause has prospered throughout the Dominion beyond even our most hopeful calculations.

Again thanking you and wishing you the compliments of the season, I am,

Yours sincerely,
A E McNAB, Unionist candidate South Bruce

—Mrs F C Ryan went to Bradford on Monday.

—Mrs Stouffer, of Walkerton, is visiting Miss Brown at Lockerby.

—Mr Fred Hyde, of Hermiston, Alta., is down on a winter visit to his mother at Aberdour and other friends.

—Mr and Mrs John Clarke, of Tara, are occupying their house on the farm on Con A, Elderslie for the winter.

—Mr John Hammond, of Elderslie, brought in eight pigs on Tuesday for which he received $321 50.

—Mr A Lewis, of Walkerton, represented Gunns, Limited, of Chicago and Toronto at the funeral of the late Alex D Mc Intyre on Monday.

—Mrs Mackay of Thornbury and Miss Nellie Grant of New York city arrived this week on account of the illness of their father, Mr Geo Grant.

—Mr and Mrs W B Bean, of Weyburn, Sask., are down on a visit to Ontario for a couple of months, and are visiting friends in Bruce Township.

—Mrs Wawrer, of Wiarton, was down a few days visiting her father, Mr W. C. Anstead, who is in very poor health at present. Mrs W A Anstead, of Peabody, is also a visitor.

—Something to claim women's attention for a few days is the Silver Thimble and Trinket Box Fund, asking every woman to look through her possessions for discarded gold, silver, brass or lead. These articles will be melted down and the proceeds used for Y M C A work. Fuller particulars will be given later.

—The Women's Patriotic League realized a good evening's proceeds from handling the election returns on Monday evening. The net receipts amounted to over $40 for door receipts and sale of lunch and as the county council supplements all such receipts by an equivalent grant, the total realized for Red Cross is $80 to $85.

—Mr and Mrs Alexander Sutherland of Bradford, announces the engagement of their daughter Jessie Louise, to Cadet Leslie Lee Howard, of the Imperial Flying Corps, son of the late Mr John C and Mrs Howard, of Louisville, Kentucky, and grandson of the late General Lee of Virginia. The marriage will take place quietly in Old St Andrew's church, Toronto, on Dec, 22nd.

—The Red Cross workers of No 15 Bruce during the past year have shipped 731 pairs of socks, 183 flannel shirts, 164 suits of pyjamas, 41 feather pillows, 82 pillow slips. Since April all yarn has been received from Mrs McPherson, Pres. of Ont. Sock Fund, Toronto, and the socks shipped to her. These workers are also sending a box of chickens this week to the Children's Aid Society, Toronto.

Campaign Meetings

Only one public meeting was held in Paisley by each party in the election campaign. On Thursday night Mr Truax appeared before the electors, supported by Messrs P H McKenzie, ex-M P, of Lucknow, and Mr G K Cameron, K C, of Goderich. On the following evening Mr McNab held forth in company with Major McNamara, a former Southampton boy, Lieut Elliott, a returned soldier, who formerly lived in Chesley, and Rev C W Cosens, of Walkerton.

AMERICAN PLAN

JOHN J. HERNAN, Manager

Love and Riches

By Frances Elizabeth Lanyon.

(Copyright, by W. G. Chapman.)

"This way, Burton."

Verne Burton flushed at the peremptory and uncivil call. He had never liked the arrogant office manager, less than ever just now, as that conceited individual hailed him as though he were an office boy.

It was prudence and policy, however, to submit to the insolent exactions of the lordly boss of the office. Burton reached the desk of his superior to be greeted with a cold censuring look.

"Somebody to see you in the outer office," snapped out the manager. "Be brief. We can't indulge these calls taking up the time of our employes."

Burton fancies the implication did not apply in his case. He had been under the domination of this slave driver for a year, held down to a mere pittance of a salary, partly, he decided, because the manager did not like him. Burton could not remember having had a visitor in business hours since he had come with the house. He wondered who the present one could be.

The manager sat scowling, ready to give Burton a genuine dressing down when he reappeared, for Burton had been gone nearly a half an hour. The tyro was primed for a tirade before the whole office. Burton anticipated him.

"I am sorry to give such short notice," he spoke, "but important business has come up that calls me at once from the city and I shall have to resign my position."

"Business—resign?" mumbled the manager.

"Yes, sir. I have fallen heir to a fortune of fifty thousand dollars."

The manager was stupefied. Then his false nature came to the front with a specious mask.

"Heir-fortune. Ah!" he smirked, extending his hand, "allow me to congratulate you."

"I must be at the office of the lawyer who just called upon me in half an hour," explained Burton.

"Certainly. So sorry to lose your valuable services," fawned the politic knave. "By the way, I will phone my chauffeur and you can use the machine."

"Thanks, no," replied Burton. "The lawyer's office is only a square distant," and ten minutes later as he got clear of the office he took a long deep breath, like a captive at last released from the fetid prison place.

Burton was in a dream all the rest of that day. A strange thing had transpired. A lawyer had indeed informed him that he was heir to a large fortune. The legator was Phineas Dodd. Burton had never seen him, but knew that his mother was a cousin of a man of that name. The lawyer stated that the pretentious home of Mr. Dodd at Wildemere was ready to receive him as its master, with a generous bank account and stocks and bonds and some other property holdings.

"The nearest of kin to your mother's cousin is a Mrs. Eunice Blake and her daughter, Eugenia," explained the lawyer. "The latter is a self-willed, independent piece of femininity, handsome as a picture, but too proud to put up with the occasional irritability of her uncle. He disowned them, favored you and there you are."

Burton decided to go down and look over his property. He was provided with a letter of introduction to the keeper and a check book. Burton had never been in Wildemere before. He did not make his identity known to anybody and after locating the direction of the Dodd mansion through inquiry, started on a leisurely walk in its direction.

"I have strayed from the right road," he soliloquized, as he found himself finally out of sight of various landmarks described to him. "Ah, there is someone."

It was a young girl of about eighteen, simply but charmingly dressed, coming his way carrying a basket filled with wild flowers. The freshness and glory of the woods seemed reflected in her face. She halted as Burton lifted his hat courteously and explained what he was looking for.

"We Can't Indulge These Calls Taking Up the Time of Our Employes."

She offered to put him on the right road and they walked on together. He asked her several questions about the town, the neighborhood, the Dodd place. She answered him promptly and intelligently. He led the conversation to the heir of the estate.

She did not know him, she informed Burton. He referred to the possible disappointment of the nearest of kin to old Phineas Dodd. Did she know her?

Oh, yes, Burton had heard that Miss Eugenia Blake had a very independent spirit. Quite so—and that she was handsome? His companion avoided his glance and said nothing. By this time they had come in sight of the mansion and the girl went her way, but the memory of her charming ingenuousness remained with Burton.

He was met at the Dodd mansion by the keeper, an aldish, weazen-faced old man, who showed him over the house and attended to his needs during the ensuing two days. Twice, rambling over the surrounding country, Burton came across the young lady he had met the day of his arrival. They became quite friendly and he made up his mind that when he came to settle permanently in the old home he would know more of her.

Then came a vast surprise the afternoon that Burton had arranged to return to the city. The keeper came to him, a crafty expression on his face.

"I've got something to sell to you before you leave here," he observed.

"Indeed?"

"Yes, I want a thousand dollars for it. A week ago I discovered something in the desk of my old employer that the lawyer had overlooked. I am sure you will realize its value when I tell you that it is the latest will of Mr. Dodd, and leaves the property to Miss Blake, as he originally intended."

For a moment Burton was stunned. Then his true nature came out. The crafty bargainer produced the document in question, with the threat that he would go with it to Miss Blake if the bribe was not paid.

Calmly Burton wrote out a check for the amount demanded. He returned to the city, sought out the lawyer, recited the whole transaction, gave up the new will and—his brief dream of wealth was over!

Burton did not go back to his old work. He secured employment with a new firm. About all he allowed to remain in his mind concerning his temporary and inglorious career as an heir, was a memory of the sweet face of the girl he had met at Wildemere.

One day the lawyer sent for him.

"Mr. Burton," he said bluntly, "Miss Blake has refused to inherit under the new will you discovered unless you receive one-half of the estate."

"Nonsense!" spoke Burton definitely. "I haven't the vestige of a claim to a penny of it."

"She thinks differently. I told you once what a headstrong, independent young lady she was. She is in the adjoining room and wishes to see you. Let me remark incidentally," and there was a gentle glow in the eyes of the advocate, "that your noble action in regard to the will has won her profoundest admiration."

Burton stood rooted with amazement as he recognized in the heiress the nameless young lady of his dreams.

"I cannot consent to accept that to which I have no legal or moral right," he said, when they finally became engaged in general conversation.

"Then I can destroy the will," was the positive rejoinder. "Mr. Burton, you are a man among a million and you must share this fortune with me."

And then her eyes fell, for his, full of ardor, were gazing longingly into her own, and in their depths she read the love she knew she could return.

DOMESTIC SCIENCE AT HOME

Twenty-First Lesson—Milk and Its Derivatives.

Milk may be called a perfect food, containing as it does the five necessary food elements required by the body to maintain life. It is the first food for infants; it forms also a perfect food for small children, the protein being in the form of casein, which is readily digested. The adult requires additional food, owing to the activities. Milk will not supply all the needed elements. The carbohydrates are in the form of milk sugar and fat; the fat is suspended in the milk in the form of tiny globules, thus giving to the milk its clear, white color. The proportions of fat in the milk vary from 2.8 to 6 per cent. This variation is due to age, condition and feeding of the cows.

Cream.

When a milk taken directly from the cow is placed in suitable containers and permitted to stand for a period of time, the fat globules, which are lighter than the water of the milk, will rise to the top and form a coating over the entire surface of the milk. This is called cream. Cream is a wholesome, palatable form of fat. Modern methods now use a machine for separating cream by gravity from the milk; this eliminates the period of time for standing to permit cream to rise to the top of the milk. The derivations or by-products of milk are butter and cheese.

Butter.

Cream is permitted to stand a certain length of time to develop an acid ferment. The object of this is to give the butter a desirable flavor and aroma, or this ferment may be added to the cream in the form of lactic acid. The cream is then churned, the butter-milk drained off and the butter worked with pure, cold water. Salt is added to the butter to preserve and improve the flavor. Butter contains about 83 per cent. fat and is a valuable food for energy.

Sweet butter is made from fresh cream and is usually sold unsalted. It will not keep any length of time, usually turning cheesy.

Cheese.

Cheese is made from milk by special process of fermenting milk with a lactic acid ferment and then coagulated with rennet. This cheese when used fresh is called cream and cottage cheese.

Many other varieties are made by special processes which, together with the location, curing and manner of storing, give many varieties. Cheese is a valuable food, containing a large amount of protein in the form of casein. It is a concentrated food, and when properly combined with other foods furnishes an economics nutritive diet.

The by-product of butter is buttermilk, which is greatly esteemed in Europe. Many of the foreign race contend that the use of buttermilk prolongs life by neutralizing the bacteria of the intestines. Buttermilk is also strained, the curd salted and beaten with a wooden spoon, then worked into a smooth mass. This is called buttermilk cheese and was greatly esteemed by our grandmothers.

To Make Butter at Home.

Collect left-over portions of cream in a clean bowl. Permit it to stand for three or four days in a cool room. Now place one cupful of this cream in a one-quart Mason fruit jar. Add one cupful of warm water, testing the cream and water with a thermometer. It should be sixty-five degrees Fahrenheit. Place rubber lid on jar. Shake continuously for a few moments, and you will feel the contents of the jar become lumpy.

Drain off the buttermilk and place the butter in a bowl of clear, cold water. Add one-fourth teaspoonful of salt and work, changing the water until it shows no trace of milk. Form the butter in pats and place in refrigerator to cool. Care must be taken not to scald the cream by using water that is too hot. A few drops of carrot juice may be added to give the butter a color. Grate a small carrot and place in cheese cloth and wring to obtain the juice. This butter may be given to small children or to invalids.

Let the buttermilk stand a few hours and drain off the water that has risen to the top. Then place a piece of cheese cloth in strainer, turn in the buttermilk and let drain for two hours. Now place the curd in a bowl and add:

One-fourth teaspoonful of salt.

Work well with wooden spoon to a smooth mass.

One-half green or red pepper, chopped very fine.

Mold into balls, and place a piece of nut on the top and serve on lettuce.

Sour milk may be used in place of buttermilk.

USING THE CHEAPER CUTS OF MEAT.

Cheap cuts of meat—that is to say, the tougher or less choice cuts—can be made acceptable to fastidious palates by thorough and careful cooking. Here are suggestions that lend variety to the ways in which beef, ham and chicken may be served at the one meal a day to which we have patriotically reduced our meat-eating.

Broiled Flank Steak.

1 flank steak, salt, pepper, 1 teaspoonful butter. Buy a flank steak the size required for your family needs. Ask the butcher to score it on each side or, if you do this yourself, use a sharp knife and score diagonally across the meat, in lines one inch apart; turn meat and score in opposite direction, making small diamonds. Score both sides. The scoring cuts across the tough fibres and makes the meat tender like sirloin. Heat a frying pan red hot, drop in the steak, turn quickly back and forth to sear the whole surface and then reduce the heat and cook more slowly. Turn steak frequently to cook evenly. A flank steak will cook in ten to twelve minutes. Season with salt and pepper, remove to a hot platter, spread with butter and serve.

Round Steak in Casserole

1 round steak cut 1½ inches thick, 1 cupful flour, 1¼ teaspoonfuls salt, pepper, 1 tablespoonful butter. Pound the flour, a little at a time, into both sides of the steak, using a meat hammer for the purpose or a potato masher or even a large heavy spoon. Heat a frying pan and brown the meat on both sides, then put into a baking pan. Rinse the frying pan with boiling water so as to save all the browned meat juice and pour this water over the steak, using enough to come up halfway. Add seasoning and cover. Bake until tender. This is a very economical dish and there is no waste.

Curried Brisket with Rice Border

2 Pounds brisket, 2 cupfuls onions cut fine 2 teaspoonfuls salt, 2 tablespoonfuls flour 2 teaspoonfuls curry powder, 1 tablespoonful chopped celery. Wipe the meat and cut into narrow strips. Sear both sides in a hot frying pan, then put the meat into a large stew kettle and cover with boiling water. Brown the onions in the pan where the meat was seared, add them to the meat. Season and simmer three hours or until tender. Mix flour and curry powder with a little cold water, add to the meat, add also the celery cut fine. Boil ten to fifteen minutes. When the celery is tender, turn all on a platter, surround with a border of rice and serve.

Baked Meat Hash.

Medium white sauce, hot mashed potato, left overs of meat. Put meat through a food chopper, first removing all gristle and bone. Season highly with salt and pepper. Butter an earthenware baking dish. Add enough medium white sauce to the ground meat to moisten and bind it together. Turn into the baking dish, spread over in a layer, the hot well-seasoned, mashed potato. Bake in a hot oven until brown.

Jellied Ham

2 tablespoonfuls butter, 2 tablespoonfuls flour, ¼ teaspoonful salt, 1 cupful chicken stock, 4 tablespoonfuls cream, 1 teaspoonful granulated gelatine ¼ cupful cold water, 1½ cupfuls cold boiled ham. Make a white sauce of the butter, flour and stock. Add the salt and pepper. Soften the gelatine in the cold water and add to the white sauce, add the cream and the finely chopped ham. Turn into a shallow pan, pack solid and let chill.

◆

Troops Defy Tropic Heat.

Recent experiments by the British government in India with ultra-violet rays, says the Electrical Experimenter, are interesting not only to army men but to scientists. In the experiments an under-officer of the English army was completely clothed in garments which had been previously treated to withstand the ultra-violet rays. It was found that he was able to stay in the sun of midsummer for hours without feeling disturbance or inconvenience in any way. Upon this and other experiments the English government has adopted this method for the protection of its Indian troops against the ravages of tropical sunlight.

The quality of mercy is not strain'd;
It droppeth as the gentle rain from heaven
Upon the place beneath: it is twice blest;
It blesseth him that gives and him that takes;
'Tis mightiest in the mightiest.
—Shakespeare.

Old Tea Looks All Right

Old tea and fresh tea, poor tea and good tea, all look alike. No wonder a woman often gets a bulk tea she doesn't like.

Red Rose Tea in the sealed package is always fresh, always good, always worth the price on the label.

Kept Good by the Sealed Package

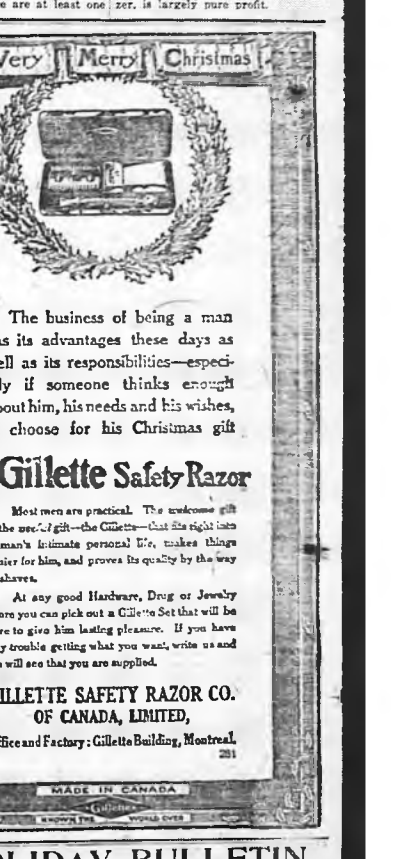
MUSIC IN THE HOME

Music A Profession For The Blind.



In the animal kingdom it is observed that no creatures are favorites, but a certain compensation balances every gift, and every defect. That is a truth expounded in his Essay on Compensation in which Emerson puts it down for a fact that for everything one has missed he has gained something else. When Nature deprives a person of the sense of sight, it is an immeasurable loss, yet that same Nature, once thought cruel, now beneficent, makes up the deficiency by an extraordinary endowment along some other line.

So often it is that finest of compensations, the talent for music. There is no doubt that music is one of the most suitable professions for the blind. In a Government report recently issued in Britain on the welfare of the blind it is stated that there are almost 1000—947 to be exact—persons in the United Kingdom thus afflicted who are following the professions of music, making of musical instruments, piano tuning, etc. There are at least one hundred blind organists in Britain, many of whom are choir masters as well. It is expected that these numbers will be materially increased owing to the fact that a greater amount of attention is now being given to music in the institutions for the blind.

The aforesaid report shows from an investigation among several hundred persons that 86 per cent. of the men and 81 per cent. of the women are known to have been successful in their musical occupations. This report suggests the desirability for a blind person to combine the position of organist, or music teacher, or professional singer as the case may be with that of pianoforte tuning, so that in the event of a falling off in his professional work he can resort to the more practical occupation, or the other way around, as circumstances dictate.

A HOLIDAY BULLETIN

THE SEASON'S BEST FICTION

LONG LIVE THE KING - $1.50
By Mary Roberts Rinehart.
"Will prove the greatest of Mrs. Rinehart's successes."—New York Times.

THE INDIAN DRUM - $1.25
By William McLeod and Edwin Balmer
A mystery of the Great Lakes "—good it not better than "The Blind Man's Eyes."

THE HEART OF HIS, or Those "The Waits and Wonder" - $1.25
By Nellie L. McClung.
This book reflects public feeling in typical towns and country districts throughout Canada, and shows with telling effect how Canadian men and women are doing their bit in the war. The whole book is strong and fearless, but always comforting and healing.

THE ROAD TO UNDERSTANDING - $1.40
By Eleanor H. Porter.
A delightful love story, by the author of "Just David."

SKINNER'S DART - $1.25
By Mary Irving Hodge.
Even more amusing than "Skinner's Dress Suit."

A NEVERMELTS SANTA CLAUS - $1.00
By Meredith Nicholson.
A Christmas story of mysterious surprises and a joyful holiday spirit, by the author of "The House of a Thousand Candles."

POLLY AND THE PRINCESS. $1.35
By Emma C. Dowd.
All lovers of "Polly of the Hospital Staff" and "Polly of Lady Cleg Cottage" will want to read this new story by the same author.

THE TRIFLERS - $1.40 Net
By Frederick Orin Bartlett
How a charming heiress attempts to escape a horde of suitors by a marriage of convenience.

TWO BIG WAR STORIES

CHUMPS, The Plain Tale of a Canadian Who Went - $1.25 Net
By Louis Keon, C.B.F.
A vivid and graphic account of one of the First Contingent. Illustrated by the author.

KITCHENER'S MOB - - - 75c.
By James Norman Hall.
A new edition of this famous tribute to Kitchener's Army. One of the best books of the war.

Toronto THOS. ALLEN Publisher

How The Woodchuck Chucked Wood.

One morning old Mr. Woodchuck stepped out early to take a look at the sky.

"It's burrowing weather," he said to his wife when he came in and sat down at the breakfast table.

"I'm glad I've finished the quilts and the children's underclothes," returned Mrs. Woodchuck, as she gave Milly another dish of porridge. "Use your spoon, Willy. And, Lilly, don't giggle into your plate like that."

"Is the vegetable cellar full?" asked old Mr. Woodchuck, passing his cup for more coffee.

"There's some space left by the wood bin," said his wife.

"I'll have another load of roots put in to-day," said old Mr. Woodchuck. "To-morrow we'll have a storm. I feel it in my whiskers."

"After breakfast, Willy," said Mrs. Woodchuck, "you must bring in the wood."

"Hasn't he done that yet?" asked his father.

"School wasn't out till the other day!" mumbled Willy Woodchuck.

"A week ago," said old Mr. Woodchuck sternly. "You must get in that wood to-day."

"Yes, sir," said Willy Woodchuck.

After breakfast Willy Woodchuck went out to the woodpile. Such a big woodpile! But of course if you leave a week's work to be done in a day, that is not the fault of the woodpile.

Willy Woodchuck took up two or three chunks and chucked them through the cellar window. One of the chunks hurt his paw. Perhaps he had a splinter!

He sat down on a stump to look at his paw. He took his knife out of his pocket.

"What are you doing?" asked Sammy Skunk.

Now, Willy Woodchuck's mother had told him never to play with Sammy Skunk, because Sammy Skunk's manners are bad. Willy Woodchuck remembered at once.

"Nothing," he said.

"That's a fine knife," said Sammy Skunk

Willy Woodchuck opened his paw so Sammy Skunk could see.

"My!" cried Sammy Skunk. "Ain't it a hum-dinger!"

Sammy Skunk's words, you see, were no more elegant than his manners.

"I bet you could cut a whistle with that," said Sammy Skunk.

A whistle would be fine to play with during the winter. Willy Woodchuck forgot Sammy Skunk's bad manners.

"Can you cut one?" he asked.

"Sure," said Sammy Skunk. "Give me the knife."

But as soon as the knife was in his paw, Sammy Skunk laughed and ran away.

"Here, that's my knife!" cried Willy Woodchuck, running after him.

"Do you want to fight?" Sammy Skunk asked threateningly, as he stopped.

Willy Woodchuck decided that it would not be pleasant to fight Sammy Skunk. So he went back to the woodpile again.

He took up two or three chunks and chucked them through the cellar window. Then he stumbled over a forked stick. It was a perfect fork for a sling shot. And he had a piece of rubber right in his pocket!

He sat down on the stump to fasten the rubber to the forked twig.

"What are you doing?" asked Franky Ferret.

Now, Willy Woodchuck's mother had told him never to play with Franky Ferret, because Franky Ferret's temper is bad. Willy Woodchuck remembered at once.

"Nothing," he said.

"That's a fine sling shot you're making," said Franky Ferret.

Willy Woodchuck opened his paw so Franky Ferret could see.

"My!" said Franky Ferret. "Ain't it a whing-whanger!"

Franky Ferret's words, you see, were no better than his temper.

"You could hit most anything with that," said Franky Ferret. "Let's go hunting."

It would be fun to try the new sling shot! Willy Woodchuck forgot Franky Ferret's bad temper.

"Come on," said Franky Ferret, and away they went.

"Oh, look!" Franky Ferret whispered. "There's Roly-Poly Rabbit. Hit him!"

"Oh, no!" said Willy Woodchuck. "I do not want to hit Roly-Poly Rabbit!"

"He'll get away," said Franky Ferret. "Quick!" And he snatched the sling shot.

"Run, Roly-Poly!" cried Willy Woodchuck shrilly.

Roly-Poly Rabbit did not wait to learn why. He just scuttled as hard as he could into his hole.

"What did you do that for?" Franky Ferret asked threateningly.

And he hit Willy Woodchuck hard, and put the sling shot into his pocket, and ran away.

Willy Woodchuck felt so hurt that he cried all the way back to the woodpile. It was a long way, and by the time he had chucked two or three more chunks through the cellar window Milly and Lilly came out to find him.

"Here's your luncheon," they told him. "Mother's too busy to get dinner."

Milly and Lilly went back into the house, and Willy Woodchuck sat down to eat his luncheon. It was a fine big turnip-and-beet sandwich. My, but it looked good! But just as Willy Woodchuck was biting the first bite—

"What are you doing?" asked Charley Crow.

Now, Willy Woodchuck's mother had told him never to play with Charley Crow, because Charley Crow's conduct is bad. Willy Woodchuck remembered at once.

"Nothing," he said.

"That's a fine sandwich you're eating," said Charley Crow."

Willy Woodchuck opened his paw so Charley Crow could see.

"My eyes!" said Charley Crow. "Ain't it a jim-hummer!"

Charley Crow's words, you see, were no more refined than his conduct.

"I bet you could do anything with a lunch like that," said Charley Crow. "You could even fly."

Flying had always seemed wonderful to Willy Woodchuck. He forgot Charley Crow's bad conduct.

"It is hard!" he asked.

"I should say not!" Charley Crow came down from the branch where he was sitting. "Why, I learned just as easy! All you do is to stand on this stump—put down the sandwich and shut your eyes. Ready?"

"Yes," said Willy Woodchuck breathlessly.

"That's all," said Charley Crow, laughing.

And away he flew, and took the sandwich with him.

Willy Woodchuck sat on the stump, thinking about his knife and his sling shot and his sandwich. Most of all he thought about the sandwich. And he thought what bad boys Sammy Skunk and Franky Ferret and Charley Crow were—

"Willy Woodchuck!" said his father sternly.

Willy Woodchuck thought then about another bad boy. He fell to chucking wood in earnest. If only he had not played with Sammy Skunk and Franky Ferret and Charley Crow! He chucked and he chucked. The woodpile was very big; but that was not the fault of the woodpile.

The day passed, and the dark came down. Willy Woodchuck kept right on chucking wood. It would never do to let the winter catch him. He chucked and he chucked. It was such a big woodpile! But at last, long after dark, the last piece went through the window and his work was done.

And that is how Willy Woodchuck learned a very useful lesson.

FROST STOPS THE INSECTS.

They Experience Suspended Animation in Cold Weather.

With the coming of the frosts the insects are silenced, and as long as the temperature holds below 50 degrees Fahrenheit they are rendered also inactive. Above that the hardier beetles and grasshoppers, along with a few spiders, are moving about, and when the sunshine warms the air more and more certain moths and butterflies and two-winged flies, including the gnats, are on the wing.

Some species of insects feel the effects of cold far less than others, and this does not seem to be influenced by sturdy bodies, hairy coverings or the situations in which they are found. The gnats are among the most fragile species, but they and the slim-bodied water striders are found active later in the autumn and earlier in the spring than any other creatures, excepting perhaps the mourning-cloak butterfly and the wasps, all of these creatures responding to the sunshine on the warmer, thawing days by winter. The black ground beetles also are quickly resuscitated by slightly warmer airs.

This proves the fact that most insects are not normally killed by cold but merely experience suspended animation, and are ready to resume their activity after any length of time.

Cutting a Lake Ship in Two.

At the yards of the American Shipbuilding Company at Cleveland, Ohio, lake carriers are being cut in two to permit their passage through the short locks of the Welland Canal on the way to the Atlantic for ocean service. The ships are placed in dry dock and cut in two sections with acetylene gas torches. The sections are boarded and caulked, after which the dock is flooded and the sections gulled apart. They are then towed through the Welland Canal and the locks of the St. Lawrence River to Montreal, where they are rejoined temporarily. The ship is then taken to an Atlantic port shipyard, where it is refitted and made seaworthy for ocean service.

Broilers shrink about half a pound in weight when dressed.

GENEROUS FEES.

How a Native Chief Expressed His Gratitude to a Missionary.

Old-time dentistry was primitive, painful and peculiar. Some of the methods of our ancestors provoke a ready smile in this modern era, a safe century or so removed from the possibility of experiencing them; they are even consolatory, by contrast, for the necessity of a less degree of present endurance. Quite as amusing as ancient methods among our civilized forbears are the occasional results when modern methods are applied among uncivilized or alien people today.

It was Lord Cromer that first told the story of how the Khedive of Egypt tested laughing gas on two of his followers before he would intrust himself to a European dentist, and how he expressed his thankfulness when the aching tooth had been extracted by giving the dentist five thousand dollars.

A fee equally generous, considering the donor's resources, but distinctly more embarrassing to the recipient, was once offered a missionary who had come to the relief of a native chief who was suffering agonies from persistent toothache. The missionary was neither doctor nor dentist, but a few instruments, including a powerful forceps, were included in his outfit. He did not promise that the operation would be painless, for he had no suitable anaesthetic, but he believed it would be successful even if several previous attempts by native means had broken off the tooth close to the gum. The chief had courage, but he was tired of being tortured for nothing, and he insisted on seeing the strange instrument used on some one else first. Two or three slaves were summoned, but the missionary stoutly refused to remove any of their strong, white and perfectly sound teeth to please their master.

The chief was puzzled and angered by the refusal, and things began to look threatening indeed, when the missionary's wife stepped into the breach. She had a hollow tooth, which could have been filled had they been in a civilized country, but which she was willing to part with since they were not. In the presence of an interested assembly, comprising the entire village, with the chief in a seat of honor in the front row, her husband extracted it. Then—with a desperate grip and an appalling wrench—he extracted that of the chief, who emitted a hair-raising yell, but who was so grateful that he insisted on bettering the gift that he had promised—although the amateur dentist claimed no fee—and presented the missionary with two brand-new, smiling black wives!

It was with the utmost difficulty that the missionary, with the tactful but resolute assistance of Mrs. Missionary, succeeded in declining the ladies without offense and maintaining his preference for a goat.

LIQUID FIRE.

Most Famous of Ancient Warfare Used "Greek Fire."

Much mystery still attends speculation about the exact nature of the famous "Greek fire" that wrought such panic among the enemies of the most famous of ancient warriors. It is narrated that it travelled over the ground "with the urge and direction of the wind, consuming everything before it. Trees and grass and enemy legions withered and shriveled before it." According to one chronicler who had a lapse of several centuries to render him immune from authoritative contradiction, "even the rocks of the hills melted in its flame."

In all likelihood the rocks of the hills did nothing of the kind. Science has not yet invented anything that will so literally emulate the action of molten lava from an active volcano. But the Greek fire was a wonderful thing, chemically, no doubt, and in its own day a very formidable device indeed.

It has been whispered about from time to time that a new invention has made war "intolerably awful." Pacifists used to argue quite seriously that modern ingenuity had already made war impossible; that all elaborate preparations were really—to borrow a term then unheard of—"camouflage" to maintain commercial prestige, and that war would be self-destructive through its very violence. But the Germans have utilized everything known to them and the allies have been forced to follow their example. Yet war goes on.

Silver Redemption.

Ten years ago as a medium of exchange and a standard of values gold seemed to have utterly eclipsed its pale competitor. To-day silver is regaining much of its old prestige. It has risen in value relatively higher than gold. Bullion silver is worth more than the face value of silver coins. At the beginning of the war American silver dollars were worth 53 cents in gold. To-day they are worth just a fraction over 100 cents, or their true face value. Silver coinage is on the increase everywhere, and in India and Russia, where the face value is less than the bullion value, the coins are being remelted by their owners and sold back to the mints as coinage bars.

Hearts of Oak.

The Germans are reported to use acorns for bread. Perhaps in the hope of developing hearts of oak.

DEEDS OF GLORY ON BATTLEFIELDS

THE UNCONQUERABLE SPIRIT OF BRITONS.

Self is Forgotten and Cause and Comrades Take First Place in Gallant Hearts.

No proof is needed of the valor of the Belgians, the French and the British. It would be idle to speak of it, because for three years they have shown the height of human courage in most damnable and deadly places. The self-sacrifice and heroic deeds of ancient days which have come down to us as legends lack significance when compared with daily deeds performed in this war, says Captain David Fallon, M.C., late of the British and Australian armies.

I have heard of nothing finer than the heroic defence of the Belgians at Liege. Although totally unprepared, they resisted for ten days a great, disciplined force forty times their number; or the impossible landing at Gallipoli made by the Anzacs; or the defence at Verdun by the French; or the Canadian charge through poison gases at Ypres; or the brilliant British attack on the Somme.

If the love of a man who gave his life for a friend could not be surpassed, how could the spirit of a man be described who died for a perfect stranger? The war has brought thousands of such deeds to the front, and it is an every minute action when one man will attempt to save the life of his comrade, knowing that in the attempt there is a possible chance of losing his own life.

His Life For Another.

During the early part of the Somme attack we were ordered to take three lines of trenches and consolidate them against the usual counter-attack. We gained our objectives after attacking under an avalanche of shell fire, gas and burning oil. The impetuous ones ran beyond the third line of Boche trenches and were cut off. One of my men who had gone ahead was badly wounded and was lying crippled at the feet of the enemy wire.

No matter how seriously a man is wounded he will never be heard to moan. That is the spirit of the troops to-day. The man in question must have been frightfully hurt for we in our trenches could hear him softly moaning in great agony. Two of my men tried to get him out of the wire and bring him back into our new position. But they lost their lives in the attempt. The third man who went out crawled along on his stomach and eventually reached the wounded man. It was no good of him standing and lifting the wounded man, because the drum fire of the Hun machine guns was sweeping No Man's Land. So he just lay on his back and hooked his feet under the armpits of his wounded comrade, and inch by inch brought him back into our wire. I ordered some men to bring him in and in applying first aid I found that the wounded man had half his face blown away and his right arm and right leg had been smashed to a pulp. The rescuer was so badly wounded he did not live to enjoy the reward I recommended him for.

A Marvellous Record.

On one occasion we were advancing with our own barrage when one of my comrades single handed attacked a machine gun emplacement after several men had been killed in attempting to take it. He bayoneted one of the machine gun crew and brought in another, together with the captured gun. Although wounded, he then led a bombing party to the assault of a defended house and killed a sniper who was harassing us. His objective was a machine gun post, which had been located in an isolated building. On leading his men forward he encountered unexpectedly a machine gun post which was holding up the advance of another company. He immediately attacked, capturing the machine gun and killing several of the crew. He then continued his attack on his original objective, captured the post, killed several of the enemy and put the remainder to flight. He died of the wounds he received during the attack.

Coolness and Daring.

A private who acted as scout worked his way toward the enemy lines with the greatest gallantry and determination in spite of the continuous fire of hostile snipers at close range. These snipers he stalked and killed. Later his patrol was held up and he again disposed of the snipers. During the subsequent withdrawal of the patrol he volunteered to cover the retirement, and this he succeeded in accomplishing. Throughout the enterprise he was under heavy machine gun and rifle fire, and his splendid example of coolness and daring was beyond all praise. After safely regaining our lines this very gallant soldier was killed by a shell.

Another private from one of my companies rushed forward under heavy fire and, reaching a German gun emplacement, threw a Mills grenade into it, killing two of the enemy and wounding a third. Subsequently entering the dugout, he found two light machine guns which he carried back with him. He undoubtedly saved many of his comrades and enabled the consolidation of our position to proceed unhindered by machine gun fire. In an attack a few days later on his own initiative he worked his way from shell hole to shell hole to our own barrage, rushed a machine gun and although under heavy fire captured it together with an officer and two men. This bold action was of great assistance to the company on the right and undoubtedly saved many lives. At any rate, it enabled the whole line to advance and gain the objective.

Saved by a Canadian.

I have a Canadian to thank for my life. I have told before of the incident that put me out of any further active part in the war. After three days in a water filled shell hole, with my arm smashed, my law broken and my whole body a wreck, I started in pitch dark to drag myself across No Man's Land to my home trench. In the end I lost my way. Suddenly I heard a Canadian sentry challenging. I called, "An English officer wounded!" I had stumbled onto a Canadian post, and one of those boys came through the wire after me. When we were almost safe a Very light went up and a Boche sniper got him through the shoulder. I still have part of my arm, but he has none of his.

The Kaiser when the war began thought little of the British army and gave orders to his generals to sweep General French's "contemptible little army" into the sea. How easy it was said, but how difficult a task he found it!

A GRENADE-THROWING SCHOOL.

Class in Bomb Sending Conducted Behind the French Front.

A realistic picture of a class in bomb-throwing that French officers conducted behind the front is drawn in Mr. Ralph Pulitzer's book, Over the Front in an Aeroplane. In the open recess in a trench, says the author, stood a noncommissioned officer of engineers. He was the instructor. At the order of the captain he placed an innocent-looking satchel on the edge of the trench at his right elbow, plunged a hand into it, and briskly plucked out, one after another, eight different varieties of bombs. Picking them up, one at a time, he gave a terse lecture on the construction of each and the method of using it.

When the sergeant of engineers had completed his little lecture, all of the soldiers and officers withdrew to the end of the field, some two hundred yards behind the trench, and there lay down on their stomachs. I got into the trench with the engineer, placing myself to his left in front of the entrance to the bomb-proof shelter, and the demonstration in the gentle art of grenade-throwing began. He took bomb number one, stuck the pin at the end of the cord firmly into the hole, swung his arm back and threw the missile a few yards into the field in the direction away from the soldiers.

Having seen the departure of the bomb, I ungracefully tumbled into the bomb-proof, with the engineer a close second. There was an appreciable pause, and then came an explosion, the violence of which really astonished me. I distinctly felt the ground shake.

After giving the fragments that had been hurled our way plenty of time to come down on the roof, we stepped out into the trench again. The engineer picked up another bomb, hammered the nail home with one sharp rap against the edge of the trench and sent the grenade hurtling through the air. The mechanism of the first bomb had not been put into operation until the bomb started on its flight, but the fuse of the second started burning the instant he hammered the nail in, and was burning while he was whirling his arm preparatory to letting it fly. As it had thus got a running start on us, we had barely time to get under cover before the explosion took place.

Next came bomb number three. The demonstrator adjusted a black hand round his left thumb, took the bomb in his right hand and gave it a scratch. He evidently had some doubts whether the first scratch had lighted the fuse, because after glancing at it he proceeded to give it a second hearty scratch before throwing it.

I need hardly say that I had already "made home base" in the bomb-proof and was entirely satisfied to watch from there his second effort, which, however, was crowned with complete success.

CANADA'S FALL WHEAT AREA.

Estimate of 711,112 Acres, or 4% Less Than for 1917 Crop.

The area in Canada estimated to be sown to fall wheat for the season of 1918 is 711,112 acres, or 4 per cent less than the area sown in 1916 for the crop of 1917. In Ontario the dry condition of the soil made it difficult to saw fall wheat, and the area is estimated to be about 4 per cent. less than last year. In Alberta there is shown to be a slight increase, or 61,384 acres, as compared with 60,776 acres. There are also small areas sown to fall wheat in Manitoba, 4,129 acres, Saskatchewan 11,883, and British Columbia 3,476 acres. The condition on October 31 for all Canada was 80 per cent., as compared with 76 per cent. last year.

Of the total land intended for next year's crops, 53 per cent. is estimated to have been ploughed by October 31, the percentage proportions in the west being 40 per cent. for Manitoba, compared with 47 per cent. last year; 37 per cent. for Saskatchewan as against 28 per cent., and 38 per cent. for Alberta as against 21 per cent. a year ago.

THE CONQUEST OF THE AIR

WORLD ALREADY CHARTED FOR AIR SERVICE.

Experts Believe That International Mail Routes Will Be Established Inside of Ten Years.

The world is already charted for air service. The aero clubs of France, Italy, England and America have worked out international routes. London to Halifax, London to New York, London to Paris, London to all the great cities of the world are main lines of the international map.

Lord Montagu has devised a mail route between England and India. As ordinarily travelled the distance is 6,000 miles, but he eliminates 3,600 miles by an airline over Russia, Germany and Austria. He estimates that the flight could be accomplished in 25 hours—36 hours from London to Bombay!

Another route he calls the Red Route, because for the entire distance the British mailplanes would fly over territory under the British flag, a distance of 5,220 miles to be accomplished in from 75 to 80 hours. Mail would be dropped at Basra, Alexandria, Malta, and Gibraltar. Captive balloons, illuminated at night, would be the route markers and landing stations would be arranged at convenient intervals.

New Era in Sight.

The most conservative experts appear to believe that national and international mail routes will be completely established within ten years. There are more radical thinkers who assert that the experience and lessons of war aviation will bring this blessing to civilization within five years.

After postal service, which will be the first great development of the airplane for commercial uses, it is generally agreed will come fast passenger service and regular service for express and freight.

The crossing of the Atlantic by air may be, indeed, a matter of weeks and months rather than years. Major Perfetti, head of the Italian army fliers now in this country, believes that the giant Caproni triplane can accomplish the feat easily, and has indicated his intention of attempting it.

Henry Woodhouse and many other students of aviation maintain that when the distance between continents is cut down to one day's travel, when the world sends and receives its mail by airplane, and when mankind realizes dominion over the air there will be a new sociologic era; that nations will be brought into much closer relationship than ever before; that there will be greater understanding and cordiality between peoples and that there will be far more tolerance for differences of aims and habits. As the airplane has been, perhaps, the most valuable agency for war, it may become, these men think, the most enduring influence for world peace.

A SOUTH SEA MARRIAGE.

Sailor Describes Recent Royal Ceremony in the Friendly Isles.

C. H. Hanson, first assistant engineer, and member of the crew of the motor schooner S. T. Allard, now of Honolulu, witnessed the marriage of Princess Charlotte Tobou and Prince William Tungi at Nukualofa, Friendly Islands, on September 20.

The Government band played all the ceremonial music, and other musical organizations assisted it throughout the day, he says. The wedding dress worn by the Princess was made in Sydney, Australia, and fashioned after the latest styles. The wedding cake, which was eight feet high and is said to have cost more than $500, was baked in Auckland, New Zealand. About twenty-five white people were present at the reception, others present being chiefs, officials and visitors from the surrounding islands.

At the wedding breakfast the table extended from inside the palace, where the royal party was seated, out through one of the doors for 250 feet. The guests were seated on either side. Tapa—a material made from the beaten bark of the mulberry tree—covered the length of the table. Friday was the big day for all the islanders who happened to be in the neighborhood of Nukualofa. Several thousand gathered in the palace grounds and the adjoining square in the early morning.

The king personally superintended the work of distributing hundreds of roast pigs among his subjects, many of the large porkers having smaller ones tied to them in a decorative way. It was a holiday for all.

The Paisley Advocate

PAISLEY, DEC. 19th, 1917

—The people have spoken. By expression of their voice through the ballot box they have chosen the membership of the next Parliament that is to transact the business of greatest importance that ever yet lay before the statesmen of this Dominion. In the conduct of our share in the great world war that is now at its most critical point in over three years' duration, the Union Government assumes the responsibility of "carrying on" the war operations vigorously and with an eye to the best interests of all classes in our country. The selection, by conscription, of men to furnish reinforcements for our overseas battalions, coupled with the duty of keeping up the production of foodstuffs, is a matter that entails grave responsibilities. A great deal depends upon how this business is handled as to whether the different sections of our vast Dominion will be drawn more closely together or cause for dissension given. Constructive statesmanship is demanded at this time more urgently than at any previous period in our history since Confederation.

TRUAX GETS BIG MAJORITY IN SOUTH BRUCE

Details of the vote in South Bruce are not yet to hand. Following are the majorities by municipalities:

For McNab—Elderslie 89, Kinloss 63, Huron 53, Teeswater 23, Lucknow 75—total 323.

For Truax—Brant 191, Greenock 104, Carrick 152, Culross 167, Walkerton 38, Chesley 51, Paisley 12—total 1139.

Majority for Truax, 816

CASTORIA

—The Montreal Star says Quebec will adjust to the new Government.

Exemption of Farm Hands and Farmers' Sons

The Government and military authorities are really taking precautions against the undue curtailment of food production in Canada by enlisting young men of the farms. The Department of Agriculture has appointed men to see that those engaged in actual farm work are not forced to go on the fighting line. Mr R D Northgrave, of Port Elgin, was selected by the Government to do this work in Bruce county. The following telegram explains the object of the appointment and the authority he exercises:

Ottawa, Dec 5, 1917

R D Northgrave, Esq.,
Port Elgin, Ont.

It has been brought to the attention of the Minister of Agriculture that in some case tribunals appointed under Military Service Act have selected farmers' sons and men employed as help on the farms, whom service could not be spared and would be the means of causing a restriction in the production of foodstuffs. In order that such results might not happen and as a protection to agriculture, the Minister has selected you to represent the Department of Agriculture and look into such cases in Bruce and take up same and communicate with the district military representative military headquarters, London, and report to such military officer your objections and in any way such person so selected about to be relieved from military service in order that he may remain on the farm.

GEO F HALLOWAY,
Deputy Minister of Agriculture.

It will be seen that Mr Northgrave has been given wide powers of recommendation after making inquiry in the case of each applicant.

On Saturday forenoon Mr Northgrave held a sitting in Paisley, when a number of those who have appeared before exemption tribunals submitted their case before him, and his recommendations will be made as early as possible. The following letter will be received by each of those who are granted exemption through this channel:

London, Ont., Dec 12th, 1917

From Capt Oliver Heaslewood,
London, Ont.

To.....

.....

Dear Sir—I beg to inform you that I have looked into your case and am satisfied that you are within the scope of Justice Duff's decision, which says that all persons habitually and effectively engaged in labor essential to Farm Production are to be exempted.

I have requested the military representative to withdraw opposition to your appeal and he will do so, so long as you are thus engaged. This means that the appeal will be allowed and you will be exempted while so engaged. (In addition, if you have not appealed it will be necessary for you to do so in order that you may get exemption as above).

Your tribunal did not have the advantage of Justice Duff's decision, or they, too, would have decided as above.

Yours truly,
CAPT OLIVER HEASLEWOOD

Mr Northgrave will be in Paisley again on Thursday afternoon, Dec 20th also at Eden Grove on Thursday forenoon.

No Municipal Elections Talk

A lively election contest adds a certain amount of zest to the life of ordinary democratic community. Lest a surfeit of that brand of diversion is not sought. The annual selection of municipal officers is almost due. At this date in December there is usually a slate of candidates for the honors, but this year with the Dominion election just over, there has been no line-up for the New Year ballot fight. There will probably be more boards returned by acclamation than usual.

Critical Illness

Mr Geo Grant, of Victoria St. was taken so seriously ill last week with stomach trouble that Dr Lucas of Guelph was called. An operation disclosed a perforation of the bowel, which was surgically treated and since then he has rallied to the point of improvement. Mr Grant has been visiting his daughter in Thornbury, and had gone to Toronto to meet Mrs Grant, who was returning from the west where she had gone when her sister, the late Mrs Henderson, was taken ill on her way from Paisley to her home in British Columbia.

McGillivray—Sharpe

A quiet wedding was solemnized at the home of Mr and Mrs; Sharpe, when their daughter Margaret May was united in marriage to D A McGillivray. As the wedding march was played by Miss Eliza Porter, the couple took their places under an arch Little Margaret Porter, niece of the bride, acted as flower girl. Rev Mr. Diehl officiated. In the presence of a small company of friends and relatives Mr and Mrs McGillivray will reside on the groom's farm on the 12th of Bruce. Their many friends extend the heartiest congratulations.

Good Roads Supt.

Wm Ian Izzard has been appointed Superintendent of the Good Roads by the County Council, Mr W Hunter of Kincardine finding that he could not spare the time from his factory business to give proper attention to his duties. Mr Izzard knows the roads of Bruce County from A to Z. Every year throughout his long term at County Council he was on the Road and Bridge Committee. For two years he was chairman. That was about the time when the county had to face a big expenditure to replace bridges swept away by floods. Mr Izzard handled a difficult situation and well proved himself to be the man for the job. In many respects he is the logical man for the Superintendency of Good Roads and we believe the County Council should be congratulated on securing his services.—Telescopp.

Red Cross Box Social at Lockerby

A very successful box social was held in Lockerby school on Friday evening, Dec 14th, under the auspices of the Lockerby Red Cross Society. In spite of the storm and the bad roads the schoolhouse was comfortably filled. Mr R C Pearce occupied the chair in his usual acceptable manner and kept the crowd in good humor by his witty remarks. The Paisley orchestra was present and rendered several selections in good style, which were much appreciated by the crowd. Miss Mabel Stanley and Miss Emily Mclouis, of Paisley, each contributed to the success of the entertainment by their singing, which was well received. Mr Baritrop, of Paisley, almost brought the house down by giving a couple of comic recitations. A dialogue entitled "Mrs Meggins," given by Miss Rose Bryce, Miss Edna Burns and Miss Maggie Curry, was sure comical and created lots of laughter. The boys' quartette of Paisley also rendered some fine selections, and the school children also appeared in some drills and choruses. Next came the selling of the boxes. Mr Pearce wielded the hammer and soon disposed of the bidders. The proceeds amounted to nearly $60. The society desires to thank all those who took part in the entertainment, especially those from a distance, and also those living near the school who kindly gave stable accommodation for the horses.

THE BLESSING OF A HEALTHY BODY

Has Not Had An Hour's Sickness Since Taking "FRUIT-A-TIVES".

MR. MARRIOTT

78 Lees Ave., Ottawa, Ont.,
August 9th, 1915.

"I think it my duty to tell you what "Fruit-a-tives" has done for me. Three years ago, I began to feel run-down and tired, and suffered very much from *Liver and Kidney Trouble*. Having read of "Fruit-a-tives", I thought I would try them. The result was surprising. During the 3½ years past, I have taken them regularly and would not change for anything. *I have not had an hour's sickness* since I commenced using "Fruit-a-tives", and I know now what I haven't known for a good many years—that is, the blessing of a healthy body and clear thinking brain".

WALTER J. MARRIOTT.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Died in Chicago

News of the sudden death of Alexander Duff McIntyre, third son of late John C. and Mrs McIntyre, of Paisley, caused a shock to the many friends of this widely known and highly respected family. The deceased was engaged in the broker age business in Chicago, dealing extensively in wholesale quantities of butter, eggs and poultry. In the past fourteen years he built up a trade exceeding a million and a half dollars per year, and won the reputation of having the clean est broker age business in that great centre. The attainment of such a measure of success was due not to favorable circumstances, but to the energy, enterprise, intelligent and judicious management exercised by the deceased in carrying on the continuously extending operations of the McIntyre Company, by which name the concern was known. In addition to his own business responsibilities, he was secretary of the Poultry, Butter and Egg Association. The deceased was born on the family homestead on 2nd con Elderslie, attended S S No 1, took the high school course at Walkerton and Owen Sound, and entered the teaching profession. After presiding two years at Elora Road North school and one year at Lockerby he attended Normal, Faculty of Education and Toronto University, qualified as a high school teacher and was for four years on the staff of Tillsonburg high school. Then he went to Chicago, where he studied law, but at the same time was doing clerical work for a large packing firm. At this point in life he decided to follow commercial lines. At the end of two years more experience gained in New York city he returned to Chicago and established the business of which he was thereafter the head. On thursday afternoon last he was found dead at the desk in his office. Acute dilatation of the heart was the cause. The remains were brought to Paisley on Monday, and the funeral took place on Tuesday afternoon from the residence of his brother-in-law, Mr D A Lyon. Interment was made in the Paisley cemetery. The services were conducted by Rev G C Little of Knox church, assisted by Rev A J Creighton, Methodist. The deceased having been a member of the Masonic order, the rites of that fraternity were performed by the brethren of Ashworth Lodge who attended in a body. The floral tributes from Chicago were most beautiful. The deceased who was unmarried, is survived by his aged mother, four brother and four sisters—Dan and John of Eldersllie; Joseph of Kincardine; Mr George of Toronto; Mrs A D McKay, Mrs John Oswald, Mrs John Maxwell, of Eldersllie; Mrs D A Lyon, of Paisley.

—Now that the elections are over, the Dominion can give some concerted attention to the needs of the devastated city of Halifax. While possibly immediate needs may be met by the spontaneous generosity of many cities of the continent, there will be urgent calls for enough money to rebuild the thousands of homes that were totally wrecked by the explosion, the occupants of which were in the majority of cases left worse than penniless. It has been proposed that the Government use the surplus subscriptions to the Victory loan as a building fund, but it is not probable that such a step will be taken. It will be more likely that the raising of a fund will be left to the further generosity of the public. In such event local municipalities should all do their bit to relieve the distress of the seaboard city. Paisley should soon move to contribute something. It is estimated that between thirty and forty million dollars will be required to rebuild the city.

—A Mildmay citizen purchased a cow recently from a lady resident in Caistor, for the sum of $90. The lady's husband now is bringing an action against our townsman to recover the sum of $100, which he claims is the value of the cow. The plaintiff maintains that he was the owner of the cow, and that his wife had no right to sell the animal.—Mildmay Gazette

WOMEN ARE NEEDED
TO HELP IN WAR

Women can be usefully employed in nursing the wounded, in making up the soldiers' kits, and a thousand other ways. Many Canadian women are weak, pale or anemic from woman's ills. For young girls just entering womanhood; for women at the critical time; nursing mothers and every woman who is "run down," tired or over-worked—Doctor Pierce's Favorite Prescription is a special, safe and certain help. It can now be had in tablet form, procurable at any good drug store, or send Dr. Pierce, Invalids' Hotel and Surgical Institute, Buffalo, N. Y., 10 cents for trial package. Branch office, Bridgeburg, Ont.

St. Catharines, Ont.—"I have taken Dr. Pierce's Favorite Prescription during expectancy when I felt especially in need of a tonic and it benefited me greatly. I always take pleasure in recommending 'Prescription' to young mothers, because I know it will never fail to help them."—Mrs. J. H. Fawcett, 8 Beach St.

Stratford, Ont.—"I do think Dr. Pierce's Favorite Prescription one of the best medicines I have ever known for the ailments of women. I had for quite a long time been all run-down, weak and nervous. I despaired, but suddenly seemed to give an relief until I began taking 'Favorite Prescription.' This medicine gave me such wonderful relief that I am glad to recommend it to others."—Mrs. J. Gowrie, 60 Brant St.

ELDERSLIE COUNCIL

Guilfe Hill, Dec 15th, 1917

All members were present at meeting on above date.

Mr Calvin Crawford, tax collector, reported that there were some taxes still unpaid. On motion of Messrs Allen and Thomson the time for returning the roll was extended until 11 o'clock, Dec 31st.

Lewis — Fraser — That regarding the communication from Mr Wm Elliott, asking compensation of $1 per month for use of bridge by public, and that as said bridge appears to be on a private road this council cannot recommend payment. —Carried.

The following parties were appointed deputy returning officers and poll clerks, and a by-law passed confirming same: No 1, Minta Jackson, D R O, W E Patterson, poll clerk; No 2, Jas B McBride, D R O, A Mitchell, poll clerk; No 3, Wm Harris, D R O, Wm Cruickshanks, poll clerk; No 4, D A McIntyre, D R O, W T Thompson, poll clerk.

Allen — Thomson — That orders be issued for the following accounts.—Carried.

W R Barnett, grant to Paisley Agricultural Society, $25; Geo Warmington, grant to Chesley Agricultural Society, $25; Wm McDonald, bal printing contract, $15; D McKenzie, bal printing contract, $20; Geo Addison, 52 yds gravel per J Stoddart, $5.20; Geo Addison, 62 yds per Jas Vanclee, $6.20; Jas Vanclee, 26 yds per Jas Vanclee, $2.60; Jas Thomson, 45 yds per A Gowanlock, $4.50; Thos Collins, 14 yds per T F Pearce, $1.40; M McKillop, boom on 45 rods wire fence, $4.50; Jennie Cameron, boom on 60 rods wire fence, $6; Alex Gowanlock, gravel contract, con 4, $36.25; Wm Gordon, deepening ditch lot 16, con 14, $3; Jas Hammond, gravel 5 sidecuts, con 6, $80.50; Harry Wilson, gravelling, Dobbinton, $3; Jas Bice, gravel contract, 15 sidecuts, $36; John McCullough, cleaning ditch, lot 20, con 2, $5; T F Pearce, gravel contract, lot 4 and 5, con 6, $112; H H Foster, repairing culvert, 30 sidecuts, $1.50; H H Foster, rep bridge, Rd & Art 1, $1.50; S Downer, cement like, $69.05; Municipal World, supplies, $3.30; J A McDermid, sheep killed by dogs, $10.50; Hugh Watt, repairing bridge, lot 20, con 9, $34.45; Thos Collins, 210 yds gravel per H Rudolph, $21; Geo Heath, 10 yds per H Rudolph, $1; H Rudolph, gravel contract, Elora road north (county work), $281; Jas Bice, drawing tile and building culvert, con 4, $5; Wm Brown, inspecting gravel contract, con 6, $9.50; Jas R Cam, inspecting contract, $7.50; A G Eagles, treas Arran, work on town line, $7.50; Thos Magee, treas Sullivan, work on town line, $58.18; Roy Buckley, cement tile, $122.75; S M Ewart, war tax on checks, $5; John Oswald, witness fees, Henry vs Eldersl'e, $2; J C Milne, witness fees, $2; Wesley Robinson, witness fees, $2; S M Ewart, salary as treasurer, $110; R C Pearce, half year's salary as clerk, $92.50; Jas E Cass, services as reeve and road commissioner, $45; Jas Thomson, services as councillor and road commissioner, $18; W J Allen, $45; Jas A Lewis, $45; C A Fraser, $45; John McAllister, 6 months' salary as caretaker of hall, $5.

Fraser — Lewis — That this board do now adjourn to meet again at 11.30 o'clock a m on Monday, Dec 31st, to receive collector's roll.—Carried.

R C PEARCE, Clerk

A DEVOTED SOLDIER

PTE. THOS. A. WOODS

Son of Mr and Mrs D Woods, Lovat, killed in action Nov 6th.

In the Field, Nov 20th, 1917

DEAR MR WOODS — The commanding officer wishes me to convey to you his sincere sympathy on the loss of your son, 1004455 Pte T A Woods, who was killed in action on Nov 6th. He was a good soldier and showed splendid devotion to duty whilst serving with this battalion. His loss is keenly felt by all ranks of his company and especially his platoon comrades, with whom he was deservedly most popular. Assuring you of deep sympathy.

Yours very truly,

T C FLOYD, Major, for O C

16th Cdn Inf Bn "Canadian Scottish"

Dr. McKechnie Says We Must Conserve

Conserve is the word Canada must soon heed. The editor had the privilege of spending a very pleasant couple of hours in company with Capt. McKechnie one evening last week. Dr McKechnie is a former Saugeen man, who went to Vancouver, and became known as a specialist in surgery. When war broke out his services were sought and he went soon to Saloniki and in Greece he has spent two and a half years. Now he is invalided home, being bothered with malaria, and stopped over here to visit his brother, Robert, and sister, Mrs Mather.

Capt. McKechnie abandoned a practice which brought him nearly $10,000 a year. When people get worrying over how much they think they are doing to help win the war, turn to the thousands of men in the professions who have closed up their business, their all, and gone into the army at army pay. Measured by this standard, how foolish it is to attract attention to the giving of a few dollars.

Preparedness!

BE PREPARED! Don't put off your Christmas shopping until the last day. Shop early, when you are not rushed. You get the best choice of goods. We are prepared with an extra heavy stock for this year's Christmas trade.

Groceries

This department is full of Choice Fruits, Peels, Spices, Nuts, etc., for your Christmas baking.

Confectionery

All the dainties in Confectionery you will find here. Choice Candy by the box, from 25c each up to $1.50 each, also a great variety to choose from by the pound.

Big Juicy, California Oranges, Grapes, Apples

China

Nothing nicer and more useful than a nice piece of China. Our new stock, which has just arrived, was bought last winter. The prices are remarkably low. You will be surprised when you see this array of dainty China.

Slippers

A fine selection of warm House Slippers for every member of the family—dainty in appearance and not expensive.

Produce

We want your Dressed Poultry, Butter, Eggs, &c., and will pay the top price in cash or trade.

F. CARTER & SON

"The House of Quality"

Goods Delivered — Both 'Phones

For Your Motorist Friend

A Fitting Christmas Gift

THERE is no need to worry about what to give "him" if he drives a car. Whether it's a Rolls-Royce or a Ford, you can settle the gift problem right now by buying him a Goodyear Tire-Saver Kit.

This neat little Kit is probably the most appropriate present any one can give a motorist. Because it fills a real need, it will be appreciated even more than something of a "personal" nature costing twice as much.

The Goodyear Tire-Saver Kit is packed with articles for the conservation of tires—patches, putty, blowout protectors, even an air-pressure gauge. Your motorist friend will at once recognize the value of each thing. Afterwards, when he actually uses the Kit, he will wonder how he ever got along without one before.

You, too, will enjoy giving him a Tire-Saver Kit. For you will experience the satisfaction of giving something eminently *fitting*. You will be expressing your gratitude, in a practical way, for those pleasant motor drives last summer.

He will probably receive some "motor presents" from his other friends. *You* can be the one to give him the "motor present" he needs most—a Goodyear Tire-Saver Kit.

The Goodyear Tire-Saver Kit comes in two sizes — one for small and the other for large cars. Just tell us the make of "his" car.

Price:

(3½-4 in.) - $4.75
(4½-5 in.) - 5.00

See them in our window to-day.

Sinclair's Hardware

Paisley

—But we are getting away from our story, Dr McKechnie didn't say anything of his sacrifice. We gathered it from questions we put, but he did say that the whole man power of Great Britain has been conscripted. "Talk about farming," said the Captain, "the women and old men are doing it in England, and producing more foodstuffs under the system, than was ever produced before. There is not an able bodied man of eligible age in Britain who is not either at the front, or in army service."

"There are 11,000,000 men in England alone serving either in the army or doing war work. There is no room there for profit. Everything is conscripted."

"No one can fully appreciate what it meant to the Allies when the United States entered the war. The Anglo Saxon is the greatest soldier in the world," said the doctor.

Referring to Greece, he said that the climate was much like southern California but there was considerable malaria and the soldiers frequently contracted it. They raise great crops of barley, wheat, etc, the ground being very fertile, but their methods of working were woefully behind the times. They plow with the same kind of plow that Abraham of old used—just a stick in the ground pulled by an ox. When cutting time was on the whole family went to the field with knives, sickles etc., and later the oxen tread out the grain. They spin the wool and make their own cloth and clothes, everything done as in the early days of John the Baptist. The shepherds abide in the fields and watch their flocks by night, while it is only lately that the brigands have been cleared out of the land by the Greeks. Wheat sold there for $8 a bus.

Rationing in England is carried out with a vengeance. Dr McKechnie while staying at a $5 a day hotel was served with very small portions of bread, potatoes, meat, milk and sugar, and everything is carefully watched by the Food Controller. The saloons are open only a few hours a day now, but they are crowded with women.

"This is the one thing a Canadian does not understand" said the doctor, "how in this terrible struggle Britain cannot shake off the drink evil."—Times.

Had Won the Military Medal

PTE. JOHN McAFEE

Killed in action on Aug 19th, eldest son of Mrs H McAfee, 14th con Greenock.

The deceased had been living in Vancouver for a number of years. He leaves to mourn his loss five sisters and two brothers—Mrs T Houston, of Pinkerton; Mrs R F Pinkney, of Marbel, Cuba; Miss Ida, superintendent of training school for nurses in the Homer Hospital, Rochester, N Y; Miss Bertha, graduate nurse, of Washington, D.C.; Miss Phoebe, at home; Robert J and Edgar. The last named is with the 160th Bruce Batt in England, and to him the following letter was written:

France, Oct. 27th, 1917

Pte R J McAfee, 160th Bn. C E F

I received your letter of October 14th a few days ago. I wrote to your mother a few days after your brother was killed, so she should have received all particulars nearly two months ago. Pte Jack McAfee No 409811 had been runner for a section for quite a time. He was awarded the Military Medal for the splendid work he did at Arleux on April 28th. On this occasion he made several trips under the heavy fire shell fire back to company H Q with messages, and bandaged up and took out to a dressing station a wounded comrade from a particularly warm corner.

On August 18th we went over the top again in the Hill 70 show. We had very heavy casualties after we had reached our position. Your brother was killed on the afternoon of the 19th. He was in a funk hole next to mine. There were a couple of practically direct hits by heavy shells on the former. Your brother must have been killed. I was with a section for about seven months, and there was no man in the section more respected than your brother. He was always cheerful and devoted to duty as well as universally liked. His loss was felt very much by us all. Major Stewart, our O C felt very badly and would have written but he went to the hospital just after we came out of the line. Your brother's personal effects were forwarded to the Base and your mother should have them by now. Any further information I can give will be a pleasure.

O C FERRIE, Capt

THE

Hospital for Sick Children

College St., Toronto

ITS CHRISTMAS MESSAGE

Dear Mr. Editor:—

Thanks for your kindness in allowing me the privilege of appealing to your readers this Christmas time on behalf of the Hospital for Sick Children, the "Sweetest of all Charities," which has as its mission the care of the helpless the sick, the crippled and the deformed.

There never was a year in the history of the Hospital when funds to carry on the work were more needed than now.

Your purse is the Hospital's Hope. Your money lights the candles of mercy on the Christmas trees of health that the Hospital plants along the troubled roadway of many a little life.

So I am asking you for aid, for the open purse of the Hospital's friend is the hope of the Hospital at Christmas just as the open door of the Hospital is mercy is the hope of the little children throughout the year.

Calls on generous hearts are many in these times. Calls on the Hospitals are many at all times, and especially when food and fuel and drugs and service costs are soaring high. YOU know the high cost of living. Do you know the high cost of healing—of helping the helpless—to happiness? What you do to assist is the best investment you will ever make.

Do you realize what this charity is doing for sick children, not only in Toronto, but for all Ontario, for out of a total of 3,740 in-patients last year 548 came from 254 places outside of Toronto. The field of the Hospital's service covers the entire Province—from the Ottawa to the far-off Kenora—from the borders of the Great Lakes to the farthest northerly district.

The Hospital is doing a marvellous work. If you could see the children with crippled limbs, club feet, and other deformities, who have left the Hospital with straightened limbs and perfect corrective, your response to our appeal would be instant. In the Orthopedic Departments last year a total of 836 in-patients were treated and in the Out-Patient Department there were 1,946 attendances.

Let your money and the Hospital's mercy lift the burden of misery that curses the lives, cripples the limbs and saddens the mothers of the suffering little children.

Money multiplies the powers of help and healing for the Hospital's drive day and night against the trenches where disease and pain and death assail the lives of the little ones.

Remember that every dollar given to the Hospital is a dollar subscribed to the Liberty Loan that opens the prisons of pain and the Bastilles of disease, and sets little children free to breathe the pure air, and to rejoice in the mercy of God's sunlight.

Will you send a dollar, or more if you can, to Douglas Davidson, Secretary-Treasurer, or

J. ROSS ROBERTSON,
Chairman of the Board of Trustees.

The Store of Quality

GREET your friends with useful presents this Christmas season. The easiest way to enjoy real happiness at Christmas time is to feel that you have made someone else happy, and the best way to do that is to give a useful, serviceable gift, one that will be cherished the whole year round.

Brass Goods

are always acceptable

Brass Jardiniers 75c to $4.50

Soils and Crops

By Agronomist

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this columns. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

NEVER BURN HUMUS-MAKING MATERIAL

Too many of us are quite thoughtless about the use of fires on the farm. Fires, on the average farm, do far more harm than good.

Everyone who burns stuff in the field or woodlot does it because he believes he is destroying either weed seeds or useless rubbish. This attitude is all right, provided we revise our definition of rubbish and get a clearer notion of the methods by which weed seeds are distributed.

It is quite sure to find any amounts of weed seeds, especially of the more obnoxious weeds, still in the seed heads and up from the ground sufficiently to be burned by the usual spring fire.

In fact, one of the chief reasons why certain weeds have been dubbed "noxious" is because they have developed, during many generations, the ability to survive the various adverse conditions and rough treatments to which the farmer has subjected them.

Usually the amount of vegetable matter destroyed when stubble or other growth is burned over in the spring to kill weed seeds would do far greater service if plowed under to help the corn or other crop to outgrow the weeds.

Do Not Rob The Land

I have known of many cases where stubble ground which was to be put in to oats or some cultivated crop was burned over for the sole purpose of making plowing appear easier. The man who robs land in that way, even if the land is his own, ought to be indicted for robbery and prosecuted to the full extent of the law. Such willful destruction of the most vital element in the maintenance of soil fertility and tilth is certainly criminal, not only against the present but against future generations. It is this disregard for the preservation and turning under of humus making materials which has done more than anything else to cause the abandonment of so many farms in older sections of the country—this is what causes the land to "run down," "run out" and become worthless for agricultural purposes until the humus is restored.

It is very fortunate that public sentiment is being educated and undergoing marked changes in this matter. Most everyone who was raised in the grain growing section of our county can well remember when it was the regular custom to burn nearly all of the stubble and large stacks of straw, and thousands upon thousands of acres of cornstalks. Now most of us see that such wholesale destruction was sheer wastefulness.

Thousands of dollars worth of organic matter which should go into the compost heap are burned every year in Ontario. Any manufacturer who would be so wasteful of a by-product would deserve to fail.

Other thousands are cut by the burning of the vegetable mold, leaves, and twigs which are present in newly cleared land. Fire, because of its terrible power to destroy organic matter, has been used from the earliest times in clearing land. Undoubtedly fire is doing much more good than harm when one uses it to burn large log heaps, or big brush piles, but great care should be taken to burn these at a time when it is damp enough to prevent the fire from spreading and burning the leaves, twigs and leaf mold over the entire clearing. By allowing the fire to cover the entire clearing one may destroy as much plant food in the form of organic matter as he can replace by rotating crops for the next eight or ten years.

No fire should be started on the farm unless its purpose is quite definite and useful. By exercising the proper care along the lines outlined above Ontario farmers may, instead of wantonly destroying it, turn millions of dollars worth of humus-making materials into gold that will clink in their pockets and aid in swelling the profits of the farm.

Value of Compost Heap

There should be a compost heap on every well managed farm. Several tons of organic rubbish should be placed on the pile every year. It is really a rick or long pile, the new material not being thrown onto the old rotten compost but should be made into a long pile. Whenever some especially well rotted, rich material is wanted for hot-bed, garden, etc., the little compost is ready.

Other organic matter, leaves, and twigs which are present in newly cleared land. Fire, because of its terrible power to destroy organic matter, has been used from the earliest times in clearing land. Undoubtedly fire is doing much more good than harm when one uses it to burn large log heaps, or big brush piles, but great care should be taken to burn these at a time when it is damp enough to prevent the fire from spreading and burning the leaves, twigs and leaf mold over the entire clearing. By allowing the fire to cover the entire clearing one may destroy as much plant food in the form of organic matter as he can replace by rotating crops for the next eight or ten years.

No fire should be started on the farm unless its purpose is quite definite and useful. By exercising the proper care along the lines outlined above Ontario farmers may, instead of wantonly destroying it, turn millions of dollars worth of humus-making materials into gold that will clink in their pockets and aid in swelling the profits of the farm.

Poultry

Every year at the beginning of winter many poultry keepers are disappointed and puzzled by the failure of apparently well grown pullets to lay according to expectation. They can not understand why early pullets that seemed to be developing nicely and show the usual signs of being near laying should remain at that stage for weeks and sometimes for months.

Where the conditions are as described, the most common cause of deferred laying in an insufficient ration.

Underfeeding in the early fall occurs oftenest through the failure of the poultry keeper to increase the food given to pullets as range as much as is necessary to make up for diminution in the supplies secured by foraging.

Underfeeding after the pullets are put into winter quarters is usually due to excess of care to prevent them from becoming too fat to lay.

In either case the remedy is to feed the birds all that they will eat of a substantial ration, furnishing in proper variety the food elements required, taking care at the same time to provide for as much exercise as will keep them in good condition under heavy feeding.

While pullets remain on range the only changes in diet usually necessary as cool weather comes on are to increase the quantities of food given, especially corn and corn products, and if green food on the range is running short to supply what is required to make up the shortage.

It is desirable to have pullets in their winter quarters about a month before they are expected to begin laying. Moving them at that stage does not retard laying, while if they are moved shortly before or after beginning to lay the change may set them back several weeks.

Pullets that will not begin laying before winter sets in may be left in the coops which they occupied while growing as long as the weather permits them to range.

When the pullets are in winter quarters and are dependent upon the feeder for all green food and animal food as well as for grain, one of the following rations will supply the variety required. The proportions indicated are parts by weight.

Ration No. 1.

Dry mash	Scratch feed
2 parts bran	2 parts cracked corn
2 parts middlings	
4 parts cornmeal	1 part wheat, oats, or barley, or mixture of the three
1 part beef scrap or fish meal	

Green food
As available, in constant supply

Ration No. 2.

Dry mash	Scratch feed
6 parts mixed feed (bran and middlings)	Whole or cracked corn, wheat feed, cabbage in constant supply.
4 parts cornmeal	
1 part beef scrap or fish meal	

Ration No. 3.

Dry mash	Scratch feed
4 parts cornmeal	Wheat
2 parts bran	Green feed
1 part beef scrap or fish meal	Sprouted oats, cabbage, or mangel beets.

Ration No. 4

Dry mash	Scratch feed
6 parts cornmeal	Heavy oats
2 parts bran	Green feed
1 part beef scrap or fish meal	Sprouted oats

Ration No. 5.

Dry mash	Scratch feed
3 parts cornmeal	2 parts cracked corn
1 part beef scrap	1 part oats.

In deciding upon a ration a poultry keeper should be governed largely by the availability and cost of foodstuffs in his locality. The common grains do not differ extremely in composition and food value.

Uses for Salt.

Sprinkle a little salt in the skillet before placing the fish in it to fry and it will not stick to the pan.

Make a little salt bag and rub the griddle with it; pancakes will not stick and there will be no smoke or odor.

Cakes may be prevented from burning by sprinkling a little salt in the bottom of the oven.

When grease or milk has been spilled on a hot stove the odor arising from this may be removed by sprinkling with salt.

Egg stains on silver can be removed by rubbing with a little salt and a damp cloth.

Sheep Notes

Early Spring Lamb.

Early spring lamb, as I understand it, is an animal finished in January and February, says an exprt. It must be young and tender and toothsome. I breed early lambs from the meat grades. I prefer Shropshire and Hampshire sires of good conformation and a Southdown ram. This cross has always produced a lamb of quality for me that commands a top price.

Raising early lambs is a profitable business on any Ontario farm. The lambs are finished and marketed early and the ewes are sheared during April. At that season the fleece is in first-class condition and will command a good price in the wool market. The wool helps to pay for the cost of feed. And the manure is a rich fertilizer that is worth all the straw and roughage used to make it.

I consider it costs me about two cents a day to feed a sheep, because I raise all the rations and roughage on the farm. Under my system of raising sheep, I buy the ewes at the stock yard in July, and the same animals are conditioned for market and sold the following March or April.

Indications point to high prices for early lambs this coming spring, and ewe sheep will cost considerably more than in 1916 and 1917, but I believe the price of hothouse lambs will sell in proportion to the cost of production.

My method of handling sheep should appeal to the busy farmer who has limited pasture land and little waste ground. It gives an incentive to raise sheep because the system has many features that must appeal to the business farmer. The net profit is great on the capital invested, and the work of caring for the sheep comes after the outside labor is over and the sheep are sold before the next year's work begins. The price of lamb and mutton is high, and will remain above the old figures for a long time, I am sure. The public is getting to prefer lamb to mutton, and it is up to us farmers to encourage their appetite and supply the demand.

The Dairy

"It has been clearly demonstrated that the good dairy cow is a most economical producer than any other farm animal," says Prof. F. S. Archibald, Dominion Animal Husbandman. "Not only does she actually yield more product from a given amount of feed, but she does that at the least cost and the greatest profit."

"Notwithstanding these facts, the production of milk and fat from the average cow is exceedingly low, being approximately 3,800 pounds of milk and 130 pounds of fat per annum, which in value is less than the total cost of production. Nevertheless, it has been clearly demonstrated that by better feeding and management this average may be easily increased from 30 to 80 % with an increased cost of feed and labor of only 10 to 20 per cent.; the margin would be largely profit. Such an increase is not only a financial necessity but the patriotic duty of every dairy farmer."

Do not allow dirt to accumulate in the manger or under the water-box. It soon becomes foul and causes the animal to lose its appetite.

Delicious Dishes of Pop Corn

This year because of the scarcity of sugar we must use less for our Christmas candies. Every pound of maple sugar, honey or molasses that we use instead of white sugar means more for food for the British and French children. If we can, in addition, spread the candy we make over the surface of pop corn kernels, an even greater saving of sugar will result.

Pop corn, salted, buttered, or mixed with molasses, is a wholesome and inexpensive confection. Pop corn cake may be molded in the form of soldiers, cannon, dolls and other shapes. Fancy boxes or net bags filled with prepared corn will delight the little folks. Combinations of dried fruits and nuts may take the place of candy in filling Christmas boxes.

The following are excellent recipes:

Pop-Corn Balls

Mix 2½ cups molasses and ½ cup brown sugar, 1 tablespoon butter and 1 tablespoon vinegar and boil until it hardens when dropped into cold water. Have ready 5 quarts of pop corn, free from any imperfectly popped grain. Pour this mixture over the corn; mix well. Dip the hands into cold water and press the corn into balls.

Chocolate Pop Corn Fudge

Cook together a pint of sugar, half a pint of milk, 2 squares of bitter chocolate, 1 tablespoon butter, and a saltspoon of salt, until the soft ball stage is reached. Then remove from fire; add a teaspoon of vanilla extract with 1½ cups of coarsely chopped pop corn. Stir until the mixture is creamy but still soft; pour into greased pan, and when it hardens sufficiently, mark into squares.

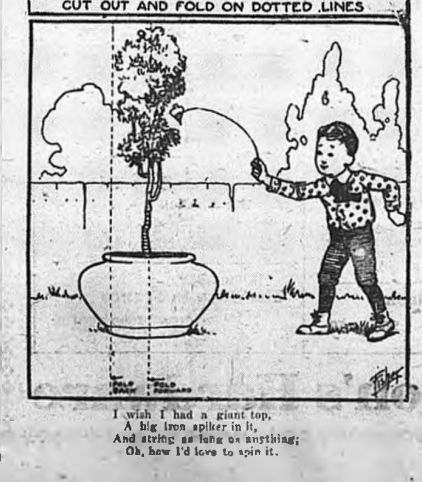
Maple Pop Corn Squares

Boil together 2 lbs. brown sugar or maple sugar, 1 pint new milk, and ¼ teaspoon cream of tartar. When the syrup makes a soft ball in cold water add 2 tablespoons butter; stir it gently and remove from the stove; add a teaspoon vanilla; set the pan in a vessel of cold water and beat until it begins to cool. Then pour into greased, straight-sided pans, and strew thick with pop corn, while still soft cut into squares, but cut again in the same lines when cold. Wrap the pieces in waxed paper.

Pop Corn Cake

One quart popped corn, 1 cup sugar, ¼ cup corn syrup, ¼ cup water, 2 tablespoons molasses, 1 tablespoon butter, 1 teaspoon salt. Pick over the popped corn, discarding all hard kernels, and finely chop the corn, or put through meat grinder, using a coarse knife. Put sugar, corn syrup and water in saucepan, stir until it boils, and cook to 270 degrees F., or until candy cracks when tried in cold water; add molasses and butter, and cook to 290 degrees F., or until it is very hard when tried in cold water. Add corn, stir until well mixed, return to fire a moment to loosen it, then pour on buttered slab or tray and roll with rolling-pin as thin as possible. Cut in squares or break in small pieces. Molasses may be omitted.

Maple Corn Balls



Three quarts popped corn, 1 cup maple syrup, ½ cup sugar, 1 tablespoon butter, ½ teaspoon salt. Pop corn and pick over, discarding kernels that do not pop, and put in large kettle. Melt butter in saucepan and add syrup and sugar. Bring to the boiling point, and let boil until mixture will become brittle when tried in cold water. Pour mixture gradually while stirring constantly, over corn which has been sprinkled with salt. Shape into balls, using as little pressure as possible.

Pop Corn Fruit Cookies

Mix ½ cup each of fine-ground pop corn, sugar, and fine-cut figs or other dried fruit with ½ cup each of shortening and milk and a beaten egg. Gradually add 1 cup each of wheat flour and cornmeal, into which 1 teaspoon salt, 1½ teaspoons nutmeg and 4 teaspoons baking powder have been sifted. Roll 1-3 inch thick; cut out and bake in a moderate oven.

Fruit Nut Caramels

1 cup figs, 1 cup dates, 2 cups walnuts. Wash and stone the dates, wash figs and remove stems, and put with the nuts through food chopper. Mix together thoroughly and press firmly ¾ inch thick into a small buttered pan. Cut in squares, or shape in small balls and roll in icing sugar.

GOOD HEALTH QUESTION BOX

By John B. Huber, M.A., M.D.

Dr. Huber will answer all signed letters pertaining to health. If your question is of general interest it will be answered through these columns if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Huber will not prescribe for individual cases or make diagnosis. Address Dr. John B. Huber, care of Wilson Publishing Co., 73 West Adelaide St., Toronto.

Consumption—Death's direct door to most hard students, divines, politicians, physicians, deep lovers, zealots in religion.—Old Saying.

FROM THE SECOND TO THE THIRD YEAR.

A self-directed envelope I will mail you the information you desire.

Rest in Tuberculosis.

What do you mean by rest in tuberculosis?

Answer—Such a sufferer must rest. There is otherwise no hope for his emaciated body, an organism on the verge of bankruptcy. Here is, of course, a factor difficult of management especially among the poor (who furnish the majority of consumption cases), many of whom feel that they must somehow work in order to maintain themselves and their own. And yet there has to be rest, especially when there is fever; and at least until the sufferer has recuperated from the prime predisposition to this disease. For the consumption germ fattens on devitalized tissues.

The rest has got to be absolute if the bodily temperature reaches 100 degrees by the clinical thermometer; and the bed inexorably when the fever has gone above this. The rest should if possible, be outdoors—at least with open windows. When the air is cold warm headgear is to be worn; or the woollen "helmet" which comes down over the collar bone. And the footwear must be at least as ample and as comfortable as the hat gear. The body must be abundantly clothed; there are sleeping bags made for such patients. The idea of sleep is involved in that of rest. Nowhere else should nature's soft nurse be so sedulously wooed. Insomnia is most exhausting in such a disease as this, when it is so necessary to conserve and build up the strength. Nor has any restorative ever been invented to compare with sleep. Insomnia, with fatigue and over exertion, have predisposed many to tuberculosis. We strive to induce sleep without medication if possible; may among other ways, be induced by drinking of hot milk after the patient has been tucked away for the night.

How To Wrap Xmas Boxes.

Christmas packages are getting more attention this year than they did last. Since gifts are to be more practical and not of the decorative type the outside of the package must be decorative. For the last two or three years people have used for wrapping tissue paper of various colors, generally; has tied a package up with red, green or holly ribbon, and have thought they had solved the problem. This year givers must consider the individuality of every person to whom a gift is sent.

Again paper is scarce and every scrap to be found about the home should be utilized. Almost every household has stored away in the attic or storeroom rolls or parts of rolls of wall paper. These pieces can be used for wrapping the Christmas packages to good advantage.

For the round flat package containing some soft fabric, yellow could be used tied with black ribbon, or if necessary one could purchase raffia in various colors for a small amount, much less than the cost of ribbon, and then tying the bow a small bunch of flowers, perhaps the best ones of a spray which has been used on a hat, could be slipped in the knot. The paper may be a little hard to handle. If it is cut in shaped pieces use paste to keep it in place.

A pretty bag for a young woman would look well wrapped in paper of a Dresden design tied with light blue or green ribbon. For a man a plain brown paper tied with red or green raffia is very sensible, since a man has no use for ruffles or furbelows of any description. Bright green or yellow beads are fastened on the ends of the raffia. Most men like red and blue, and it would be a good idea to add a touch of color to the strings where it harmonizes with the wrapping. With green or red sealing wax the package is complete for the male friend or relative.

Sealing wax can be made decorative in many ways. Green or red would be the best for Christmas, and if one has nothing else to seal it with use one of the new coins, or a thimble, but much better would be a monogram. Pendant bows beaded are especially suitable for children.

For the package for little folk the shape should be disguised and it should be wrapped securely. Oftentimes their little eyes light upon things which mothers think are safely hidden, and if the package is not safely wrapped the surprise is spoiled for Christmas morning. Little folk are very wise and can often tell by the shape of a package what it contains. Covered with soft green or gray tissue paper and tied with bright green or red ribbon or raffia, with two little bells tied to the bow, an especially attractive package may be arranged for the children.

Often small Santa Clauses tied on the boxes for little folk make a pleasing impression, even through the children are curious to get to the inside. With a round package wrap the crepe paper about it loosely, bring the paper to the top to form a rosette and tie with ribbon and with a spray of flowers or holly in the centre.

Horse Sense

Good Action in Draft Horses.

Size and power are of little value if the draft horse has not enough action to handle his big weight in an efficient manner.

The action of the draft horse should be bold, clean, and somewhat stylish.

The feet should be carried forward and back in a straight line without paddling, winging, or other irregularities of gait. It is necessary that the feet move straight and smooth in order to get the best and greatest stride with the least energy.

Knee action in a draft horse is not important. A long stride which covers considerable ground is much more important than high knee action. Ability to cover ground is what is wanted in the draft horse.

The walk is the important gait. It should be true and snappy and have a good length of stride. The action of all four legs should be strong, and the movements of the knees and hocks free, without indication of dragging or stiffness.

Although the walk is more important from a working standpoint, it is necessary to note an animal's action in trotting because defects in action are more perceptible when trotting than when walking.

In trotting there should be a clean folding of the knee and hock, the feet being carried in a straight line. The hocks should work close together, for if they are carried too far apart it causes an unsightly bandy-legged appearance.

In many cases careful shoeing will improve the gait of the draft horse and tend to eliminate undesirable features.

Hogs

Every pen should be supplied with a box of air-slaked lime and wood-ashes, sulphur, charcoal and salt. The pigs seem to know when to take such correctives and naturally crave them.

A good way to begin in the hog business is to buy one or two sows that have already been mated to a good sire. You get results that way sooner, although it may cost a bit more than to buy pigs and grow them up to breeding age.

Now is the time to get ready for early spring litters. Make the farrowing pens now if new ones are needed—spring and the last day before farrowing is not the time. Then some cold makeshift may have to be used, and a lot of pigs will be lost.

What Impertinence!

The Scotch express had just reached the junction.

"All here for Edinburgh?" inquired the guard.

All replied in the affirmative except one old woman, who kept silence. After the train had started, however, she remarked, with a smile:

"I was just goin' to Glasgo mesel, but I wasna goin' to tell you inquesitive men!"

In These War Times you want real food that contains the greatest amount of body-building material at lowest cost. The whole wheat grain is all food. **Shredded Wheat Biscuit** is the whole wheat in a digestible form. Two or three of these little loaves of baked whole wheat with milk and a little fruit make a nourishing, strengthening meal.

Made in Canada.

From Erin's Green Isle

NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irishmen.

Sir Edward Carson has been on a visit to the western front, and was the guest of Sir Douglas Haig.

Mary McNamara was fined forty shillings at the Limerick Petty Sessions for having light weights in her shop.

The Cootehill Urban Council have decided to allow more light for public use this winter, and are relaying gas mains.

At a meeting of the citizens of Castlerea, it was decided to take steps at once to have the town lighted by electricity.

A large number of laborers have left the South of Ireland for England, where they have engaged for inland transport.

The death took place recently at Mayville, of Edward Egan, principal of the firm of John Egan and Son, of Waterford.

A tractor demonstration was given by a young lady from Dublin on the premises of The O'Connor Don, Clonalis, Castlerea.

The plot-holders of Toomovara have presented D. O'Shea, secretary of the Allotment Committee, with an address and a cheque.

Mrs. Walsh was awarded £300 at the Dungarvan Sessions against the Lux Navigation Company, for the loss of her husband.

The Derry Board of Guardians reported at their last meeting that there were twenty-one cases of scarlatina in the workhouse.

Two lodging-house keepers were fined £2 each at Armagh Petty Sessions for not supplying their lodgers with registration cards.

It is stated that German is the only language taught in a number of public schools in Oklahoma.

ORIGIN OF OLEOMARGARINE.

Butter Substitute First Invented at Order of Napoleon III.

It is interesting to note that war, which has been the deciding factor in inducing the Canadian authorities to allow the manufacture and sale of oleomargarine in this country, should have also been largely instrumental in establishing it firmly as an article of diet in Paris, and in general throughout France. The facts are these:

Emperor Napoleon III. was anxious to furnish the working classes of France with a substance which would serve the purpose of butter, have much the same properties of butter, yet be more cheaply produced. He therefore offered a prize for the discovery of such a substance. Chemists at once started experimenting, and at length a chemist working on the Imperial Farm at Vincennes produced a substance which so far met the requirements that he was awarded the coveted prize.

The inventor followed mechanically what he believed was the physiological process which took place when undefed cows produced the butterfat in their milk from the fat stored in their own bodies. He first reduced beef fat to small particles and placed it under heavy pressure, and then applied heat to it, of low temperature. This separated the stearin from the olein, through crystallization, the result being a fat free from taste and odor, and which melted readily in the mouth. Experiments proved that it was as nutritious as butter, and was capable of being kept for a longer period without becoming rancid.

Shortly after this discovery, in 1870, the Franco-Prussian war broke out, and ultimately Paris was besieged. Butter was soon at a premium, and later the supply ceased altogether. In its place large quantities of the new substitute, "oleomargarine" were manufactured, and it gained such a strong hold on the public that Paris alone consumes immense quantities every year. It required the great war to result in the introduction of this food into Canada.

SERIOUS ILLNESS AVOIDED

Many a serious illness has been avoided by the prompt use of Dr. Williams' Pink Pills. These pills actually enrich and purify the blood, and in this way build up the system, tone and strengthen the nerves and invigorate the vital organs.

Serious diseases generally come from some simple disorder that has been neglected. Therefore any thinning of the blood should be looked upon as a warning sign, and more serious illness should be avoided by the use of Dr. Williams' Pink Pills. In the case of young girls and women the blood is peculiarly liable to get out of order—to become thin and watery—and to lead to a general breakdown in health. This can be avoided by the occasional use of Dr. Williams' Pink Pills, which are suitable for the most delicate constitution. These pills will give you a new appetite, improve your digestion, tone and strengthen weakened nerves, banish depression and lack of energy, clear the complexion of pimples and blotches, cure pain in the back and general weakness, cause the disappearance of headaches, dizziness and heart fluttering. Give these pills a fair trial and you will soon note a wonderful change in your condition. Your spirits will brighten, good health and strength will return, and you will feel like a new person. You can confirm these statements by enquiring among your friends almost anywhere, as thousands and thousands of hopeless sufferers have been restored to new health and energy by using Dr. Williams' Pink Pills.

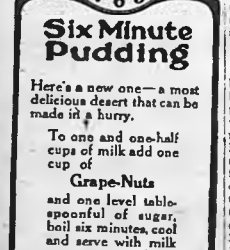
You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

FIRE AFFECTS ANIMALS.

Some Go Mad With Fear While Others Remain Cool in Danger.

Most animals are afraid of fire, and will fly from it in terror. To others there is a fascination about a flame, and they will walk into it, even though tortured by the heat.

A horse in a burning stable goes mad with fear, but a dog is as cool in a fire as at any time. He keeps his nose down to the floor, where the air is purest, and sets himself calmly to finding his way out. Cats in fire cry piteously. They hide their faces from the light and crouch in corners. When their rescuer lifts them they are as a rule quite docile and subdued, never biting or scratching.



Birds seem to be hypnotized by fire, and keep perfectly still; even the loquacious parrot in a fire has nothing to say. Cows, like dogs, do not show alarm. They are easy to lead forth and often find their way out themselves.

Pencils in Japan.

An unthought of result of the war has been the creation of a lead pencil industry in Japan. In 1911 Japan imported 65,000,000 pencils, most of which came from America and Germany. But with the opening of the European conflict German sources of supply were cut off and native manufacturers, who had been producing only in comparatively small quantities, seized their opportunity and made the most of it. In 1914 Japan exported over 9,000,000 lead pencils and in 1916 the number had increased to 158,000,000. There is strong indication that many of the markets won by the orientals will be held by them after the war, for they have the advantage of very cheap labor. Most of the lead which they use is imported from India and the United States.

Princess Eudoxia, of Bulgaria, is said to be the real ruler in that country.

The British Empire produces one-third of the world's coal, one-ninth of its copper, one-eighth of its iron, one-fifth of its lead, one-ninth of its silver, and one-half of its gold.

Six Minute Pudding

Here's a new one—a most delicious desert that can be made in a hurry.

To one and one-half cups of milk add one cup of

Grape-Nuts

and one level tablespoonful of sugar, boil six minutes, cool and serve with milk or cream. Add raisins if desired.

Get a package of Grape-Nuts from your grocer and try this pleasing recipe.

For the Chilly Days

Black-and-white checked worsted is used for this stunning street dress. McCall Pattern No. 8100. Ladies' Dress. Pattern in 6 sizes; 34 to 44 bust. Price, 20 cents.

Note the many smart features of this simple dress; the box-pleated tunic, surplice vests, long tight sleeves and the wide loose belt. McCall Pattern No. 8079, Ladies' Dress. In 6 sizes; 34 to 42 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Activities of Women.

Forty thousand women are working in the mines of Germany.

Several Holyoke College girls are working as drivers of milk wagons.

Kimura Komaka was the first woman to make suffrage speeches in Japan.

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard-white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

We can't expect our neighbors to say pleasant things about us if we are all the time growling about them. Every living thing likes to have the fur stroked the right way—even editors like it.

Minard's Liniment Cures Garget in Cows

The Elderly Safety-Pin.

The safety-pin and the hook and eye are generally supposed to be modern inventions. The former, in fact, has been credited to Queen Victoria. She may have improved upon it, but certainly she is not entitled to the distinction of having invented it. Numerous specimens of the useful contrivance have been found in the ruins of Crete. Some of them are in the museum of the University of Pennsylvania, and the museum has also a hook and eye from the same place. Both the safety-pins and the hook and eye now in the museum were made at least 900 years before Christ. Some are made of bronze, but amber or some other material was often used on the more elaborate pins. Some were even made of finely wrought gold.

Minard's Liniment Cures Diphtheria.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like magic every time.

The Egyptian goose is a small brightly colored goose kept for ornamental purposes and rarely seen in this country. It resembles the wild goose in shape and weighs two pounds less in each class.

Minard's Liniment Cures Distemper.

Pat Found a Way.

A Scotchman and an Irishman once set out together on a holiday, and Sandy entrusted all of his money to his friend with the strict injunction not to give him more than a stated sum for expenses each day.

After a few days Sandy pleaded for an increase, but in vain. Afterwards he confessed to Pat that, on the latter's refusal to comply with his wish, he got out of bed every night when the Irishman was asleep and searched for the cash, but could never succeed in finding it. "Where did you keep it?" he asked.

"Well," said Pat, "I let you go to bed first every night, and every night when you weren't looking I put my purse into one of your pockets. I was always first up in the morning, and took it out again."

Curiosity Aids Red Cross.

A farmer in a village in southeast England raised $1,000 for the Red Cross through the agency of a Zeppelin bomb which fell in one of his fields. Thousands of people came from nearby towns to see the crater, which is described as "big enough to put a house in." The farmer charged each visitor a small admission fee and turned the proceeds over to the local Red Cross.

Tomato and Cheese.—Take equal quantities of bread crumbs and tomatoes. Melt a little dripping in a saucepan and pour over the bread crumbs. Put a layer of cooked tomatoes in a baker, sprinkle over with bread crumbs, then with a layer of grated cheese. Then repeat and put enough bread crumbs to cover the cheese. Add a little salt and cayenne pepper. Put in the oven and heat until the cheese is melted.

MONEY ORDERS

Dominion Express Foreign Cheques are accepted by Field Cashiers and Paymasters in France for their full face value. There is no better way to send money to the boys in the trenches.

Cornmeal Bread.—2 cups lukewarm water, 1 yeast cake, ½ tablespoon salt, ½ cup molasses, 1 cup rye flour, 1 cup corn meal, 3 cups white flour. Dissolve yeast cake in water, add remaining ingredients, and mix thoroughly. Let rise to double its bulk, knead and shape into loaves; let rise again to double in bulk and bake.

ICE FOR THE TROPICS.

Practically Unknown in Tropical America Until Recent Years.

Ice which a few years ago was practically unknown to the people of tropical America, is now a necessity. Panama started the ball a-rolling by building ice-plants.

Until recently there were no ice plants in the Puerto Plata consular district, which comprises the northern half of the Dominican Republic. Now every town of 2,500 inhabitants or more has its ice plant.

Santiago de los Caballeros, with 15,000 inhabitants, the largest town in this region, has a ten ton plant which sells ice at $1 per hundred pounds at the factory and twenty-five cents additional delivered. The other towns, which range in population from 2,500 to 7,500, have ice plants of from one to three tons capacity. The prices of ice at these plants vary from $2 to $4 per hundred pounds and about 10 per cent. additional if delivered.

The principal consumers of ice are the cafes, clubs and hotels, but there is beginning to be a small demand for ice from private families. In view of the high price of ice and the growing prosperity of the country, it is suggested that it might be possible to induce some of the largest clubs, cafes and hotels to install their own plants and refrigerators.

A Cure for Bad Breath

"Bad breath is a sign of decayed teeth, foul stomach or unclean bowels." If your teeth are good, look to your digestive organs at once. Get Stuart's Curative Syrup at druggists. 15 to 30 drops after meals, clean up your food passages and stop the bad breath odor. 50c. and $1.00 Bottles. Do not buy substitutes. Get the genuine. 6

Hotpoint Electrical Appliances such as Tea Kettle, Teapot, Percolator, Stove, Foot Warmer, Heaters, Irons, Grills, Toasters, Table Stove, Chafing Dish, etc.

Sinclair's Hardware

"The Hardware Store of Better Values"

SECOND CON ELDERSLIE

D C Lillico, of Toronto, is spending a couple of weeks visiting his parents, Mr and Mrs A Lillico.

Mrs J Caldwell is at present under the doctor's care suffering from a complication of troubles.

Mr Geo Hope has sold his farm, lot 26, con 3, to Mr Pegelo, of 6th con Brant.

Mr and Mrs Robt Jeffkins visited Paisley friends recently.

Mr and Mrs A Lillico received word recently from their son, Pte Arch Lillico, that he has again been confined to the hospital with an attack of fever.

Lieut W T Wilson, of Mount Bridges, who was recently reported killed at the front, is a grandson of Mrs Wm Tully, a former resident of this con. Pte H Dalton, of Toronto, also reported killed, is a nephew of H McKindless, and was well known here.

Pte Russell McCullough, son of Mr and Mrs John McCullough, was home from Guelph on last leave for a few days recently. While here a number of friends and neighbors gathered one evening to bid him farewell and present him with a purse of money. John A McDonald read a nicely worded address, and Alex McGregor made the presentation. A short program consisting of addresses by J McCullough, Reeve Case, C Smellie and others, also several pieces of music, was called off by the chairman, A Young, and was enjoyed by all present. A nice lunch was served by the ladies and the remainder of the evening was spent in games and so on. Russell is one of our bright young lads who is risking his life for the benefit of his fellowmen, and his many friends here all hope he may be spared for a safe return home after he has done his bit for king and country.

GRESHAM

Mrs Alex Shipley, of the 10th con, was visiting her sister, Mrs Len Shipley, and other friends last week.

Mr Wm Parker made a business trip to Walkerton this week.

Mr Ernest Ross is at present driving a fine young carriage team.

Monday was a very busy day in our burg. Everybody having a vote to poll was out marking it off.

Mr Hugh Young has returned home after spending some time assisting at the store at Underwood.

We are sorry to report that Mr Metcalf is at present under the weather.

We are pleased to report that Mr Robt McKay, 6th con, is able to be out and around again. He has been under the care of Nurse Mawhinney.

Santa Claus will be along next week. A merry Christmas to all.

LOVAT

Mr and Mrs W J Ross celebrated the 25th anniversary of their wedding on Friday evening last by inviting about forty guests to their home, all but four of whom were family relatives. A very pleasant time was spent in the enjoyment of the supper, followed by music, cards, dancing and other entertainment. Mr and Mrs Ross were the recipients of a large number of silver gifts from the friends among whom they are held in high regard, accompanied by the best wishes of all for the future.

The late Christopher Metcalf, who passed away on Dec 16th, was an old resident of Greenock. He was born in Simcoe county, and to lot 12, con 16, over forty years ago. Since last spring he had not been in robust health, heart failure was the cause of his death. He was a bachelor, and is survived by three brothers—David, of Lovat, and two others in Simcoe.

Mr John Metcalf, of Simcoe, who came up to the funeral of his brother, was taken ill and is here at the home of his nephew, Mr John Metcalf.

GLAMIS

Pte Roddie Thomson, who has been overseas is expected home this week

Mr Jim McCormick, of Edmonton, is visiting his parents, Mr and Mrs McCormick.

Mrs Ross of Paisley Sundayed at the home of her brother Mr Jas Begg.

Mr John McKennit was one of the jury men at Assizes in Walkerton last week.

Mrs Gilchrist, Mrs jas Wrightson's mother, has been ill and under the Doctor's care.

Mrs Reith has been confined to the house some days with lagrippe.

A young daughter came to the home of Mr and Mrs James Coward, Toronto (nee Ella McKay)—Dorothy Maud.

The Memorial service that was to have been held in the Presbyterian church on Dec 9th in memory of the late Thomas Woods son of Mr David Wood was postponed on account of the storm and will be held on Dec 30th.

BORN

STEWART—In Greenock, on Dec 7th, to Mr and Mrs R W Stewart, a daughter

SMITH—In Bruce, on Dec 8th, to Mr and Mrs A J Smith, a son.

CAMPBELL—In Bentinck, on Dec 16th, to Mr and Mrs D A Campbell, 2nd con., a son—Alexander,

KENNEDY—In Bruce Tp., on Dec 14th, to Mr and Mrs Roy Kennedy, a son.

MARRIED

RUSHTON—BENNETT—At Grimsby, Ont., on Wednesday, Dec 5th, by Rev, I. A. McLachlan, President of the Hamilton Conference, Alma E., daughter of John Bennett, Port Elgin, Ont., to Thos E. Rushton, Port Elgin, Ont.

DIED

WOLFE—In Elderslie, on Dec 6th, Elizabeth Cowan, widow of the late John Wolfe, aged 78 years and 7 months.

McINTYRE—At Chicago, on Dec 13th, Alexander, third son of the late J C McIntyre and Mrs McIntyre, aged 45 years.

WALKERTON

Miss Tena Tanner, school-teacher who was taken ill with appendicitis at the home of her father, Mr Richard Tanner, east of Walkerton, was brought to the Bruce County Hospital and operated on for the malady this Thursday morning.

At present there is only one prisoner in the county jail and as he is an Austrian Pole who has become a permanent boarder for vagrancy, the chances of the jail running right out of inmates and the county being able to produce an entirely clean prison sheet is not likely, as long as he sticks round, to be an accomplished fact. However, prohibition and the war have kept the cells of the bastile pretty empty and have robbed the columns of the local press of many an exciting item. However, the papers can stand it, if the jail can.

Three gents from the Pinkerton district while driving to the Martin Hanson trial at Walkerton on Tuesday imbibed freely from a bottle of booze along the route. The chap who carried the moisture and who, it seems, played the good fellow with the stuff, had irrigated his own thirst to such an extent that he was in a badly intoxicated state when picked up by Chief Ferguson in town. A search of his raiment revealed a full flask of whiskey, while an empty quart bottle, which was also secreted in his clothes, bore evidence as to how well the bottle had been patronized. On being taken before Magistrates Tolton and Richardson in the Town Hall here on Tuesday afternoon the inebriated one told how the bottle had circulated among them on the way over. The result was that he was mulcted $200 and costs for having and drinking the booze in a public place, while his two associates, who were up listening to the Hanson trial were called out of the court room by the Chief and invited to the Town Hall, where they admitted before the magistrates to having sampled the tangle-foot on the way over and were assessed $200 and costs each for their sin against the booze act. The toll levied on the entire three will reach the respectable sum of $6..., of which over $600 will go into the town treasury.

Martin Hanson, who was sent up for trial by a magistrate's court in Walkerton on the charge of firing his wife's barn on her farm about half a mile west of Cargill in the early hours of Thursday, Aug 2nd, when the entire building, with some farm implements, about 16 tons of hay and about 25 hens was destroyed, appeared before the Quarter Sessions which opened at Walkerton on Tuesday afternoon. On coming before the Grand Jury a true bill was found against the prisoner in the arson case, while another charge that of forging the name of his son-in-law Henry Spitzig, to a note, was dismissed. After these preliminaries a petit jury was chosen and, with Judge Greig presiding the legal battle that was to decide the day opened with Crown Attorney Dixon, appearing for the prosecution and Lawyer Klien for the defence. The crown, after demonstrating that Hanson and his wife had had frequent quarrels, and that after the prisoner had turned over the farm to his wife and left, that strained relations had continued to exist, based its case on the trip that Hanson had taken on the night of the fire. It was shown that Hanson, who had been working in a factory in Hespeler, had bought a ticket for Cargill, but instead of getting off had gone on to Paisley, where after alighting from the night train he hired a rig from a livery-man, saying he wanted to drive to Robt Sheridan's in Greenock, which it seems is about 4½ miles from his old home. Arriving at Sheridan's according to Hanson's story he knocked loudly but could make no one hear. He then returned to Paisley, arriving between 1 and 2 a m. It was during his absence on this drive that the barn of his wife was discovered in flames, and it was on the suspicion that instead of driving to Sheriden's that he drove to his wife's place and in a spirit of revenge fired her barn that the Crown caused his arrest. The prosecution, however, were unable to connect him in any direct way with the crime and at the close of the case here on Wednesday morning, the judge held that there had not been sufficient evidence produced by the Crown to go before the Jury, and as a consequence he took the case out of their hands and dismissed the action.—Herald and Times.

AUCTION SALE

—OF—

Farm Stock and Implements

The undersigned has received instructions from James Cassidy, Lot 13, Con 2, Saugeen, to offer for sale by public auction on his premises, on

Thursday, Dec. 27th

The Actual Results —OF THE— DOMINION LIFE are unexcelled.

A Typical Case

The holder of Policy No. 21 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 13 per cent. in each of the years 6-10, by 28 per cent. in each of the years 11-15, by 40 per cent. in each of the years 16-20, and a reduction of 50 per cent. in the years 21-22. In the 22nd year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

Final Appeal Judge Gives Ruling on Exemption of Farmers

Mr. Justice Duff (the Final Court of Appeal) Declares it is Essential that there shall be No Diminution in Agricultural Production.

(Published by authority of Director of Public Information, Ottawa.)

Hon. Mr. Justice Duff gave judgment on December 6th, in the first test case brought before him, as Central Appeal Judge (the final court of appeal), for the exemption of a farmer. The appeal was made by W. H. Rowntree in respect of his son, W. J. Rowntree, from the decision of Local Tribunal, Ontario, No. 421, which refused a claim for exemption. The son was stated to be an experienced farm hand, who had been working on the farm continuously for the past seven years, and ever since leaving school. He lives and works with his father, who owns a farm of 150 acres near Weston, Ontario. With the exception of a younger brother, he is the only male help of the father on the farm. The father is a man of advanced years.

In granting the man exemption "until he ceases to be employed in agricultural labor," Mr. Justice Duff said:

"The Military Service Act does not deal with the subject of the exemption of persons engaged in the agricultural industry; and the question which it is my duty to decide is whether the applicant being and having been, as above mentioned, habitually and effectively engaged in agriculture and in labor essential to the carrying on of agricultural production, ought to be exempted under the provisions of the Military Service Act.

"These two propositions are indisputable:

"(1) In order that the military power of the allies may be adequately sustained, it is essential that in this country and under the present conditions, there should be no diminution in agricultural production.

"(2) The supply of competent labor available for the purpose of agricultural production is not abundant, but actually is deficient.

"The proper conclusion appears to be that the applicant, a competent person, who had been habitually and effectively engaged in labor essential to such production, ought not to be withdrawn from it.

"It is perhaps unnecessary to say that such exemptions are not granted as concessions on account of personal hardship, still less as a favor to a class. The sole ground of them is that the national interest is the better served by keeping these men at home. The supreme necessity (upon the existence of which, as its preamble shows, this policy of the Military Service Act is founded) that leads the State to take men by compulsion and put them in the fighting line requires that men shall be kept at home who are engaged in work essential to enable the State to maintain the full efficiency of the combatant forces, and whose places cannot be taken by others not within the class called out."

Ottawa, Dec. 8, 1917.
